# Watlow's Lead Time Options

To remain competitive in our fast-paced world, you need a supplier that is committed to helping you succeed. Watlow® shows its commitment through multiple options designed to get you what you need quickly.

Watlow understands that your heating requirements vary from application to application. To help meet your individual needs, Watlow offers several options to ensure you receive your product when you need it.

## **RAPID SHIP and Manufacturing Lead Times**

### ***RAPID SHIP***

Watlow's industry-leading RAPID SHIP offering is available throughout the catalog for various products. RAPID SHIP products are noted with "RS" and the RAPID SHIP logo. RAPID SHIP assures that your products will be manufactured and shipped from the factory the next business day.

Products not available as RAPID SHIP will be noted with an "M" which stands for Manufacturing lead times. In many instances Manufacturing lead times are just a few days longer than RAPID SHIP due to lower volumes, unique materials or other manufacturing complexities that must be considered when building your heaters. Contact your local sales representative to check the current lead times offered.

## **FAST TRACK™ for FIREROD® Heaters**

### ***FAST Track***

Watlow's FAST TRACK™ program for made-to-order FIREROD® cartridge heaters allows a range of FIRERODs to be shipped in two or five days.

With the FAST TRACK program, you can choose the size, voltage, wattage and termination from a predetermined set of options and choose when you want it – either a two- or five-day lead time.

For more information and applicable products, look for the FAST TRACK logo in the cartridge section of this catalog.

## Heating Solids

Heater Type	Application Description	Sheath Materials	Typical Max. Watt Densities		Max. Operating Temperatures		Catalog Page
			W/in <sup>2</sup>	W/cm <sup>2</sup>	°F	°C	
<b>Cartridge/ Insertion Heaters</b>	These heaters are inserted into a close fit hole (i.e. platens, dies and molds).	Alloy 800 Stainless steel	up to 400 up to 400	62.0 62.0	1400 1000	760 540	11
<b>Tubular Heaters</b>	These heaters are clamped to the object to be heated, usually exterior surfaces of tanks or other process vessels or fitted into milled grooves in a platen.	Flat: Alloy 800 Stainless steel Round: Alloy 800 Stainless steel	40 40 40 40	6.2 6.2 6.2 6.2	1400 1200 1600 1200	760 650 870 650	93 93 61 61
<b>Flexible Heaters</b>	These heaters are bonded or otherwise fastened to the part. Commonly used to heat irregular surfaces and shapes, or applications requiring distributed wattage or limited space.	Polyimide Silicone rubber	20 10	3.1 1.6	390 500	200 260	148 117
<b>High-Temperature Heaters</b>	MULTICELL™ heaters are loosely inserted into the platen hole for radiant heating. Can also be used in any static or dynamic non-contact application as a radiant heat source. Commonly used for extreme high temperature applications. Ceramic fiber heaters can be formed into an oversized chamber to surround the object being heated. Using radiant and convection heat transfer, ceramic fiber heaters are used in ovens and furnaces.	Alloy 600 Alloy 800 Molded ceramic fiber	60 60 30	9.3 9.3 4.6	2100 2100 2200	1150 1150 1205	425 433
<b>Specialty Heaters</b>	ULTRAMIC® advanced ceramic heaters are bonded or clamped to the object being heated. Thick film conduction heaters are clamped to the part being heated. Coil/Cable heaters can be formed to heat flat or curved surfaces, or wound around the object being heated. Typical applications include platen heating and plastic injection molding nozzles.	Aluminum nitride Dielectric glass on 430 stainless steel substrate Stainless steel or Alloy 600	1000 75 30	155 11.6 4.6	1112 1022 1200	600 550 650	459 463 467
<b>Strip/ Clamp-On Heaters</b>	These heaters are bolted or clamped to a surface (i.e. dies, molds, ovens). Often used for freeze and moisture protection.	Aluminized steel with refractory insulation Stainless steel with mineral insulation	100 140	15.5 21.7	1100 1400	595 760	481 477
<b>Band/ Barrel Heaters</b>	These heaters are clamped to cylindrical surfaces (i.e. extrusion barrels and nozzles).	Stainless steel with mineral insulation	100	15.5	1400	760	493
<b>Radiant Heaters</b>	These heaters are used in any static or dynamic, non-contact application where conduction or convection heating is not practical. Commonly used in laminating processes, thermoforming and paint drying.	Molded ceramic fiber Stainless steel emitter strip	20 30	3 4.6	2000 2200	1095 1200	518 514

# Heater Selection Matrix

## Heating Liquids/Surface Heating and Immersion

Heater Type	Application Description	Sheath Materials	Typical Max. Watt Densities		Max. Operating Temperatures		Catalog Page
			W/in <sup>2</sup>	W/cm <sup>2</sup>	°F	°C	
<b>Cartridge/Insertion Heaters</b>	These are used as an immersion heater placed either directly in the liquid, or in a protective well (recommended for immersion in water or 90 plus percent water soluble solutions).	Alloy 800	Up to 300 in water	46.5	212 in water	100	<a href="#">11</a>
<b>Tubular Heaters</b>	These heaters are immersed directly in the liquid being heated. Most commonly used when high kilowatts are required. Multiple style mounting adaptors, such as flanges and NPT fittings, provide excellent pressure boundaries.	Flat: Alloy 800	60	9.3	1400	760	<a href="#">93</a>
		Stainless steel	60	9.3	1200	650	<a href="#">93</a>
		Round: Alloy 800	60	9.3	350	180	<a href="#">61</a>
		Stainless steel	60	9.3	1600	870	<a href="#">61</a>
		Steel	60	9.3	1200	650	<a href="#">61</a>
		Steel	60	9.3	750	400	<a href="#">61</a>
<b>Flexible Heaters</b>	These heaters are applied to the surface of a pipe vessel containing a liquid (well suited for curved surfaces and irregular shaped objects; frequently used for freeze protection).	Polyimide	20	3.1	390	200	<a href="#">148</a>
		Silicone rubber	10	1.6	500	260	<a href="#">117</a>
<b>Immersion Heaters</b>	FIREBAR® heaters have multiple elements mounted in a flange or screw plug fitting. They are immersed directly in a fluid or in a protective well.	Alloy 800	Up to 100  Up to 100	15.5	212 in water	100	<a href="#">165</a>
	WATROD™ heaters have multiple elements mounted in a flange or screw plug fitting. These are immersed directly in a fluid or in a protective well.	Alloy 800 316 stainless steel Steel		15.5	212 in water 1400 in air	100  760	<a href="#">165</a>
<b>Circulation Heaters</b>	Tubular heaters have multiple elements mounted in a screw plug or ANSI flange fitting and placed in a vessel through which fluid is passed. FIREBAR or WATROD elements may be utilized.	Round: Alloy 800	60	9.3	1600	870	<a href="#">331</a>
		Stainless steel	60	9.3	350	180	
		Steel	60	9.3	1200	650	
		Steel	60	9.3	750	400	
<b>Fluid Delivery Heaters</b>	FREEFLEX® heaters have polymeric heated tubing, used to maintain temperature in medical applications where heated flexible tubing is required.	Polyimide	72 W/ft	22 W/m	212	100	<a href="#">385</a>
	Syringe heaters are formed to fit a cylindrical part. They are often used in medical applications for heating contrast media and often incorporate a sensor and on-board system.	Lexan Silicone rubber	2 3	0.31 0.47	185 428	85 220	<a href="#">388</a>
<b>High-Temperature Heaters</b>	Ceramic fiber assembled heaters can be used in a chamber surrounding the tank, vessel, crucible or bath. Radiant and convection heat transfer heat the load.	Molded ceramic fiber	30	4.6	2200	1205	<a href="#">433</a>
<b>Specialty Heaters</b>	Coil/Cable heaters that are wrapped or wound around pipe or vessel containing a liquid can be used, or used directly as an immersion heater. They are often used in applications with space limitations (i.e. photo processing equipment, scientific instruments and heat tracing).	Stainless steel or Alloy 600	30	4.6	1200	650	<a href="#">467</a>
<b>Strip/Clamp-On Heaters</b>	These heaters are bolted or clamped to the wall of a tank or vessel. They are used in food warming and other applications offering a flat mounting surface.	Aluminized steel with refractory insulation	100	15.5	1100	595	<a href="#">481</a>
		Stainless steel with mineral insulation	140	21.7	1400	760	<a href="#">477</a>
<b>Band/Barrel Heaters</b>	These heaters are clamped to cylindrical surfaces and are most commonly used to heat liquids flowing through pipes as freeze protection.	Stainless steel with mineral insulation	100	15.5	1400	760	<a href="#">493</a>

# Heater Selection Matrix

## Heating Gases

Heater Type	Application Description	Sheath Materials	Typical Max. Watt Densities		Max. Operating Temperatures		Catalog Page
			W/in <sup>2</sup>	W/cm <sup>2</sup>	°F	°C	
<b>Cartridge/ Insertion Heaters</b>	These heaters are mounted in pipes or vessels through which gases pass. They can be placed in protection tubes, making access and wiring easier.	Alloy 800 or stainless steel	100	15.5	Contact Watlow		11
<b>Tubular Heaters</b>	These heaters have multiple elements mounted in an array and placed in a duct or vessel through which gases pass. Flat tubular elements can be modified with the addition of fins to increase surface area.	Flat: Alloy 800 Stainless steel Round: Alloy 800 Alloy 600	30 30 30 30	4.6 4.6 4.6 4.6	1400 1200 1600 1800	760 650 870 980	237
<b>Flexible Heaters</b>	These heaters are applied to the surface of a pipe or vessel containing gases. They are well suited for curved surfaces and irregular shaped objects. Excellent for use in enclosures.	Polyimide Silicone rubber	5 5	0.8 0.8	390 500	200 260	148 117
<b>Circulation Heaters</b>	Tubular heaters have multiple elements mounted in a screw plug or ANSI flange fitting and placed in a vessel through which fluid is passed. FIREBAR or WATROD elements may be utilized.	Flat: Alloy 800 304 stainless steel Round: Alloy 800 Alloy 600	30 30 30 30	4.6 4.6 4.6 4.6	1400 1200 1600 1800	760 650 870 980	331
<b>Air Heaters</b>	Duct heaters have multiple elements placed in a duct through which gases pass. Enclosure heaters prevent freezing and condensation in electrical and mechanical housings. Finned FIREBAR heaters have aluminized steel fins attached to a FIREBAR element. They are used for forced air heating and radiant heating in drivers, ovens and duct work. Finned Strip have aluminized steel fins attached to a 375 heater. They are used for air heating, freeze protection and load bank resistors.	Alloy 800 Stainless steel Aluminum Stainless steel Aluminized steel	20 to 30 15 5 Up to 50 30	3 to 4.6 2.3 0.8 7.7 4.7	1400 1200 150 1200 1100	760 650 66 650 595	391 417 419 112 409
<b>High-Temperature Heaters</b>	MULTICELL heaters have multiple elements placed in a duct or vessel through which gases pass. Designs are also available to heat a pass tube externally to isolate gas from the element. Excellent for use in high temperature/high pressure applications. Ceramic fiber heaters are used to construct chambers and furnaces through which gases are passed. Heaters function as high-temperature radiant heaters surrounding transfer pipes or other special vessels.	Alloy 600 Alloy 800 Molded ceramic fiber	60 60 30	9.3 9.3 4.6	2100 2100 2200	1150 1150 1205	425 433
<b>Specialty Heaters</b>	Coil/Cable heaters are situated or wound into coils, which can be inserted into a pipe or vessel to heat flowing air or gases. Cable heaters readily lend themselves to applications where space is restricted.	Stainless steel or Alloy 600	30	4.6	1200	650	467

# Cartridge/Insertion Heaters

## FIREROD® Cartridge Heaters

The Watlow® FIREROD® cartridge heater incorporates engineering excellence and is supported by almost 60 years of solid industry performance across a broad range of simple and complex applications. As the premier choice in swaged cartridge heating, thousands of industrial manufacturers continue to choose Watlow as their trusted thermal partner and certified cartridge heater supplier.

Built using premium materials and tight manufacturing controls, the FIREROD heater provides superior heat transfer, uniform temperatures, resistance to oxidation and corrosion and a long life even at high temperatures. Every system component that leaves our manufacturing facilities meets our strict quality assurance specifications, in addition to those set forth by leading standards and regulating industries.

To meet our customer's individual needs, there are many delivery options available for FIREROD heaters.

### Performance Capabilities

- Part temperatures up to 1400°F (760°C) on alloy 800 sheath
- Watt densities up to 400 W/in<sup>2</sup> (62 W/cm<sup>2</sup>)
- Maximum voltage up to 480V

### Features and Benefits

#### Nickel-chromium resistance wire

- Ensures even and efficient distribution of heat to the sheath

#### Conductor pins

- Provide a metallurgical bond to the resistance wire
- Ensure a trouble-free electrical connection

#### Magnesium oxide insulation of specific grain and purity

- Results in high dielectric strength and contributes to faster heat-up

#### Alloy 800 sheath

- Resists oxidation and corrosion from heat, many chemicals and atmospheres

#### Minimal spacing between the element wire and sheath

- Results in lower internal temperature
- Accommodates a design with fewer or smaller heaters operating at higher watt densities

#### International Organization for Standardization (ISO) 9001 certified

- Provides confidence that quality and reliability expectations are met

### UL® and CSA approved flexible stranded wires

- Lead insulation rated to temperatures up to 480°F (250°C)

### Patented lead adapter (LA) method

- Allows same day shipment on more than 150,000 configurations of stock FIREROD heaters and lead combinations

### Typical Applications

- Semiconductor chamber heating
- Semiconductor wire and die bonding
- Freeze protection and deicing of equipment in cold climates or applications
- Humidity control
- Patient comfort heating used in medical devices
- Mold die and platen heating
- Seal bars used in packaging equipment
- Test sample heating in gas chromatography equipment

# Cartridge/Insertion Heaters

## FIREROD Cartridge Heaters

### Applications and Technical Data

#### Tolerances

##### Diameter

- 1 in. (25 mm) units:  $\pm 0.003$  in. ( $\pm 0.08$  mm)
- All other units:  $\pm 0.002$  in. ( $\pm 0.05$  mm)

##### Sheath Length

- All units up to 4 $\frac{1}{2}$  in. (114 mm) long:  $\pm \frac{3}{32}$  in. ( $\pm 2.4$  mm)
- $\frac{1}{8}$  in. diameter units over 4 $\frac{1}{2}$  in. (114 mm) long:  $\pm 3\%$
- All other units over 4 $\frac{1}{2}$  in. (114 mm) long:  $\pm 2\%$

##### Length Measurements

###### Pin Style and Potted FIRERODs

###### PTFE - Swaged-in Leads FIRERODs

#### Wattage

- $\frac{1}{8}$  in. units: +10%, -15%
- All other units: +5%, -10%

#### Resistance

- $\frac{1}{8}$  in. units: +15%, -10%
- All other units: +10%, -5%

Resistance changes with temperature. There are three circumstances under which resistance can be measured:

1. Room temperature (before use): nominal ohms are 90% of Ohm's law calculation.
2. Room temperature (after use): nominal ohms are 95% of Ohm's law calculation.
3. At temperature (during use): depending on application nominal ohms are approximately 100% of Ohm's law.

**Note:** Resistance and wattage values are approximate depending on application conditions.

#### Component Recognition File Numbers

- UL<sup>®</sup> component rated to 240VAC (file number E52951)
- CSA component rated to 240VAC (file number LR7392)
- VDE component rated to 240VAC (file number 10062-4911-0006)

**Note:** Not all options or combinations of options are covered. UL<sup>®</sup>, CSA, VDE and CE marking is available upon request.

# Cartridge/Insertion Heaters

## FIREROD Cartridge Heaters

### Applications and Technical Data

#### Dimensional Data

This table shows minimum/maximum sheath lengths for available FIREROD diameters.

FIREROD Diameter			Length			
Nominal in.	Actual in.	(mm)	Min. in.	(mm)	Max. in.	(mm)
1/8	0.122	(3.1)	7/8	(22.2)	12	(305)
1/4	0.246	(6.3)	7/8	(22.2)	36	(915)
3/8	0.371	(9.4)	7/8	(22.2)	48	(1220)
1/2	0.496	(12.6)	7/8	(22.2)	60	(1520)
5/8	0.621	(15.8)	1	(25.0)	72	(1830)
3/4	0.746	(18.9)	1	(25.0)	72	(1830)
1	0.996	(25.3)	1 1/4	(32.0)	72	(1830)

Indicates **recommended** maximum sheath length; however, longer lengths may be available.

#### Camber

Camber is defined as the maximum deviation of the heater's centerline from straight. FIREROD camber within allowable tolerances is verified via passage through a cylindrical gauge of specified length and diameter. Normally, slight camber does not present a problem since the heater will flex enough to fit into a straight, close-fit hole.

#### Camber Measurement

#### Allowable Camber Versus Length

Max. camber = 0.020 in. x (length in feet)<sup>2</sup> or 0.005 in., whichever is greater.

# Cartridge/Insertion Heaters

## FIREROD Cartridge Heaters

### Applications and Technical Data (Continued)

#### Electrical Data

The table below will assist you in selecting the correct FIREROD heater for your application, according to available voltage, amperage and wattage.

Please note, some combinations of minimum and maximum wattages are not available on the same heater diameter. If your application exceeds the limitations shown, contact your Watlow representative.

FIREROD Diameter in.	Volts Max.	Ampere Max. <sup>①</sup>	Min. Watts @ 120V <sup>③</sup> Heater Length			Max. Watts				
			1 in. (25 mm)	1 1/2 in. (38 mm)	2 in. (50 mm)	120V 1-phase	240V 1-phase	480V 1-phase	240V 3-phase	480V 3-phase
1/8	240	3.1	—	8	5	360	720	—	—	—
1/4	240	4.4 <sup>②</sup>	100	55	40	525	1050	—	—	—
3/8	240	6.7	65	35	25	800	1600	—	—	—
1/2	240	9.7	40	25	20	1160	2320	—	—	—
5/8	480	23.0	35	20	15	2760	5520	11,000	⑤	⑤
3/4	480	23.0	30	15	10	2760 <sup>④</sup>	5520	11,000	9550	19,100
1 <sup>⑦</sup>	480	23.0	—	15	10	2760 <sup>④</sup>	5520	11,000	9550 <sup>④</sup>	19,100 <sup>④</sup>

Number Of Circuits <sup>⑥</sup>		
Diameter in.	1-phase	3-phase
3/4	3	1
1	5	2

- ① Determined by the current carrying capacity of internal parts and lead wire. Alternate material may be available.
- ② For 1/4 in. (6 mm) units with thermocouple maximum amperage is 3.1A.
- ③ Determined by the limitation of space for resistance winding. For minimum wattage of 240VAC multiply value by four.
- ④ Higher wattages are available using more than one set of power leads. Multiply the wattage from the table by the applicable factor.
- ⑤ Contact your Watlow representative for data.
- ⑥ On 3/4 in. (19 mm) diameter units, either three single-phase circuits or one three-phase delta or wye circuit is available. On 1 in. (25 mm) diameter units, either five single-phase or two three-phase delta circuits are available.
- ⑦ A minimum charge per line item applies.

# Cartridge/Insertion Heaters

## FIREROD Cartridge Heaters

### Maximum Allowable Watt Density

The following four charts detail maximum allowable watt densities for applications that use metal, steam, air or gas heating. Please review the charts and applicable data to determine the correct watt density for your application.

### Correction Factors

These graphs depict FIRERODs used in steel parts, therefore, for stainless steel, aluminum or brass, refer to applicable correction factors:

1. For stainless steel, enter the graph with a fit 0.0015 in. (0.04 mm) larger than actual fit.
2. For aluminum and brass, enter the graph with a temperature 100°F (38°C) above actual temperature.

### Heating Metals

The *Maximum Watt Density— Heating Metals* chart will display the maximum hole fit or recommended watt density of the heater. Enter the chart with either known variable, part-fit-in-hole dimension or W/in<sup>2</sup>. Then, find the application temperature by reading up or over on the chart.

If the fit of the heater in the hole dimension is not known, it can be easily determined. Subtract the minimum diameter of the FIREROD (nominal diameter minus tolerance) from the maximum hole diameter. For example, the hole fit is 0.006 in. (0.15 mm) for a hole diameter of 0.500 in. (13 mm) minus a heater diameter of 0.496 in. (12.6 mm) ±0.002 in. (0.05 mm). For FIREROD heaters in square holes or grooves, contact your Watlow representative for the fit in hole dimension.

Fit in hole = maximum hole I.D. minus minimum heater O.D.

# Cartridge/Insertion Heaters

## FIREROD Cartridge Heaters

### Maximum Allowable Watt Density (Continued)

#### Watt Density vs. Ambient Air Temperature

The *Watt Density vs. Ambient Air Temperature* graph shows the maximum allowable watt density when one FIREROD is operated in air or similar gas.

For FIRERODs grouped in a single row, with no less than one diameter between elements, multiply value from the graph by 0.95. When a reflector is placed behind the heaters, multiply the maximum allowable watt density value from the graph by 0.85.

#### Sheath Temperature in Ambient Air

The *Sheath Temperature in Ambient Air* graph indicates the watt density required to bring a pre-oxidized FIREROD to a given sheath temperature when operated in 70°F (21°C) ambient air.

At 44 W/in<sup>2</sup> (6.8 W/cm<sup>2</sup>), the sheath temperature is 1450°F (784°C). At this temperature, a one-year life is expected if cycling is not too frequent.

Higher temperatures result in reduced heater life.

#### Watt Density in Moving Air

The *Watt Density in Moving Air* graph shows the maximum allowable watt density of a FIREROD in moving air.

The air movement is expressed in feet per minute (FPM). If the air flow is known in cubic feet per minute (CFM), divide the CFM by the net-free area around the heater (ft<sup>2</sup>). The net-free area is the total area of the enclosure minus the area occupied by the heater.

## FIREROD Cartridge Heaters

### Lead Adapter (LA)

#### Options

#### Patented LA Modification Method

The lead adapter (LA) modification process is a powerful tool for providing a wide range of finished heater configurations very quickly. The LA process allows the base FIREROD heater to be modified into a multitude of configurations. The base FIREROD heater can be selected to meet customers' individual needs. The base heater can then be customized by adding various finishing options like lead length, lead protection, flanges, locating rings and right-angle constructions.

## FIREROD Cartridge Heaters

### LA

#### Termination Options

#### LA Swaged-in Flexible Leads

LA swaged-in flexible leads are used in applications where a high degree of flexing exists or the leads must be bent sharply adjacent to the heater without exposing or breaking the conductor. The stranded wire leads are connected internally and exit through the lead end. The overall length of the heater is extended by 1/4 in. (6 mm). To order, specify **length adder code E** bringing the total lead end no-heat to 1/2 in. (13 mm).

This LA option is not available on 1/8 in. (3 mm) diameter FIRERODS. On 1/8 in. (3 mm) diameter FIRERODS, leads are connected externally using a solid conductor lead wire. If stranded wire is desired on 1/8 in. (3 mm) diameter units, contact your Watlow representative.

#### No-Heat Extensions

No-heat extensions are recommended in applications where leads may be exposed to excessive heat and require a cooler lead end. They are also used when heat is not required along the entire length of the FIREROD.

No-heat extensions are available for most LA options in diameters of 3/8, 1/2, 5/8 and 3/4 in. (10, 13, 16 and 19 mm). These extensions are designed to provide a total no-heat length of 1, 1 1/2, 2 or 2 1/2 in. (25, 38, 51 or 65 mm) at the lead end of FIRERODS only. Contact your Watlow representative for available LA options.

#### LA PTFE Seal and Leads

The LA PTFE seal and leads protect the heater against moisture/contamination from lubricating oil, cleaning solvents, plastic material or fumes and organic tapes. This seal is effective to 392°F (200°C) under continuous operation.

Please note when ordering this option, that a minimum no-heat section is required to allow for construction. Additional no-heat may be required to keep the seal below effective temperatures. The minimum lead end no-heat required is 1 in. (25 mm). The LA cap adds 3/4 in. (19 mm) to the overall length of the heater. To order, specify **option code T**.

#### LA Silicone Rubber Seal and Leads

The LA silicone rubber seal and leads protect the heater against moisture and contamination from lubricating oil, cleaning solvents, plastic material, fumes and organic tapes. This seal is effective to 302°F (150°C) under continuous operation.

Please note when ordering this option, that a minimum no-heat section is required to allow for construction. Additional no-heat may be required to keep the seal below effective temperatures. The minimum lead end no-heat required is 1 in. (25 mm). The LA cap adds 3/4 in. (19 mm) to the overall length. To order, specify **option code P**.

# Cartridge/Insertion Heaters

## FIREROD Cartridge Heaters

### LA

#### Termination Options *(Continued)*

#### LA Straight Stainless Steel Hose

An LA straight stainless steel hose provides the best protection against abrasion from sharp edges. It also offers ease of handling and wiring in abrasive environments. Unless specified a 12 in. (305 mm) hose is supplied. Leads are 2 in. (51 mm) longer than the hose but, longer leads are available.

The minimum lead end no-heat required is  $\frac{3}{4}$  in. (19 mm). This option adds  $\frac{1}{2}$  in. (13 mm) to the overall length. To order, specify **option code H**.

#### LA Straight Stainless Steel Hose with PTFE Leads and Seal

An LA straight stainless steel hose with PTFE leads and seal is the ultimate combination for providing abrasion protection and a moisture resistant seal. Unless specified, a standard 12 in. (305 mm) hose is supplied. Leads are 2 in. (51 mm) longer than the hose, but longer leads are available. This seal is effective up to 392°F (200°C) under continuous operation.

The minimum lead end no-heat required is 1 in. (25 mm). This option adds  $\frac{3}{4}$  in. (19 mm) to the overall length. To order, specify **option code G**.

#### LA Straight Stainless Steel Braid

The LA straight stainless steel braid is designed to protect leads from abrasion against sharp edges. It is the most flexible Watlow protective lead arrangement.

Unless specified, a 12 in. (305 mm) braid is supplied. Leads are 2 in. (51 mm) longer than the braid, but longer leads are available.

The minimum lead end no-heat required is  $\frac{3}{4}$  in. (19 mm). This option adds  $\frac{1}{2}$  in. (13 mm) to the overall length. To order, specify **option code C**.

#### LA Straight Stainless Steel Braid with PTFE Leads and Seal

The LA straight stainless steel braid with PTFE leads and seal is Watlow's most flexible lead protection with a moisture resistant seal. Unless specified, a 12 in. (305 mm) braid is supplied. Leads are 2 in. (51 mm) longer than the braid, but longer leads are available. This seal is effective up to 392°F (200°C) under continuous operation.

The minimum lead end no-heat required is 1 in. (25 mm). This option adds  $\frac{3}{4}$  in. (19 mm) to the overall length. To order, specify **option code F**.

# Cartridge/Insertion Heaters

## FIREROD Cartridge Heaters

### LA

#### Right Angle Options

#### LA Right Angle Leads

LA right angle leads are used in applications with a high degree of flexing and when space limitations are critical. Stranded lead wires are connected internally (swaged-in) and exit at a 90 degree angle at the end of the heater.

To order, specify **option code R**.

Minimum No-Heat Required in. (mm)					
Dia.	1/4	3/8	1/2	5/8	3/4
In. (mm)	13/16 (21)	3/4 (19)	13/16 (21)	13/16 (21)	13/16 (21)

To order right angle leads with PTFE leads and seals, specify **option code B**.

#### LA Right Angle Stainless Steel Hose

The diameter of the right angle extension is equal to the nominal diameter of the heater.

An LA right angle stainless steel hose is provided for wiring convenience. Like the LA straight stainless steel hose, it protects leads from abrasion against sharp edges. Unless specified, a 12 in. (305 mm) hose is supplied. Leads are 2 in. (51 mm) longer than the hose, but longer leads are available.

Diameter	3/8	1/2	5/8	3/4
Adder length in. (mm)	3/4 (19)	3/4 (19)	3/4 (19)	7/8 (22)
Min. no-heat in. (mm)	1 (25)	1 (25)	1 (25)	1 1/8 (29)

To order specify **option code W**.

**Note:** This option is not available on 1/4 in. (6 mm) diameter.

#### LA Right Angle Stainless Steel Hose with PTFE Leads and Seal

The diameter of the right angle extension is equal to the nominal diameter of the heater.

An LA right angle stainless steel hose with PTFE leads and a seal is the ultimate combination for providing abrasion protection and a moisture resistant seal with wiring convenience. Unless specified, a 12 in. (305 mm) hose is supplied. Leads are 2 in. (51 mm) longer than the hose but longer leads are available. This seal is effective to 392°F (200°C) under continuous operation.

The minimum lead end no-heat required is 1 1/2 in. (38 mm). This option adds 1 1/4 in. (32 mm) to overall length on stock units.

To order, specify **option code M**.

**Note:** This option is not available on 1/4 in. (6 mm) diameter.

# Cartridge/Insertion Heaters

## FIREROD Cartridge Heaters

### LA

#### Right Angle Options (Continued)

#### LA Right Angle Stainless Steel Braid

The diameter of the right angle extension is equal to the nominal diameter of the heater.

An LA right angle stainless steel braid is provided for wiring convenience. It protects leads from abrasion against sharp edges.

Unless specified, a 12 in. (305 mm) braid is supplied. Leads are 2 in. (51 mm) longer than the braid, but longer leads are available.

Diameter	3/8	1/2	5/8	3/4
Adder length in. (mm)	3/4 (19)	3/4 (19)	3/4 (19)	7/8 (22)
Min. no-heat in. (mm)	1 (25)	1 (25)	1 (25)	1/8 (3)

To order, specify **option code Y**.

**Note:** This option is not available on 1/4 in. (6 mm) diameter.

#### LA Right Angle Stainless Steel Braid with PTFE Leads and Seal

The diameter of the right angle extension is equal to the nominal diameter of the heater.

The LA right angle stainless steel braid with PTFE leads and seal is Watlow's most flexible lead protection with a moisture resistant PTFE seal and wiring convenience. Unless specified, a 12 in. (305 mm) braid is supplied. Leads are 2 in. (51 mm) longer than the braid, but longer leads are available. This seal is effective up to 392°F (200°C) under continuous operation.

The minimum lead end no-heat required is 1 1/2 in. (38 mm). This option adds 1 1/4 in. (32 mm) to the overall length on stock units.

To order, specify **option code A**.

**Note:** This option is not available on 1/4 in. (6 mm) diameter.

## Mounting Options

### LA Stainless Steel Threaded Fittings

Fitting overlaps the unheated section and is silver soldered to the sheath.

Threaded fittings allow fast, water-tight installation of the heater into a threaded hole. These fittings are 304 stainless steel, other stainless steel alloys are available upon request. Double threaded fittings are also available.

Please see page 33 for threaded fitting specifications.

Provide the location of the fittings if no-heat extension option is requested.

Lead Arrangement	Minimum Distance <sup>①</sup> Between Threaded End and Lead End in. (mm)
Crimped Leads	1/4 (6)
Swaged-in Leads	5/16 <sup>②④</sup> (8)
STR SS Hose	1/2 <sup>③</sup> (13)
STR SS Braid	1/2 (13)
PTFE Seal & Leads	7/8 (22)
Silicone Seal & Leads	7/8 (22)

① The location of the threaded fitting from the thread end of the fitting to the lead end of the heater.

All optional fitting locations are available only with LA no-heat extensions. Contact your Watlow representative for details.

② On 1/4 in. diameter FIREROD only "A" dimension is 7/16 in. (11.1 mm).

③ On 1/4 in. diameter FIREROD only "A" dimension is 5/8 in. (15.9 mm).

④ On 5/8 in. and 3/4 in. the fitting is located at 7/8 in. from the lead end using a 3/4 in. no-heat extension. In order to locate at 5/16 in., the fitting must be epoxied.

**Note:** Minimum distance between threaded end and heated section is 1/4 in.

# Cartridge/Insertion Heaters

## FIREROD Cartridge Heaters

### LA

### Mounting Options

#### Flanges

Stainless steel flanges are a convenient mounting method to position a heater within an application. The flange is staked on and located  $\frac{1}{4}$  in. (6 mm) from the lead end. The flange can be located up to  $2\frac{1}{4}$  in. (57 mm) from the lead end if it is over a no-heat section. Use this option in combination with most LA configurations.

To order, specify **flange**, size and locations.

#### Flange Specifications

FIREROD Diameter in.	Flange Size	in. (mm)		
		D	C	H
$\frac{1}{4}$ , $\frac{3}{8}$ , $\frac{1}{2}$	FS	1 (25)	$\frac{3}{4}$ (19)	0.144 (4)
$\frac{1}{4}$ , $\frac{3}{8}$ , $\frac{1}{2}$ $\frac{5}{8}$ , $\frac{3}{4}$	FM	$1\frac{1}{2}$ (38)	$1\frac{1}{8}$ (29)	0.156 (4)
$\frac{5}{8}$ , $\frac{3}{4}$	FL	2 (51)	$1\frac{1}{2}$ (38)	0.201 (5)

#### Locating Ring

A stainless steel locating ring can be used as a retaining collar to position a FIREROD if mounting requirements are not critical.

For LA, specify the location if the no-heat extension option is requested. On FIRERODs with crimped on leads without the LA option, the locating ring will be located on the last  $\frac{1}{4}$  in. (6 mm).

To order, specify **locating ring**.

#### Locating Ring Specifications

Diameter	$\frac{1}{4}$	$\frac{3}{8}$	$\frac{1}{2}$	$\frac{5}{8}$	$\frac{3}{4}$
Ring O.D. in. (mm)	$\frac{1}{2}$ (13)	$\frac{5}{8}$ (16)	$\frac{3}{4}$ (19)	$\frac{7}{8}$ (22)	1 (25)

# Cartridge/Insertion Heaters

## FIREROD Cartridge Heaters

### LA

#### Mineral Insulated (MI) Leads

MI leads handle both high temperatures and contamination, and resist other problems including abrasion and excessive vibration. The metal seal and swaged-in formable MI cable leads can handle temperatures up to 1500°F (815°C). The lead end seal resists moisture and other forms of contamination, including gases, oils, plastic drool, solvents and water.

This LA option is also available as a manufactured item. Specify MI leads and seal, as well as volts, watts, cable length, lead length and type. Unless specified, 6 in. (152 mm) of MI cable and 12 in. (305 mm) of PTFE leads will be supplied. To order, specify **option code J**.

**Note:** A minimum charge per line item applies.

#### Benefits

- Increases heater life
- Minimizes down time
- Resists moisture contamination
- Allows a cartridge heater to be used where it was not previously possible
- Resists abrasion and vibration
- Forms and bends to fit the contours of wiring raceways
- Protects against high temperatures without additional insulation

#### Typical Applications

- Vacuum forming
- Plastic molding
- Medical device manufacturing
- Food handling equipment
- Zinc die-casting

#### Technical Data

Max. temp. of cable: 1500°F (815°C)

Max. temp. of cable to lead transition: 300°F (149°C)  
(where flexible leads attach to cable)

Cable sheath material: 304 SS

Conductor material: nickel

Max. voltage: 240V

Transition length: 1<sup>1</sup>/<sub>8</sub> in. (28.6 mm)

#### Lead Types

PTFE 392°F (200°C) – T

LA options are available for all FIRERODs, except the 1/8 in. diameter size. To order any of these options, please build the order number by specifying the Watlow part number, length adder code, option code and lead length.

**Ordering Example:** The order number **J12A89-N72W74** indicates an order for a 12 in. (305 mm) FIREROD with 72 in. (1830 mm) right angle stainless steel hose and 74 in. (1880 mm) leads. The overall heater length equals 12 3/4 in. (324 mm).

**Note:** No-heat extensions are available for most LA options in diameters of 3/8, 1/2, 5/8 and 3/4 in. Contact your Watlow representative for available LA options.

To order any of these dimensions, please specify the applicable length adder code shown.

### Lead Type Codes

Type	Maximum Temperature	Option Code
GGS	482°F (250°C)	None
MGT	842°F (450°C)	H
PTFE	392°F (200°C)	T

**Note:** Available for LA fiberglass leads.

### No-Heat Length Adder Codes

No-Heat Option in. (mm)	Length Adder Code
3/4 (19)	N
1 1/4 (32)	1E
1 3/4 (44)	1N
2 1/4 (56)	2E

## Modifying Basic FIRERODs Using the LA Process for Swaged-in Leads

Watlow:

- Shortens conductor pins
- Welds lead wires to pins
- Places an LA cap over the lead end of the heater
- Reduces the diameter of the LA cap over the lead end of the base unit to produce a rugged integrated heater assembly

**Notes:**

- Other LA construction options use a similar modification process
- Maximum temperature of LA cap is 1000°F (538°C)

## Length Tolerance for Stock Heaters With LA Options

**Note:** Base stock heater tolerance + LA cap tolerance = total tolerance for assembly

# Cartridge/Insertion Heaters

## FIREROD Cartridge Heaters

### Non-Lead Adapter (LA)

#### Modification Coding

Watlow offers heaters in various diameters, lengths and volt-wattage combinations that are ready for shipping. Basic modifications can be made and heaters are shipped the same day. Modifications include flanges, threaded fittings, locating rings, ceramic beads and crimped on leads. Following is a list of all available non-LA mounting and pin option codes.

#### Mounting Option Codes

- BA - Small flange FS (available on  $\frac{1}{4}$ ,  $\frac{3}{8}$  and  $\frac{1}{2}$  in.)
- BB - Medium flange FM (available on  $\frac{1}{4}$ ,  $\frac{3}{8}$ ,  $\frac{1}{2}$ ,  $\frac{5}{8}$  and  $\frac{3}{4}$  in.)
- BC - Large flange FL (available on  $\frac{5}{8}$  and  $\frac{3}{4}$  in.)
- BD - Locating ring (available on  $\frac{1}{4}$ ,  $\frac{3}{8}$ ,  $\frac{1}{2}$ ,  $\frac{5}{8}$  and  $\frac{3}{4}$  in.)
- BG - Single stainless steel fitting
- BH - Double stainless steel fitting
- BY - Stainless steel reversed

#### Pin Option Codes

- AA - Short pins  $\frac{3}{8}$  in. (10 mm)
- AB - Medium pins  $\frac{5}{8}$  in. (16 mm)
- AC - Long pins  $1\frac{3}{4}$  in. (45 mm)
- AD - Stagger pins
- AE - Ceramic beads  $\frac{1}{2}$  in. (13 mm)
- AF - Ceramic beads  $\frac{3}{4}$  in. (19 mm)
- AG - Ceramic beads 1 in. (25 mm)
- AH - Ceramic beads  $1\frac{1}{4}$  in. (32 mm)
- AJ - Ceramic beads  $1\frac{1}{2}$  in. (38 mm)

## FIREROD Cartridge Heaters

*Made-to-Order*

### Straight Options

#### Swaged-in Flexible Leads

Swaged-in flexible leads are used in applications where a high degree of flexing exists or leads must be bent sharply adjacent to the heater without exposing or breaking the conductor. Stranded wire leads are connected internally and exit through the lead end. Lead wire type is high temperature fiberglass. The maximum temperature of the standard fiberglass end piece is 842°F (450°C). Unless specified, 12 in. (305 mm) leads are supplied.

The minimum lead end for no-heat is 1 in. (25 mm) min. or 12 percent of overall heater length. Additional no-heat may be required to keep the end piece and leads below the maximum operating temperatures.

#### PTFE Seal and Leads

A PTFE seal and leads protect the heater against moisture and contamination from cleaning solvents, plastic material, fumes and organic tapes. This seal is effective up to 392°F (200°C) under continuous operation. The PTFE seal and leads have a minimum lead end unheated section of 1 in. (25 mm). Additional no-heat may be required to keep the seal below its maximum operating temperature.

#### Straight Stainless Steel Hose

A straight stainless steel hose provides the best protection against abrasion from sharp edges. It also offers ease of handling and wiring in abrasive environments.

Unless specified, a 12 in. (305 mm) hose is supplied. Leads are 2 in. (51 mm) longer than the hose.

**Note:** This option is available with PTFE leads and seal. Minimum no-heats are longer. Contact your Watlow representative for details.

#### Straight Stainless Steel Braid

A straight stainless braid is designed to protect leads from abrasion against sharp edges and is Watlow's most flexible protective lead arrangement.

Unless specified, a 12 in. (305 mm) braid is supplied. Leads are 2 in. (51 mm) longer than the braid.

**Note:** This option is available with PTFE leads and seal. Minimum no-heats are longer. Contact your Watlow representative for details.

# Cartridge/Insertion Heaters

## FIREROD Cartridge Heaters

### Made-to-Order

### Right Angle Options

#### Right Angle Leads

Right angle leads are used in applications with a high degree of flexing and when space limitations are critical. Standard lead wires are connected internally (swaged-in) and exit at a 90° angle at the end of the heater.

Diameter	1/4	3/8	1/2	5/8	3/4
Min. no-heat in. (mm)	1 1/4 (32)	1 1/4 (32)	1 5/16 (33)	1 7/16 (37)	1 7/16 (37)

**Note:** This option is available with PTFE leads and seal. Minimum no-heats are longer. Contact your Watlow representative for details.

#### Right Angle Stainless Steel Hose

**The diameter of the right angle extension is equal to the nominal diameter of the heater.**

A right angle stainless steel hose is provided for wiring convenience. It protects leads from abrasion against sharp edges.

Unless specified, a 12 in. (305 mm) hose is supplied. Leads are 2 in. (51 mm) longer than the hose.

Diameter	1/4	3/8	1/2	5/8	3/4
Min. no-heat in. (mm)	1 5/16 (33)	1 3/8 (35)	1 9/16 (40)	1 11/16 (43)	1 13/16 (46)

**Note:** This option is available with PTFE leads and seal. Minimum no-heats are longer. Contact your Watlow representative for details.

#### Right Angle Stainless Steel Braid

**The diameter of the right angle extension is equal to the nominal diameter of the heater.**

A right angle stainless steel braid is provided for wiring convenience. It protects leads from abrasion against sharp edges.

Unless specified, a 12 in. (305 mm) hose is supplied. Leads are 2 in. (51 mm) longer than the hose.

Diameter	1/4	3/8	1/2	5/8	3/4
Min. no-heat in. (mm)	1 5/16 (33)	1 3/8 (35)	1 9/16 (40)	1 11/16 (43)	1 13/16 (46)

**Note:** This option is available with PTFE leads and seal. Minimum no-heats are longer. Contact your Watlow representative for details.

# Cartridge/Insertion Heaters

## FIREROD Cartridge Heaters

### Made-to-Order

### Termination Options

#### Silicone Rubber Seal and Leads

Made-to-order silicone rubber seal and leads protect the heater against moisture and contamination from lubricating oil, cleaning solvents, plastic material, fumes and organic tapes. This seal is effective up to 302°F (150°C) under continuous operation.

Silicone rubber seal and leads for made-to-order units greater than 10 in. (250 mm) long comprise a minimum no-heat section of approximately 12 percent of the overall length. Longer no-heat sections are available if required.

#### Epoxy Seal

Epoxy seals help protect the heater against moisture and contamination from lubricating oil, cleaning solvents, plastic material, fumes and organic tapes. These seals are effective up to 250°F (121°C) under continuous operation.

Epoxy seals can be ordered only on units greater than 1/8 in. (3 mm) in diameter with crimped on leads. The minimum no-heat section at the lead end is 1 in. (25 mm). Longer no-heat sections are available upon request.

To order, specify **epoxy seal**.

#### Ground Lead

Ground leads are a safety feature to protect both workers and equipment. This configuration is not available on all options. Contact your Watlow representative for additional information. To order, specify **ground lead**.

#### Post Terminals

Post terminals provide a quick, secure connection with ring or fork connectors or bus bars. Threaded 6-32 studs are soldered to the solid power pins. Nuts and washers are provided.

Post terminals are available on FIREROD heaters of 5/8, 3/4 and 1 in. (16, 19 and 25 mm) diameter. On 1 in. (25 mm) diameters, pins are straight. To order, specify **post terminals**.

#### UL® Listed Plugs

UL® listed plugs are a safe, convenient installation method, especially when frequent connection or disconnection is required. These plugs have a nylon dead front, a molded-in cord grip and straight or Twist-Lock® blades with or without ground.

Use UL® listed plugs with a stainless steel hose, conduit, braid or lead wires with sleeving. To order, specify **UL® listed plugs**.

#### Ceramic Bead Insulation

Ceramic bead insulation protects the leads from high ambient temperatures above 842°F (450°C).

The beads fit over solid conductors that extend to reach a cooler area where flexible wires can be attached.

This option is not available on 1/8 in. (3 mm) diameter leads. The maximum available length on FIRERODs is 12 in. (305 mm). To order, specify **ceramic beads** and length, and additional lead length.

# Cartridge/Insertion Heaters

## FIREROD Cartridge Heaters

### Made-to-Order

### Options

#### Passivation

During the manufacturing and handling of stainless steel, particles of iron or tool steel may embed in the sheath. If they are not removed, particles may corrode and produce rust spots. In critical sheath contact applications for the medical industry, passivation will remove free iron from the sheath. To order, specify **316L stainless steel sheath** and **passivation**.

**Note:** A minimum charge per line item applies.

#### Thermocouple Types

ASTM Code	Conductor Characteristics		Temperature Range °F (°C)
	Positive	Negative	
J	Iron (Magnetic) (White)	Constantan (Non-Magnetic) (Red)	0 to 1400 (-20 to 760)
K	Chromel® (Non-Magnetic) (Yellow)	Alumel® (Magnetic) (Red)	0 to 2300 (-20 to 1260)

For other ISA types, contact your Watlow representative.

#### Style A

#### Style B

#### Style C

#### Individually Controlled Heat Zones

Individually controlled heat zones offer the flexibility to control temperature by zones, along the length of the FIREROD heater. This is an advantage for heating requirements of certain applications, such as seal bars. This internal construction can be ordered on 5/8, 3/4 and 1 in. (16, 19 and 25 mm) diameter FIREROD heaters. To order, specify **individually controlled heat zones** and wattage and length per zone.

**Note:** A minimum charge per line item applies.

#### Internal Thermocouple

Style A internal thermocouples can be used to evaluate heat transfer efficiency of an application. This measurement can help to cut energy costs and increase heater life. The ungrounded junction is located in the heater core to monitor the internal temperature of the heater.

The Style B internal thermocouple provides a good approximation of part temperature and is located anywhere along the length of the heater. Due to variations in production, this style may be grounded or ungrounded.

This junction is located adjacent to the inside heater sheath in the center of the heated section unless otherwise specified. A 1/2 in. (13 mm) unheated section is required.

A Style C internal thermocouple is useful in applications where material flows past the end of the heater, as in plastic molding. This grounded junction is embedded in a special end disc. Unless requested, the disc end is not mechanically sealed.

To order, specify **internal thermocouple, Style A, B or C** and **thermocouple ASTM Type J or K**.

If not specified, 12 in. (305 mm) thermocouple leads are supplied.

#### Availability

All styles are available on all diameters with the exception of 1/8 in. (3.2 mm) diameter, which is available only with Style C, and 1 in. (25 mm) which is available only with Style A and B.

# Cartridge/Insertion Heaters

## FIREROD Cartridge Heaters

*Made-to-Order*

### Options

#### Distributed Wattage

Distributed wattage varies the watt density along the length of the heater. This construction technique compensates for heat losses along the edges of heated parts and is ideal for seal bar applications.

To order, specify **distributed wattage** and give the length and wattage for each section.

**Note:** A minimum charge per line item applies.

#### Dual Voltage

When the FIREROD requires the flexibility of operating on two voltages, dual voltage internal construction should be used. Dual voltage is not compatible for all lead options. Contact your Watlow representative for availability. To order, specify **dual voltage** and voltage requirements.

**Note:** A minimum charge per line item applies.

#### Centerless Grinding

Centerless grinding can be used to furnish precision diameters to permit closer heater-to-part fit allowing higher watt densities to be used.

For centerless ground heaters, the heater must have PTFE seal and leads (maximum 12 in. (305 mm) lead length) or crimped on leads. Longer lead lengths are available, but require an external connection. The length of a FIREROD available for centerless grinding depends on the construction. Please contact your Watlow representative for assistance. To order, specify **centerless grinding**.

FIREROD Diameter in.	Actual Precision Diameter in.
1/4	0.241 ± 0.0005
3/8	0.363 ± 0.0005
1/2	0.488 ± 0.0005
5/8	0.613 ± 0.0005
3/4	0.738 ± 0.0005
1 <sup>①</sup>	0.984 ± 0.0005

<sup>①</sup>A minimum charge per line item applies.

#### Bolt Heaters

The high performance FIREROD can be upgraded with a conduit box and wooden handle.

When inserted into a hollow bolt, this heater lengthens the bolt by heat expansion allowing the nut to be further wrench-tightened. The FIREROD bolt is then de-energized and removed. Upon cooling, the bolt contracts to a tight fit.

#### Performance Capabilities

- Part temperatures up to 1000°F (540°C)
- Maximum watt density up to 100 W/in<sup>2</sup> (15.5 W/cm<sup>2</sup>)

FIREROD Bolt Specifications

# Cartridge/Insertion Heaters

## FIREROD Cartridge Heaters

Made-to-Order

### Mounting Options

#### Threaded Fittings

Threaded fittings allow fast, water-tight heater installation into a threaded hole. Standard fittings are 304 stainless steel and welded to the heater sheath. Other materials are available upon request. Double threaded fittings are also available.

Unless specified, the fitting hex is located flush with the lead end.

#### Threaded Fittings Specifications

Heater Diameter in.	Pipe Thread Size (NPTF) in. (mm)	Single Thread Fitting Length in. (mm)	Double Thread Fitting Length in. (mm)
1/4	1/8 (3)	1/2 (13)	7/8 (22)
3/8	1/4 (6)	5/8 (16)	1 <sup>5</sup> / <sub>16</sub> (49)
1/2	3/8 (10)	3/4 (19)	1 <sup>3</sup> / <sub>8</sub> (35)
5/8	1/2 (13)	7/8 (22)	1 <sup>13</sup> / <sub>16</sub> (46)
3/4	3/4 (19)	1 (25)	1 <sup>13</sup> / <sub>16</sub> (46)
1	1 (25)	1 (25)	1 <sup>1</sup> / <sub>2</sub> (38)

#### Flanges

Stainless steel flanges are a convenient mounting method and can be used to position a heater within an application. The standard location is 1/4 in. (6 mm) from the lead end. However, a specific location may be requested in any location along the no-heat section. Unless specified, flanges are staked to the sheath.

To order, specify **flange size** and location.

#### Flange Specifications

FIREROD Diameter in.	Flange Size	D in. (mm)	C in. (mm)	H in.
1/8, 1/4, 3/8, 1/2	FS	1 (25)	3/4 (19)	0.144
1/4, 3/8, 1/2, 5/8, 3/4	FM	1 <sup>1</sup> / <sub>2</sub> (38)	1 <sup>1</sup> / <sub>8</sub> (28)	0.156
5/8, 3/4, 1	FL	2 (51)	1 <sup>1</sup> / <sub>2</sub> (38)	0.201

#### Locating Rings

A stainless steel locating ring can be used as a retaining collar to position a FIREROD heater if mounting requirements are not critical. Standard locating rings are staked to the heater sheath.

To order, specify **locating ring** and location.

#### Locating Ring Specifications

Diameter - in.	1/4	3/8	1/2	5/8	3/4
Ring O.D. in. (mm)	1/2 (13)	5/8 (16)	3/4 (19)	7/8 (22)	1 (25)

# Cartridge/Insertion Heaters

**EXTENDED  
CAPABILITY**

## Extended Capabilities For Custom Cartridge Heaters

Special cartridge heaters can be engineered and designed to meet the most difficult applications and the highest quality standards. From nuclear power plants to open heart surgeries, Watlow cartridge heaters with extended capabilities are exceeding customer expectations. For more than 80 years, emphasis on sound engineering and quality control has established Watlow as a preferred supplier for many high-performance heating requirements. For large opportunities, a solution for you can be engineered to accommodate:

- Custom diameters
- High watt density applications
- Long heater lengths
- Low current leakage constructions
- Special testing and inspection
- Non-destructive testing: x-ray, helium leak tests and start up verification
- Integrated thermostats
- Value added integration of the Watlow heater into a sub-assembly
- Complete documentation packages: approval drawings, material traceability, inspection traceability and other compliance documents.

**High Performance Cartridge Heaters**

Watlow has developed a wide range of heaters and assemblies to meet requirements for the most demanding applications. Watlow can engineer and manufacture heaters with low leakage constructions, integrated temperature controls or limits and unique customer hardware and connectors.

**Nuclear Pressurizer Heaters**

Watlow has provided specialized heaters to the nuclear industry for more than 40 years. Watlow pressurizer heaters are highly reliable and manufactured to meet the exacting standards of the nuclear industry.

# Cartridge/Insertion Heaters

**EXTENDED  
CAPABILITY**

## Extended Capabilities For FIREROD Cartridge Heaters

### Made-to-Order

#### Termination Options

##### Low Electrical Leakage

This construction technique minimizes current leakage of the heating element. It is especially useful in critical medical applications where low set point ground fault interrupts are used.

Low electrical leakage is available on 3/8, 1/2, 5/8 and 3/4 in. (10, 13, 16 and 19 mm) diameter FIREROD heaters.

To order, specify **low electrical leakage**.

##### SJO Cord

SJO cord is used in low temperature applications where lead wires require protection against moisture or when UL® listed plugs are needed. This cord is limited to 140°F (60°C) under continuous operation.

FIREROD heaters greater than 10 in. (250 mm) have a minimum no-heat section of approximately 12 percent + 1/4 in. (6 mm) of the overall length.

To order, specify either **two conductor or three conductor** as well as **overall length**.

##### Terminal Box

A 4 in. (100 mm) NEMA 1 octagonal terminal box is mounted on a flange or a threaded fitting. Boxes have 1/2 in. (13 mm) conduit knockouts for electrical connection.

Hazardous location (NEMA 4 and NEMA 7) terminal boxes are also available. Contact your Watlow representative for details. Terminal boxes are available on 1/2 in. (13 mm) through 1 in. (25 mm) diameter FIREROD heaters.

To order, specify **terminal box** and **NEMA type**.

#### Options

##### Bent FIREROD

In applications where leads must exit at an angle, a bend can be made in the unheated section only. Heated sections may be on either side of the bend. It is recommended that the heater be bent at the Watlow factory.

A 304 stainless steel sheath is used on bent FIREROD heaters. If the sheath temperature exceeds 1000°F (540°C), contact your Watlow representative.

See dimensions noted on the chart or contact your Watlow representative if application needs exceed limitations shown.

FIREROD Diameter in.	Min. Required No-Heat Length in. (mm)	Bend Radius in. (mm)
1/4	2 1/4 (56)	1/2 (13)
3/8	2 3/8 (60)	1/2 (13)
1/2	2 7/8 (72)	3/4 (19)
5/8	3 5/16 (83)	1 (25)
3/4	3 13/16 (98)	1 1/4 (32)

#### Mounting Options

##### Brass Threaded Fittings

Threaded fittings allow fast, water-tight installation of the heater into a threaded hole. Double threaded fittings are also available.

Please see page 33 for threaded fitting specifications.

# Cartridge/Insertion Heaters

**EXTENDED  
CAPABILITY**

## Extended Capabilities For High-Temperature (HT) FIREROD® Heaters

The Watlow HT FIREROD heater is especially designed for high temperature platen applications up to 1600°F (871°C). The HT FIREROD heater utilizes the same industry leading design principles used on all Watlow FIREROD products. Advancing the FIREROD heater enables it to withstand application temperatures up to 400°F (204°C) higher than standard cartridge heaters.

HT FIREROD design features, which are important in high temperature applications, include:

- A specially constructed end seal that is virtually airtight to reduce the effects of resistance wire oxidation
- A high-temperature sheath that is treated to improve its emissivity for better heat transfer

### Performance Capabilities

- Platen temperatures up to 1600°F (871°C)
- Maximum watt density up to 100 W/in<sup>2</sup> (15.5 W/cm<sup>2</sup>)
- Maximum voltage up to 277VAC ground
- Length tolerance of +0, -4 percent standard diameters; +0, -8 percent for special diameter

### Made-to-Order Availability

Nominal Diameter in.	Actual Diameter in.	Max. Amperes
1/2	0.496 ± 0.004	10
5/8	0.580 ± 0.004	23
	0.621 ± 0.004	23
3/4	0.710 ± 0.004	46
	0.746 ± 0.004	46
1	0.960 ± 0.004	46
	0.996 ± 0.006	46

Contact your Watlow representative for special diameter requests.

### Features and Benefits

#### High-temperature seal

- Reduces exposure to the atmosphere, which minimizes oxidation of the winding wires resulting in longer element life

**Note:** The first 2 in. (51 mm) must be outside of the platen in free air and less than 1000°F (538°C).

#### Alloy 800 sheath

- Transfers heat more efficiently

#### High emissivity sheath

- Provides better heat transfer and longer life

\* First 2 in. (51 mm) at lead end must be kept below 1000°F (538°C).

### Typical Applications

- Thermo plastic
- Super plastic forming of titanium aircraft parts
- Diffusion bonding to laminate and shape titanium

## Extended Capabilities For High-Temperature (HT) FIREROD Heaters

### Applications and Technical Data

#### Options

- Thermocouples
- Independently controllable heat zones
- Distributed wattage
- Flanges
- Post terminals
- Conduit NEMA boxes
- Bent FIREROD

To consider the HT FIREROD for your application, use the recommended *Maximum Watt Density graph* shown.

# Cartridge/Insertion Heaters

## Metric FIREROD Cartridge Heaters

The Watlow FIREROD not only sets the industry standard for cartridge heaters, but continues to make improvements in construction and design. Among those improvements is the metric FIREROD, a variation of the FIREROD cartridge heater built to meet the exact specifications of the global market.

Like its counterpart, the metric FIREROD consistently outperforms other cartridge heaters with its design solutions such as its exclusive resistance wire winding and swaging process. These processes bring the resistance wire closer to the sheath and compacts the MgO insulation to maximize heat transfer. The end result is longer service life and better efficiency.

### Performance Capabilities

- Part temperatures up to 760°C (1400°F) on alloy 800 sheath
- Watt densities up to 50 W/cm<sup>2</sup> (330 W/in<sup>2</sup>)

### Features and Benefits

#### Nickel-chromium resistance wire

- Assures even and efficient distribution of heat to the sheath because the wire is precisely wound and centered in the heater

#### Conductor pins

- Ensures a trouble-free electrical connection because of the metallurgical bond between the conductor pins and resistance wire

#### Magnesium oxide insulation of specific grain and purity

- Results in high dielectric strength and contributes to faster heat-up

#### Alloy 800 sheath

- Resists oxidation and corrosion from many chemicals, heat or atmospheres

#### Minimal spacing between the element wire and sheath

- Results in lower internal temperature
- Accommodates a design with fewer or smaller heaters operating at higher watt densities

#### UL® and CSA approved flexible stranded wires

- Insulates the wires to temperatures of 250°C (480°F)

### Typical Applications

- Semiconductor chamber heating
- Semiconductor wafer lead connection
- Semiconductor wire and die bonding
- Freeze protection and deicing of equipment in cold climates or applications
- Humidity control
- Patient comfort heating used in medical devices
- Mold die and platen heating
- Seal bars used in packaging equipment
- Test sample heating in gas chromatography equipment

# Cartridge/Insertion Heaters

## Metric FIREROD Cartridge Heaters

### Applications and Technical Data

The *Electrical Data* table will assist you in selecting the correct metric FIREROD heater for your application, according to available voltage, amperage and wattage.

#### Electrical Data

Heater Diameter (mm)	6.5	8	10	12.5	16	20
Nominal Diameter (in.)	0.256	0.315	0.394	0.492	0.630	0.787
Max. Voltage	250	250	250	400	480	480
<b>Crimped on Leads</b>						
Max. Amperes	7.2	7.2	16.1	16.1	21	21
Max. Wattage @ 230V	1650	1650	3700	3700	4830	4830
Max. Wattage @ 400V				6440	8400	8400
<b>Swaged-in Leads</b>						
Max. Amperes	5.2/7.2 <sup>①</sup>	5.2/7.2 <sup>①</sup>	12.6	12.6	12.6/21 <sup>①</sup>	21
Max. Wattage @ 230V	1190/1650	1190/1650	2890	2890	2890/4830	4830
Max. Wattage @ 400V	—	—	—	5040	5040/8400	8400

<sup>①</sup>On certain lead constructions, maximum amperes are 5.2 or 12.6. In these instances, amperes are determined by internal construction and current carrying capacity of internal parts to the lead wire. For more information about these amperes restrictions or higher current requirements, please contact your Watlow representative.

### Tolerances

**Diameter:** -0.02 mm, -0.08 mm (-0.0008 in., -0.0031 in.)

**Length:** ±2% with ±2.4 mm (±<sup>3</sup>/32 in.) min.

**Wattage:** +10%, -5%, wattage decreases approximately 5% with temperature. Wattage tolerances are for heaters at operating temperature.

**Resistance:** +5%, -10%, resistance is measured at room temperature following first heater operation.

**Camber:** 0.25 mm (0.01 in.) max. on any length to 300 mm (12 in.). For lengths over 300 mm:

$$\frac{[\text{Heater Length (mm)}]^2}{182,900}$$

# Cartridge/Insertion Heaters

## Metric FIREROD Cartridge Heaters

### Maximum Allowable Watt Density

The following four graphs detail maximum allowable watt densities for applications involving metal heating or steam, air and gas heating. Please review these respective graphs and applicable data to determine the correct watt density for the application.

### Heating Metals

The *Maximum Watt Density—Heating Metals* graph will show either the maximum hole fit or recommended watt density of the heater. Enter the chart with either known variable, part fit in hole dimension or watt density. Then, find the application temperature by reading up or over on the chart.

If the fit of the heater in the hole dimension is not known, it is easily determined. Subtract the minimum diameter of the metric FIREROD (nominal diameter minus tolerance) from the maximum hole diameter. For example, take a hole diameter of 16.1 mm minus a heater diameter of 16 mm - 0.08 mm. The hole fit would be 0.18 mm. For metric FIREROD heaters in square holes or grooves, contact your Watlow representative for fit in hole dimension.

### Correction Factors:

Also note, the *Maximum Watt Density—Heating Metals* graph depicts metric FIRERODs used in steel parts. Therefore, for either stainless steel, aluminum or brass, refer to applicable correction factors <sup>①</sup> and <sup>②</sup>.

<sup>①</sup> For SS, enter the graph with a fit 0.04 mm (0.0015 in.) larger than actual.

<sup>②</sup> For aluminum and brass, enter the graph with a temperature 55°C (100°F) above actual temperature.

# Cartridge/Insertion Heaters

## Metric FIREROD Cartridge Heaters

### Maximum Allowable Watt Density (Continued)

#### Watt Density vs. Ambient Air

The *Watt Density vs. Ambient Air Temperature* graph shows the maximum allowable watt density when one metric FIREROD heater is operated in air or similar gas.

For metric FIRERODs grouped in a single row, with no less than one diameter between elements, multiply value from graph by 0.95. When a reflector is placed behind the heaters, multiply the maximum allowable watt density value from the graph by 0.85.

#### Sheath Temperature in Ambient Air

The *Sheath Temperature in Ambient Air* graph indicates the watt density required to bring a metric FIREROD heater to a given sheath temperature when operated in 20°C (70°F) ambient air.

At 7 W/cm<sup>2</sup> (44 W/in<sup>2</sup>), the sheath temperature will be 790°C (1450°F). At this temperature, one year of heater life would be expected, provided cycling is not too frequent. Higher temperatures would result in reduced heater life.

#### Watt Density in Moving Air

The *Watt Density in Moving Air* graph gives the maximum allowable watt density of a metric FIREROD heater in moving air.

If the volumetric flow rate of air is known in m<sup>3</sup>/s (or CFM), divide this value by the net free area in m<sup>2</sup> (or ft<sup>2</sup>) around the heater to determine air flow velocity. The net free area is the total area of the enclosure minus the area occupied by the heater.

# Cartridge/Insertion Heaters

## Metric FIREROD Cartridge Heaters

### Termination Options

#### Swaged-in Flexible Leads

Swaged-in flexible leads, with silicone-fiberglass insulation, are recommended for applications in which the leads must be bent at the exit point from the heater. Unless longer length is specified, 250 mm (10 in.) leads are supplied.

Heaters 150 mm (6 in.) or shorter generally have a 6 mm (1/4 in.) no-heat section. Heaters up to 250 mm (10 in.) require a 25 mm (1 in.) no-heat section. Heaters greater than 250 mm may require more than a 25 mm no-heat section. To order, please specify **swaged-in flexible leads**.

#### Right Angle Leads

Right angle leads are used in applications with a high degree of flexing and when space limitations are critical. Lead wires exit at a 90° angle through the side of the heater sheath. Right angle tube may be necessary on certain constructions. To order, specify **right angle leads** and lead length.

Metric FIREROD Diameter mm	Min No-Heat Length mm (in.)
6.5	15 (9/16)
8.0	15 (9/16)
10.0	17 (2/3)
12.5	18 (11/16)
16.0	20 (3/4)
20.0	21 (13/16)

#### Stainless Steel Braid

A stainless steel braid is designed to protect leads from abrasion against sharp edges. It is the most flexible of Watlow's protective lead arrangements.

When the leads exit straight out, the braid is swaged into the no-heat section of the heater. When the leads exit at a right angle, a crimp connector is used to attach the braids.

Unless otherwise specified, leads are 250 mm (10 in.) and the braid is 200 mm (8 in.) long. To order, specify either **straight or right angle stainless steel braid**, lead length and no-heat section.

Metric FIREROD Diameter mm	Min. No-Heat Length	
	Straight mm (in.)	Right Angle mm (in.)
6.5	30 (1 1/8)	N/A
8.0	30 (1 1/8)	15 (9/16)
10.0	30 (1 1/8)	17 (2/3)
12.5	30 (1 1/8)	18 (1 1/16)
16.0	30 (1 1/8)	20 (3/4)
20.0	30 (1 1/8)	21 (1 3/16)

# Cartridge/Insertion Heaters

## Metric FIREROD Cartridge Heaters

### Termination Options (Continued)

#### Stainless Steel Hose

Stainless steel hose provides the best protection against abrasion from sharp edges or abrasive equipment. It also offers ease of handling and wiring in abrasive environments.

When the leads exit at a right angle to the heater, the hose is silver soldered to the sheath. Unless otherwise specified, leads are 250 mm (10 in.) long and the hose is 200 mm (8 in.) long. To order, specify **stainless steel hose**, lead length and no-heat section.

Metric FIREROD Diameter mm	Min. No-Heat Length		SS Hose O.D. mm (in.)
	Straight mm (in.)	Right Angle mm (in.)	
6.5	30 (1 <sup>1</sup> / <sub>8</sub> )	N/A	4.7 (3 <sup>1</sup> / <sub>16</sub> )
8.0	30 (1 <sup>1</sup> / <sub>8</sub> )	15 (9 <sup>1</sup> / <sub>16</sub> )	5.7 (7 <sup>1</sup> / <sub>32</sub> )
10.0	30 (1 <sup>1</sup> / <sub>8</sub> )	17 (2 <sup>1</sup> / <sub>3</sub> )	7.6 (3 <sup>1</sup> / <sub>10</sub> )
12.5	30 (1 <sup>1</sup> / <sub>8</sub> )	18 (1 <sup>1</sup> / <sub>16</sub> )	9.5 (3 <sup>7</sup> / <sub>8</sub> )
16.0	30 (1 <sup>1</sup> / <sub>8</sub> )	20 (3 <sup>1</sup> / <sub>4</sub> )	12.7 (1 <sup>1</sup> / <sub>2</sub> )
20.0	30 (1 <sup>1</sup> / <sub>8</sub> )	21 (1 <sup>3</sup> / <sub>16</sub> )	15.8 (5 <sup>7</sup> / <sub>8</sub> )

#### PTFE Seal and Leads

PTFE seal and leads protect the heater against moisture and contamination from lubricating oil, cleaning solvents, plastic material or fumes and organic tapes. This seal is effective to 200°C (400°F) under continuous operation.

Please note, when ordering this option, that a 25 mm (1 in.) minimum no-heat section is required to allow construction. Additional no-heat area may be required to keep the seal below effective temperatures. To order, specify **PTFE seal and leads** and lead length.

#### Galvanized Conduit

Galvanized conduit equals stainless steel hose in its abrasion protection.

The conduit is attached with a 90° elbow copper coupler, which overlaps the heater sheath. Unless specified, 200 mm (8 in.) conduit is supplied, leads are 50 mm longer than the conduit. To order, specify **galvanized conduit**, lead length and no-heat section.

Metric FIREROD Diameter mm	Min. No-Heat Length mm (in.)	Dimension A mm (in.)	Dimension B mm (in.)	Galvanized Conduit O.D. mm (in.)
6.5	12 (7 <sup>1</sup> / <sub>16</sub> )	22 (7 <sup>7</sup> / <sub>8</sub> )	29 (1 <sup>1</sup> / <sub>8</sub> )	10 (3 <sup>7</sup> / <sub>8</sub> )
8.0	12 (7 <sup>1</sup> / <sub>16</sub> )	22 (7 <sup>7</sup> / <sub>8</sub> )	29 (1 <sup>1</sup> / <sub>8</sub> )	10 (3 <sup>7</sup> / <sub>8</sub> )
10.0	12 (7 <sup>1</sup> / <sub>16</sub> )	22 (7 <sup>7</sup> / <sub>8</sub> )	29 (1 <sup>1</sup> / <sub>8</sub> )	10 (3 <sup>7</sup> / <sub>8</sub> )
12.5	12 (7 <sup>1</sup> / <sub>16</sub> )	28 (1 <sup>1</sup> / <sub>8</sub> )	30 (1 <sup>3</sup> / <sub>16</sub> )	14 (1 <sup>1</sup> / <sub>2</sub> )
16.0	12 (7 <sup>1</sup> / <sub>16</sub> )	28 (1 <sup>1</sup> / <sub>8</sub> )	34 (1 <sup>5</sup> / <sub>16</sub> )	14 (1 <sup>1</sup> / <sub>2</sub> )
20.0	12 (7 <sup>1</sup> / <sub>16</sub> )	29 (1 <sup>1</sup> / <sub>8</sub> )	36 (1 <sup>7</sup> / <sub>16</sub> )	16 (5 <sup>7</sup> / <sub>8</sub> )

#### Silicone Rubber Seal and Leads

Silicone rubber seals and leads protect the heater against moisture and contamination from lubricating oil, cleaning solvents, plastic material or fumes and organic tapes. This seal is effective to 230°C (450°F) under continuous operation. Epoxy potting for up to 260°C (500°F) for continuous operation is available upon request.

Please note, when ordering this option, a 25 mm (1 in.) minimum no-heat section is required to allow for construction. Additional no-heat may be required to keep the seal below effective temperatures. To order, specify **silicone or epoxy seal and leads** and lead length.

# Cartridge/Insertion Heaters

## Metric FIREROD Cartridge Heaters

### Termination Options (Continued)

#### No-Heat Section

No-heat sections are recommended in applications where leads may be exposed to excessive heat, thus requiring a cooler lead end. Also use when heat is not required along the entire length of the metric FIREROD. No-heat extensions are available on all diameters with both pin style and swaged-in leads. To order, specify **no-heat** section and length of no-heat.

#### Ceramic Bead Insulation

Ceramic bead insulation protects the leads from high temperature ambients above 450°C (840°F). The beads fit over solid conductors and are extended long enough to reach a cooler area where flexible wires can be attached. To order, specify **ceramic beads** and length, and additional lead length.

#### Post Terminals

Post terminals provide a quick, secure connection with ring or fork connectors or bus bars. Threaded M4 x 12 mm studs are soldered to the solid power pins. Nuts and washers are provided. This termination is available on 16 and 20 mm (0.63 and 0.79 in.) diameter units. To order, specify **post terminals**.

# Cartridge/Insertion Heaters

## Metric FIREROD Cartridge Heaters

### Options

#### Accessories

##### WATLUBE™

WATLUBE™ is an electrically non-conductive lubricant acting as a barrier against high-temperature oxidation, thus making heater removal easier. In addition, it aids in the transfer of heat from the metric FIREROD to the block. However, do not use it as a substitute for proper hole fit. WATLUBE is packaged in 118 ml (4 oz) bottles. To order, specify **WATLUBE**.

#### Distributed Wattage

Distributed wattage varies the watt density along the length of the heater. This construction technique is used to compensate for heat losses along the edges of heated parts. To order, specify **distributed wattage** and give the length and wattage for each section.

#### Dual Voltage

When the metric FIREROD requires the flexibility of operating on two voltages, use this internal construction. Dual voltage is available on 12.5, 16 and 20 mm (0.5, 0.6 and 0.8 in.) diameter units. If not specified, 250 mm (9.8 in.) crimped on leads will be supplied. To order, specify **dual voltage**, voltage requirements and length of crimped on leads.

#### Threaded Fittings

##### DIN Thread Size

Metric FIREROD Diameter mm	Min. No-Heat Length mm (in.)	Thread Size DIN 13	A mm (in.)	B mm (in.)	Length of Threaded Section
6.5	16 (5/8)	M10 X 1.0	10.0 (3/8)	12 (7/16)	6.0 (1/4)
8.0	16 (5/8)	M12 X 1.0	11.0 (7/16)	14 (1/2)	6.5 (1/4)
10.0	18 (1 1/16)	M14 X 1.5	11.5 (7/16)	17 (5/8)	6.5 (1/4)
12.5	19 (3/4)	M16 X 1.5	12.0 (7/16)	19 (3/4)	6.5 (1/4)
16.0	20 (3/4)	M20 X 1.5	15.0 (3/5)	24 (15/16)	9.0 (3/8)
20.0	22 (7/8)	M26 X 1.5	16.0 (5/8)	30 (1 3/8)	10.0 (3/8)

① Swaged-in unit pictured.

##### National Pipe Thread (NPT) Thread Size

Threaded fittings allow for fast, water-tight installation of the heater into a threaded hole. These fittings can be ordered in either brass or stainless steel. Double threaded fittings are also available. See dimensions noted on the *DIN Thread Size and NPT Thread Size* charts or contact your Watlow representative if application exceeds limitations shown.

To order, specify stainless steel **threaded fittings**.

Metric FIREROD Diameter mm	Min. No-Heat Length mm (in.)	Thread Size NPT (in.)	A mm (in.)	B mm (in.)	Length of Threaded Section
6.5	19 (3/4)	(1/8)	13.5 (1 1/20)	11.0 (7/16)	9.5 (3/8)
8.0	22 (7/8)	(1/4)	17.0 (5/8)	14.0 (1/2)	13.0 (1/2)
10.0	22 (7/8)	(1/4)	17.0 (5/8)	14.0 (1/2)	13.0 (1/2)
12.5	25 (1)	(3/8)	20.0 (7/8)	17.5 (1 1/16)	14.0 (1 1/20)
16.0	28 (1 1/8)	(1/2)	23.0 (9/10)	22.0 (1 5/16)	16.0 (5/8)
20.0	32 (1 1/4)	(3/4)	26.0 (1)	29.0 (1 1/8)	19.0 (3/4)

# Cartridge/Insertion Heaters

## Metric FIREROD Cartridge Heaters

Options (Continued)

### Flanges

Stainless steel flanges are a convenient mounting method as well as a way to position a heater within an application. These flanges can be located in any no-heat section of the heater sheath. To order, specify **flange**, flange size and location.

Metric FIREROD Diameter mm	Flange Size	D mm (in.)	C mm (in.)	H mm (in.)
6.5, 8, 10, 12.5, 16 <sup>②</sup>	FS	25.4 (1)	19.1 (3/4)	3.7 (9/64)
6.5, 8, 10, 12.5, 16, 20	FM	38.1 (1 1/2)	28.6 (1 1/8)	4.3 (3/16)
16, 20	FL	51.0 (2)	38.1 (1 1/2)	5.3 (13/64)

<sup>①</sup> Swaged-in unit pictured.

<sup>②</sup> FS flange for 16 mm diameter is without holes.

### Internal Thermocouple Sensors

#### Style A

#### Style B

#### Style C

The **Style A** internal thermocouple can be used to evaluate heat transfer efficiency of an application, a measure enabling a customer to cut energy costs and increase heater life.

The **Style B** internal thermocouple gives a good approximation of part temperature. The thermocouple junction is in contact with the inside of the heater sheath, located in the 13 mm (1/2 in.) no-heat section anywhere along the heater length.

A **Style C** internal thermocouple is useful in applications where material flows past the end of the heater, as in plastic molding. This junction is embedded in a special end disc. Style C is not available on 20 mm (0.8 in.) diameter units. Unless requested, the disc end is not mechanically sealed.

To order, specify **internal thermocouple Style A, B or C** and thermocouple **Type J or K**. If not specified, 250 mm (10 in.) thermocouple leads are supplied.

### Thermocouple Types

ISA Code	Conductor Characteristics		Temperature Range	
	Positive	Negative	°C	(°F)
J	Iron (Magnetic)	Constantan (Non-magnetic)	-20 to 760	(0 to 1400)
K	Chromel® (Non-magnetic)	Alumel® (Magnetic)	-20 to 1260	(0 to 2300)

For other thermocouple types, contact your Watlow representative.

## Extended Capabilities For Metric FIREROD Cartridge Heaters

### Options

#### Terminal Box

NEMA 1, NEMA 4 (moisture-proof) and NEMA 7 (explosion-proof) octagonal terminal boxes can be mounted to a flange or threaded fitting on the 12.5, 16 and 20 mm diameter units. These 100 mm (4 in.) terminal boxes have conduit knockouts to protect electrical connections.

Aluminum and macrolon plastic terminal boxes are also available in the following sizes:

- 50 x 50 x 30 mm nominal size for heaters to 10 mm (0.4 in.) in diameter;
- 80 x 80 x 55 mm nominal size for heaters 12.5 mm (0.5 in.) or larger in diameter.

To order, specify **terminal box**, NEMA type and/or material type.

#### Individually Controlled Heat Zones

Individually controlled heat zones give the flexibility of controlling temperature by zones, along the length of the metric FIREROD. This is an advantage for heating requirements of certain applications, like seal bars. This internal construction can be ordered on 12.5, 16 and 20 mm diameter units. If not specified, 250 mm crimped on leads will be supplied. To order, specify **individually controlled heat zones** as well as length and wattage per zone and length of crimped on leads.

#### External Finishing—Centerless Grinding

Centerless grinding can be used to furnish precision diameters, thus permitting closer heater-to-part fit. Therefore, higher watt densities can be used. For centerless ground heaters, the heater must either have PTFE leads and seal (maximum 12 in. (305 mm) lead length) or have crimped on leads. Longer lead lengths are available, but require external connection. The length of a FIREROD available for centerless grinding is dependent on the construction, please contact your Watlow representative for assistance. To order, specify **centerless grinding**.

# Cartridge/Insertion Heaters

## MULTICELL™ Heaters

The advanced design of the MULTICELL™ insertion heater from Watlow offers three major advantages: extreme process temperature capability, independent zone control for precise temperature uniformity and loose fit design for easy insertion and removal.

### Performance Capabilities

- Engineered to achieve sheath temperatures up to 2050°F (1120°C)
- Up to six independently controllable zones

### Features and Benefits

#### Multiple, independently controllable zones

- Allows process temperature uniformity not possible with any other single-sheathed heater

#### Radiant design of heater

- Allows for loose insertion in boiling holes and piping holes
- Permits easy removal and replacement with minimal down time since it will not bind or seize in the hole

#### Oxidized sheath

- Provides high emissivity and improves the heater's performance as oxidation increases

#### Individual metal-sheathed coils swaged into a larger, high-temperature alloy outer sheath

- Provides maximum protection against element burnout through the outer sheath

**For detailed product and technical data,  
see the full MULTICELL product  
section located on pages 425 through 430.**

Tubular Heaters

# Tubular Heaters

## WATROD™ Single/Double-Ended Heaters

Available in single- or double-ended termination styles, the versatile and economical WATROD™ tubular heating element from Watlow® lends itself to virtually the entire range of immersion and air heating applications.

The single-ended WATROD tubular design has both terminals at one end. The opposite end is sealed. Flexible lead wires are 12 in. (305 mm) crimp connected to the terminal pin and have silicone-impregnated fiberglass oversleeves.

The double-ended WATROD, with its round cross-sectional geometry, is highly adaptable for bending—especially when bending is performed in the field. Watlow's double-ended MULTICOIL™ tubular elements offer various combinations of resistor coils and thermocouples inside one sheath. They have the ability to sense the heater's internal temperature accurately every time, or offer three-phase capability in one element.

Both single- and double-ended WATRODs share many construction features delivering long life—the resistance wire is centered in the heater sheath and electrically insulated with compacted, high-grade magnesium oxide for superior heating performance.

WATROD heating elements have a variety of mounting and termination options making them highly popular among industrial customers.

### Single-Ended WATROD Performance Capabilities

- Watt densities up to 45 W/in<sup>2</sup> (6.9 W/cm<sup>2</sup>)
- UL® and CSA component recognition up to 240VAC
- Alloy 800/840 and stainless steel sheath temperatures up to 1200°F (650°C)

### Double-Ended WATROD Performance Capabilities

- Watt densities up to 120 W/in<sup>2</sup> (18.6 W/cm<sup>2</sup>)
- UL® and CSA component recognition up to 600VAC
- Alloy 800/840 sheath temperatures up to 1600°F (870°C)
- Stainless steel sheath temperatures up to 1200°F (650°C)
- Steel sheath temperatures up to 750°F (400°C)
- Alloy 800 sheath temperatures up to 1800°F (982°C)

### Features and Benefits

#### Precision wound nickel-chromium resistance wire

- Distributes heat evenly to the sheath for optimum heater performance

#### Silicone resin seals

- Protects against moisture contamination and is rated to 221°F (105°C)

#### MgO insulation filled sheath

- Maximizes dielectric strength, heat transfer and life

#### Standard sheath materials

- Steel, 304 and 316 stainless steel, alloy 800/840 and alloy 600

#### 53 standard bend formations

- Allows forming the heating element to the application. Spirals, compound bends and multi-axis and multi-plane configurations

#### Stainless steel studs

- Fusion welded to terminal pins for mechanical strength

**Popular termination, mounting and moisture seal options available**

# Tubular Heaters

## WATROD Single/Double-Ended Heaters

### Options

#### Moisture Resistant Seals

WATROD's MgO insulating material is hygroscopic. To control the rate of moisture entering the heater, an appropriate moisture seal must be used. Choosing the correct seal is important to the life and performance of the heater. All materials have varying rates of gas vapor transmission. Be sure the maximum continuous use temperature is not exceeded at the seal location. Most end seals are applied with a small cavity in the end of the heater. The seal will also help prevent arcing at the terminal ends

#### Zoned Heaters

Single zone heaters are only available.

#### External Finishes

##### Bright Annealing

Bright annealing is a process that produces a smooth, metallic finish. It is a special annealed finish created in a non-oxidizing atmosphere. This finish is popular in the pharmaceutical and food and beverage markets.

To order, specify **bright annealing**.

##### Passivation

During the manufacturing process, particles of iron or tool steel may become embedded in the stainless steel or alloy sheath. If not removed, these particles may corrode, produce rust spots and/or contaminate the process. For critical sheath applications, passivation will remove free iron from the sheath.

To order, specify **passivation**.

#### Ceramic-to-Metal End-Seal

Ceramic-to-metal end-seals with threaded stud terminations provide an air-tight seal for continuous terminal temperatures up to 500°F (260°C). Watlow does not recommend this seal if terminations are exposed to temperatures exceeding 500°F (260°C).

Sheath Diameter in. (mm)	A in. (mm)	B in. (mm)	C in. (mm)	Thread Size
0.260 (6.6)	1 11/16 (42.9)	1/2 (13)	13/32 (10.32)	#8-32

## WATROD Single/Double-Ended Heaters

### Terminations

Double-ended WATROD elements are available with a variety of terminations. Single-ended WATROD elements are available with only flexible lead wires.

The following table and illustrations detail the terminations available with double- or single-ended WATRODs—for each available sheath diameter.

Flexible lead wires are 12 in. (305 mm), Sil-A-Blend™ 390°F (200°C) unless otherwise specified. Insulation options include TGGT 480°F (250°C) plus other temperature ratings. Contact your Watlow representative.

Overmolds are available for flexible lead wires only. Available in silicone rubber 390°F (200°C) and neoprene 212°F (90°C). Contact your Watlow representative.

## WATROD Single/Double-Ended Heaters

### Bend Formations

#### Double-Ended WATROD Bend Formations

Double-ended WATROD heating elements can be formed into spirals, compounds, multi-axis and multi-planes from 36 common bend configurations. Custom bending with tighter tolerances can be made to meet specific application needs.

Formation is limited by the minimum bend radius (R) and the straight length (F) required beyond the bend. In order to locate the end of a heated length within a bend, the radius must be 3 in. (76 mm) or larger. Additionally, overall length tolerance (T) must be included in one or more of the straight lengths.

Minimum radius for various sheath diameters and lengths are shown in the *Bend Formations* chart below. Illustrated on pages 67 to 76 are the 51 common bend configurations available on both stock and made-to-order WATROD heating elements.

WATROD Length Tolerance (T)			
Sheath Length		Length Tolerance	
in.	(mm)	in.	(mm)
11-50	(280-1270)	±1/8	(±3)
51-110	(1295-2795)	±3/16	(±5)
111-170	(2820-4320)	±1/4	(±6)
171-200	(4345-5080)	±3/8	(±10)
201 & up	(5105 & up)	±1/2	(±13)

#### Single-Ended WATROD Bend Formations

Watlow does not recommend field bending single-ended WATROD elements. Formation is limited by the minimum radius of a bend (R) and the straight length (F) beyond the bend. The radius must be 3 in. (75 mm) or more for the heated length's end to be inside a bend.

Additionally, the overall length tolerance (T) must be provided for in one or more of the specified lengths.

The four common bend configurations available for standard and made-to-order single-ended WATROD elements are Figures 1, 6, 22 and 28.

To order a common bend formation, specify the **bend figure number**, dimensions and critical tolerances.

WATROD Minimum Radius							
Sheath Diameter in.	(mm)	Field Bend R <sup>①</sup>		Factory R <sup>①</sup>		F <sup>②</sup> Dimension	
		in.	(mm)	in.	(mm)	in.	(mm)
0.260	(6.6)	3/4	(19.0)	3/8	(9.5)	1/2	(13.0)
0.315	(8.0)	3/4	(19.0)	1/2	(13.0)	1/2	(13.0)
0.375	(9.52)	1	(25.0)	1/2	(13.0)	1/2	(13.0)
0.430	(10.92)	1	(25.0)	1/2	(13.0)	3/4	(19.0)
0.475	(12.07)	1	(25.0)	5/8	(15.9)	1	(25.0)
0.490	(12.45)	1	(25.0)	5/8	(15.9)	1	(25.0)

① R is the inside radius of a bend.

② F is the distance from the sheath's end to the start of the first bend.

## WATROD Single/Double-Ended Heaters

### Mounting Methods

#### Brackets

A 0.065 in. (1.7 mm) thick stainless steel bracket provides element mounting in non-pressurized applications. Attached to the heater sheath, these brackets are not suited for liquid-tight mountings. The bracket is located 1/2 in. (13 mm) from the sheath's end, unless otherwise specified.

To order, specify **mounting bracket**.

#### Locator Washers

Stainless steel locator washers retain the heated area of the sheath in the work zone, while allowing for expansion and contraction during cycling.

To order, specify **locator washer**, along with dimension from the heater's end.

#### Single Leg Bracket

A 1 1/2 in. (38 mm) x 1 in. (25 mm) wide x 16 gauge stainless steel bracket with one element hole and one mounting hole 1/2 in. (13 mm) from end.

To order, specify **single leg bracket**.

# Tubular Heaters

## WATROD Single/Double-Ended Heaters

### Mounting Methods (Continued)

#### Threaded Bulkheads

A threaded bushing with flange on the heater sheath provides rigid, leak-proof mounting through the walls of tanks. A gasket, plated steel washer and hex nut are included. The threaded end of the bushing is flush with the sheath's end unless otherwise specified. Threaded bulkheads are available in brass, steel or stainless steel as indicated in the table.

To order, specify **threaded bulkheads** and the specifications from the table.

① Designates the dimension across flats for hex flange style and outside diameter for round flange style.

② Equal to "B" dimension unless otherwise specified.

## Extended Capabilities For WATROD Single/Double-Ended Heaters

### Options

#### Terminal Enclosures

General purpose terminal enclosures, without thermostats, are standard on all screw plug immersion heaters. To meet specific application requirements, Watlow offers the following optional terminal enclosures:

- General purpose with single or double pole thermostat
- Moisture-resistant or corrosion resistant—available with optional single or double pole thermostat
- Explosion-resistant class 1, groups B, C and D explosion resistant—available with optional single or double-pole thermostat.
- Explosion and moisture-resistant combination—available with optional single- or double-pole thermostat

#### Zoned Heaters

Multiple zone heaters with up to (5) zones are available.

#### Features and Benefits

##### Standard sheath materials

- Optional materials available which include titanium, alloy 20, Hastelloy C276, 321 SS and alloy 400

## Extended Capabilities For WATROD Single/Double-Ended Heaters

### Mounting Methods

#### Threaded Bulkheads

A threaded bushing with flange on the heater sheath provides rigid, leak-proof mounting through the walls of tanks. A gasket, plated steel washer and hex nut are included. The threaded end of the bushing is flush with the sheath's end unless otherwise specified. Threaded bulkheads are available in brass, steel or stainless steel as indicated in the table.

To order, specify **threaded bulkheads** and the specifications from the table.

#### Threaded Bulkhead Specifications

# Tubular Heaters

## WATROD Single/Double-Ended Heaters

### Single-Ended WATROD

#### Application Hints

The single-ended WATROD heater's construction limits its usefulness in some applications. The following are some guides to follow when considering a single-ended WATROD.

- When single-ended termination simplifies application wiring.
- The application requires lower wattage or a smaller package.
- Do not locate the end of the heated length within a bend, unless the radius is 3 in. (75 mm) or more. Field bending is not recommended.
- Bending is limited to bend Figures 1, 6, 22 and 28 (see pages 67 to 72 for details).
- Ensure termination temperatures do not exceed 390°F (200°C) or the seal's maximum rating.
- Keep terminations clean, dry and tight.

# Tubular Heaters

## WATROD Double-Ended Heaters

### High-Temperature Tubular Heaters

Watlow manufactures high-temperature tubular heaters to bridge the gap between standard tubular heaters and Watlow MULTICELL™ heaters. This tubular is well suited for process air heating applications in excess of 1300°F (704°C), resulting in a maximum sheath temperature of 1800°F (983°C). Controlled lab testing between the new design and current tubular designs show an increase in life of approximately 50 percent.

The high-temperature tubular consists of an engineered tubing with an outer sheath of alloy 600 and a special internal construction. The outer sheath offers high temperature capabilities, reduced oxidation as well as corrosion resistance.

The tubular offering is available in 0.430 and 0.375 inch diameters that are configurable either as formed tubulars or process heaters. The heaters can also be welded to flanges and plates for mounting purposes. Maximum sheath length available is 275 inches for the 0.430 inch and 0.375 inch diameters. The factory should be contacted for longer sheath lengths.

### Features and Benefits

#### Alloy 600 sheath material and a special internal construction

- Assures high temperature performance and corrosion protection in tough applications

#### 0.430 inch diameters\*

- Allows heater to be configured to existing tubular designs that may be experiencing short life

**\*Note: 0.375 diameters are available in Watlow's extended capabilities, contact your Watlow representative for details.**

#### Dual-ended termination

- Installs into flanges and screw plugs similarly to standard product configurations

#### Bendable in standard formations

- Makes the heater easy to apply in a wide variety of applications

### Typical Applications

- High temperature ovens and furnaces
- Radiant heating
- Drying
- Environmental—VOC abatement
- Process air heating: duct heaters, circulation heaters
- Vacuum applications
- Flue gas cleaning (desulphurization)
- Fluidized beds

# Tubular Heaters

## WATROD Double-Ended Heaters

### High-Temperature Tubular Heaters

#### Sheath Temperature Versus Oven Temperature at Various Watt Densities

This chart is used to verify the correct watt density for an oven application assuming no air flow. To use the chart, first select the oven process temperature on the X axis, using the chosen watt density read the sheath temperature rise above oven temperature from the Y axis. This number should then be added to oven temperature. If this number is greater than 1800°F (982°C), a lower watt density should be chosen.

#### Heater Life Estimate Service

Watlow now provides an industry first service with the offering of the high-temperature tubular. By providing operating parameters, Watlow provides customers with the estimated life of the heater. To get this information, the following information should be provided:

- Heater voltage
- Heater wattage
- Heater diameter (0.430 or 0.375 in.)
- Heated length
- Bend configuration and dimensions (number of bends and radius)
- Application including process temperature
- Power switching device and cycle time (SCR, etc.)

#### High-Temperature Heater Comparisons

\*Assuming normal design practices.

# Tubular Heaters

EXTENDED  
CAPABILITY

## WATROD Single/Double-Ended Heaters

### Extended Capabilities For MULTICOIL™ Tubular Heaters

The tubular element with multiple coils and/or thermocouples inside one sheath from Watlow answers the need for a versatile, innovative tubular heater. Watlow's patented method of packaging a thermocouple inside of a heater with one or more resistance coils, gives the ability to sense a heaters' internal temperature accurately, every time.

Moreover, this is the first tubular heater in the industry with three-phase capability. The three coil, three-phase heater will offer a compact package solution while delivering the full power required in a compact heater package. Previously three separate heaters would have been required to do the same job; therefore Watlow's MULTICOIL™ heater capabilities save money.

### Performance Capabilities

- Watt densities up to 60 W/in<sup>2</sup> (9.3 W/cm<sup>2</sup>)
- Sheath temperatures up to 1600°F (870°C)
- 304 and 316 stainless steel sheath temperatures up to 1200°F (650°C)

### Features and Benefits

#### Three-phase capability

- Results in one element versus three, lower amperage, reduced installation time and lower overall cost

#### Single-ended

- Allows for mounting in a 1/2 inch NPT or 3/4 inch NPT fitting with three-phase capability
- Sensor is not available

#### Multiple coil operations

- Reduces inventory by allowing dual voltage capability

#### Versatile forming capabilities

- Forms into many configurations

#### Internal construction with sensor

- Allows space savings because drilling and tapping of flange is unnecessary; plus, the interior thermocouple eliminates contamination buildup around the external sensing tip, reducing the possibility of false readings

### Typical Applications

- Foodservice
- Process
- Medical
- Milled groove
- Plastics
- Plating
- Oven heating
- Semiconductor

## WATROD Single/Double-Ended Heaters

### Extended Capabilities For MULTICOIL Tubular Heaters

#### Options

##### Option A

3-phase tubular, 0.475 and 0.490 inch diameter.

##### Option E

1-phase tubular with three different one phase circuits, 0.475 and 0.490 inch diameter.

##### Option C

1-phase tubular with one resistance wire and two thermocouples, 0.475 and 0.490 inch diameter.

##### Option F

1-phase tubular with two resistance coils, 0.375, 0.430, 0.475 and 0.490 inch diameter.

##### Option D

1-phase tubular with one resistance coil and one thermocouple, 0.375, 0.430, 0.475 and 0.490 inch diameter.

## Specifications

### Termination Styles

- Lead wires 392°F (200°C)  
Sil-A-Blend® or 482°F (250°C) GGS.

### Moisture Seals

Moisture seals are required, options include:

- Epoxy with temperature rating to 356°F (180°C).  
Typical applications include water/oil immersion.
- Lavacone with temperature rating to 221°F (105°C).  
Typical application includes air heating.
- High-temperature ceramic rated to 2800°F (1538°C).
- Contact your Watlow representative for other moisture seal options.

### Mounting options

- Mounting brackets
- Locator washers
- Water-tight bulkheads

### Maximum trim length

- 237 in. (6020 mm), heater designs with trim length greater than 120 in. (3048 mm) must be reviewed with your Watlow representative.

### Sheath materials

- Alloy 600, 800, 840, 304 and 316 stainless steel, contact your Watlow representative for other sheath material options.

### Internal thermocouple options

- Type K is used, contact your Watlow representative for Type J thermocouple options.

## **WATROD Single/Double-Ended Heaters**

### ***Extended Capabilities For Milled Groove Tubular Heaters***

WATROD milled groove heaters are precision-formed and customized to your hot runner mold application. Even tight radius bends of 0.250 inch maintaining tolerances of  $\pm 0.062$  to  $\pm 0.002$  inch are possible. This capability not only allows you freedom to design for the optimum uniform heating pattern for your plastics process, but also guarantees quick and easy installation.

Simply send your groove dimensions in a detailed drawing or on CAD file. Depending on the formation requirements, the resulting CAD design will be transferred to either Watlow's CNC bending equipment or a highly skilled bending operator.

A variety of sheath materials are available including alloy 800, 304 stainless steel and 316 stainless steel; each offering unique advantages of long life in high temperature molds, rigidity to maintain shape during shipment and corrosion resistance.

Watlow not only delivers the heat fast to the process with efficient heat transfer, but guarantees the heater's fast delivery, too. While Watlow guarantees standard delivery within three to four weeks, tough delivery schedules are Watlow's specialty.

### **Features and Benefits**

#### **Precise conformity to customer specifications**

- Ensures easy installation—bending tolerances as low as  $\pm 0.002$  in.

#### **Common element diameters**

- Includes 0.260, 0.315, 0.375 and 0.430 in. (6.6, 8, 9.5 and 10.9 mm) diameters

#### **Alloy 800 sheath material**

- Corrosion resistant, capable in high-temperature environments

#### **304 stainless steel**

- Excellent pliability, best choice for small bend radii

#### **Superior resistance coil design**

- Produces even heating

#### **Threaded stud or lead wire termination as required**

- Provides robust options for challenging environments

### **Typical Applications**

- Hot runner molds
- Precise heat uniformity

## WATROD Single/Double-Ended Heaters

### Extended Capabilities For Milled Groove Tubular Heaters

Use the *Milled Groove Sheath Watt Density and Groove Fit* chart to find the recommended watt density or tightest groove fit. Optimum groove fit, without heat transfer cement, can be determined by plotting the intersect point between the required sheath watt density and the Delta temperature (T). If the Delta T is not known, simply subtract the mold temperature from the maximum 1000°F (540°C) sheath temperature. Any combination of watt density and groove fit which results in a Delta T below the recommended maximum will maximize heater life. Conversely, if the Delta T is greater, less heater life can be expected.

- Recommended maximum watt density = 40 to 70 W/in<sup>2</sup> (6.2 to 10.9 W/cm<sup>2</sup>)
- Recommended groove = 0.065 inch (1.65 mm) larger in diameter than sheath diameter and use heat transfer cement.
- Recommended heater sheath diameter = 0.315 in. (8 mm)
- Recommended maximum Delta T = 400°F (205°C)
- Maximum sheath temperature = 1000°F (540°C)
- Recommended sheath material = alloy 800

# Tubular Heaters

## FIREBAR® Single/Double-Ended Heaters

FIREBAR® heating elements provide added heating performance over standard round tubular heating elements—especially for immersion applications in petroleum based liquids requiring high kilowatts.

The FIREBAR's unique flat surface geometry packs more power in shorter elements and assemblies, along with a host of other performance improvements. These include:

- Minimizing coking and fluid degrading
- Enhancing the flow of fluid past the element's surface to carry heat from the sheath
- Improving heat transfer with a significantly larger boundary layer allowing much more liquid to flow up and across the sheath's surface

FIREBAR elements are available in single- and double-ended constructions with one inch or  $\frac{5}{8}$  inch heights. These two configuration variables make it possible to use FIREBAR elements instead of round tubular elements in virtually all applications.

FINBAR™ is a special version of the one inch, single-ended FIREBAR. FINBAR is specially modified with fins to further increase surface area for air and gas heating applications. Details are contained in the *FINBAR* section, starting on page 112.

### Double-Ended Performance Capabilities

#### One Inch

- Watt densities up to 120 W/in<sup>2</sup> (18.6 W/cm<sup>2</sup>)
- Sheath temperatures up to 1400°F (760°C)
- 304 stainless steel sheath temperatures up to 1200°F (650°C)
- Voltages up to 240VAC
- Amperages up to 48 amperes per heater or 16 amperes per coil

#### $\frac{5}{8}$ Inch

- Watt densities up to 90 W/in<sup>2</sup> (13.9 W/cm<sup>2</sup>)
- Alloy 800 sheath temperatures up to 1400°F (760°C)
- Voltages up to 240VAC
- Amperages up to 32 amperes per heater or 16 amperes per coil

One Inch Double-Ended FIREBAR Element and Lead Configurations

$\frac{5}{8}$  Inch Double-Ended FIREBAR Element and Lead Configurations

### Single-Ended Performance Capabilities

#### One Inch

- Watt densities up to 60 W/in<sup>2</sup> (9.3 W/cm<sup>2</sup>)
- Alloy 800 sheath temperatures up to 1400°F (760°C)
- 304 stainless steel sheath temperatures up to 1200°F (650°C)
- Voltages up to 240VAC
- Amperages up to 48 amperes per heater or 16 amperes per coil

#### $\frac{5}{8}$ Inch

- Watt densities up to 80 W/in<sup>2</sup> (12.4 W/cm<sup>2</sup>)
- Alloy 800 sheath temperatures up to 1400°F (760°C)
- Voltages up to 240VAC
- Amperages up to 16 amperes per heater

## FIREBAR Single/Double-Ended Heaters

### Features and Benefits

#### One Inch Features and Benefits

##### Double-Ended

**Streamline, 0.235 x 1.010 in. (5.9 x 25.6 mm) normal to flow dimension**

- Reduces drag

**70 percent greater surface area per linear inch compared to a 0.430 in. (11 mm) diameter round tubular heater**

- Reduces watt density or packs more kilowatts in smaller bundles

##### Compacted MgO insulation

- Maximizes thermal conductivity and dielectric strength

##### Nickel-chromium resistance wires

- Precision wound

##### 0.040 in. (1 mm) thick MgO walls

- Transfers heat more efficiently away from the resistance wire to the sheath and media—conducts heat out of the element faster

##### Three resistance coil design

- Configurable to either one- or three-phase power, readily adapts to a variety of electrical sources and wattage outputs

##### Lavacone seals

- Provides protection against humid storage conditions, moisture retardant to 221°F (105°C)

##### Single-Ended

##### Single-ended termination

- Simplifies wiring and installation

**Streamline, 0.235 x 1.010 in. (5.9 x 25.6 mm) normal to flow dimension**

- Reduces drag

**70 percent greater surface area per linear inch**

- Reduces watt density from that of the 0.430 in. (11 mm) diameter round tubular

##### Slotted end

- Provides installation ease in clamp-on applications

##### Lavacone seals

- Provides protection against humid storage conditions, moisture retardant to 221°F (105°C)

#### 5/8 inch Features and Benefits

##### Double-Ended

**Special sheath dimensions, 0.235 x 0.650 in. (5.9 x 16.5 mm)**

- Results in a lower profile heater

**10 percent greater surface area per linear inch**

- Reduces watt density from that of the 0.430 in. (11 mm) diameter round tubular heater

##### 0.040 in. (1 mm) thick MgO walls

- Transfers heat efficiently away from the resistance wire to the heated media—conducts heat out of the element faster

##### Lavacone seals

- Provides protection against humid storage conditions, moisture retardant to 221°F (105°C)

##### Single-Ended

##### Single-ended termination

- Simplifies wiring and installation

**Special sheath dimensions, 0.235 x 0.650 in. (5.9 x 16.5 mm)**

- Results in a lower profile heater for more wattage in a smaller package

##### Slotted end

- Provides installation ease in clamp-on applications

##### Lavacone seals

- Provides protection against humid storage conditions, moisture retardant to 221°F (105°C)

# Tubular Heaters

## FIREBAR Single/Double-Ended Heaters

### Performance Features

FIREBAR's flat tubular element geometry produces performance features and benefits not possible with traditional round tubular technology. The following describes how and why the FIREBAR is functionally superior for many applications—especially those requiring large wattage with low watt density.

#### By using the FIREBAR element it will:

- Lower the element's watt density
- Reduce element size and keep the same watt density
- Increase element life by reducing sheath temperature

#### Flat Shape Produces Lower Sheath Temperature

The FIREBAR element operates at a lower sheath temperature than a round tubular element of equal watt density because of three factors.

#### 1. Flat Surface Geometry

FIREBAR's flat, vertical geometry is streamline. The liquid's flow past the heating element's surface is not impaired by back eddies inherent in the round tubular shape. The FIREBAR's streamline shape results in fluids flowing more freely with more heat carried away from the sheath.

#### 2. Normal to the Flow

The element's width (thickness) of both 1 inch and 5/8 inch FIREBAR elements is just 0.235 in. (5.9 mm). Compared to a 0.430 in. (11 mm) round tubular element, this relative thinness further reduces drag on liquids or gases flowing past the heater.

#### 3. Buoyancy Force

The FIREBAR element's boundary layer, or vertical side, is greater than virtually all round tubular elements. This is 1.010 and 0.650 in. (25.6 and 16.5 mm) for the one inch and 5/8 in. FIREBARs respectively, compared to a 0.430 in. (11 mm) diameter on a round tubular element. The FIREBAR element's increased height, relative to flow, increases the buoyancy force in viscous liquids. This buoyancy force can be as much as 10 times greater depending on the FIREBAR element and liquid used.

#### Comparative Widths

#### Watt Density and Surface Area Advantages

The surface area per linear inch of a 1 in. FIREBAR is 70 percent greater than the 0.430 in. (11 mm) diameter round tubular element. The 5/8 in. FIREBAR is nearly 10 percent greater.

Element Type	Surface Area Per Linear inch (cm)	
	in <sup>2</sup>	cm <sup>2</sup>
1 in. FIREBAR	2.30 in <sup>2</sup>	(5.84 cm <sup>2</sup> )
5/8 in. FIREBAR	1.52 in <sup>2</sup>	(3.86 cm <sup>2</sup> )
0.430 in. Round	1.35 in <sup>2</sup>	(3.43 cm <sup>2</sup> )

#### Flat vs. Round Geometry Comparisons

The unique flat surface geometry of the FIREBAR element offers more versatility in solving heater problems than the conventional round tubular element. The following comparisons show how the FIREBAR element consistently outperforms round tubular heaters. FIREBAR elements can:

- Reduce coking and fluid degrading
- Increase heater power within application space parameters
- Provide superior heat transfer in clamp-on applications resulting from greater surface area contact
- Lower watt density

Reducing watt density or sheath temperature extends life. The FIREBAR element allows you to do either, without sacrificing equipment performance ... as is proven by the accompanying *Heater Oil Test, Air Flow and Watt Density vs. Sheath Temperature* graphs.

# Tubular Heaters

## FIREBAR Single/Double-Ended Heaters

### Technical Data

The *FIREBAR Heater Oil Test* graph compares sheath temperatures of 40 W/in<sup>2</sup> (6.7 W/cm<sup>2</sup>) flat and round tubular elements. The FIREBAR element consistently operates at a lower sheath temperature than the round tubular element, even when light oils are tested at different temperatures. This reduces the chance that coking and fluid degradation will occur.

In fact, the FIREBAR element's sheath temperature at 40 W/in<sup>2</sup> (6.7 W/cm<sup>2</sup>) is lower than a 30 W/in<sup>2</sup> (4.6 W/cm<sup>2</sup>) round tubular element.

### Heater Size and Power

The *Heater Size Comparison* chart shows, at the same wattage and watt density, the FIREBAR element is 38 percent shorter than a 0.430 in. (11 mm) round tubular element. The FIREBAR element requires less space in application and equipment designs.

#### Heater Size Comparison

Element	Heated Length in. (mm)	Wattage	W/in <sup>2</sup>	(W/cm <sup>2</sup> )
1 in. FIREBAR Element	19 <sup>7</sup> / <sub>8</sub> (504.8)	1000	23	(3.6)
0.430 in. Round Tubular Element	32 <sup>1</sup> / <sub>4</sub> (819.0)	1000	23	(3.6)

The *Heater Power Comparison* chart demonstrates equal watt density, element length and increased total wattage for the FIREBAR element. The power in the FIREBAR element is 70 percent greater.

#### Heater Power Comparison

Element	Heated Length in. (mm)	Wattage	W/in <sup>2</sup>	(W/cm <sup>2</sup> )
1 in. FIREBAR Element	32 <sup>1</sup> / <sub>4</sub> (819.0)	1700	23	(3.6)
0.430 in. Round Tubular Element	32 <sup>1</sup> / <sub>4</sub> (819.0)	1000	23	(3.6)

# Tubular Heaters

## FIREBAR Single/Double-Ended Heaters

### Technical Data (Continued)

#### Clamp-On Applications

Direct immersion in the liquid may not always be practical. In these instances the FIREBAR element can be clamped to a tank wall. Heat from the FIREBAR is conducted to the tank wall and into the media.

FIREBAR elements are also economical platen heaters. The *Platen Heating* graph shows FIREBAR's large, flat surface area allows it to operate at twice the watt density of round tubular elements ... without sacrificing heater life.

Clamps should be placed approximately 6 in. (150 mm) apart and torqued down with 60 in.-lbs (6.8 Newton meters).

#### Platen Heating (°F)

#### Platen Heating (°C)

#### Watt Density vs. Sheath Temperature

The *Watt Density vs. Sheath Temperature* graph features sheath temperature curves for commonly heated substances. A FIREBAR element's watt density will result in the sheath temperature shown at the intersecting point of its vertical watt density line and substance curve.

# Tubular Heaters

## FIREBAR Single/Double-Ended Heaters

### Technical Data (Continued)

#### Air Heating

The Air Flow/Watt Density/Sheath Temperature graph shows the relationship between air flow, watt density and sheath temperature. Keep in mind that lower sheath temperature yields longer heater life.

To use the Air Flow graph, determine the air flow in feet per second (or meters per second). Then follow the curve to find the recommended sheath temperature and watt density.

Air Flow Normal to Sheath Geometry

#### Air Flow/Watt Density/Sheath Temperature (°F)

#### Air Flow/Watt Density/Sheath Temperature (°C)

#### Moisture Resistant Seals

A lavacone seal is provided to prevent moisture and contaminants from entering the heater. Upon request, optional silicone rubber (RTV) and epoxy resin seals may be ordered.

##### Silicone Rubber (RTV) Seal

Silicone rubber RTV seals are 1/8 in. (3.2 mm) moisture barriers surrounding the terminal pins at the end of the sheath. Silicone rubber is effective to 392°F (200°C).

##### Epoxy Resin Seal

Epoxy resin seals are 1/8 in. (3.2 mm) moisture barriers surrounding the terminal pins at the end of the sheath. Epoxy resin is effective to 194°F (90°C) or 356°F (180°C), and recommended for water heating applications.

#### Application Hints

- Choose a FIREBAR heating element instead of an assembly, when the application requires lower wattages or smaller system packages.
- Keep terminations clean, dry and tight.
- Extend the heated section completely into the media being heated at all times to maximize heat transfer and heater life.
- Do not locate the end of the heated length within a bend, unless the radius is 3 in. (76 mm) or larger.
- Ensure termination temperatures do not exceed 392°F (200°C) or the maximum temperature rating of the end seal, whichever is lower.

# Tubular Heaters

## FIREBAR Single/Double-Ended Heaters

All FIREBAR heaters are available with a variety of termination options. Contact your Watlow representative for availability.

### Bending

#### Major and Minor Axis Bending Parameters

The following illustrations detail the recommended major and minor axis bend parameters for FIREBAR elements. These illustrations show the relationship between the type of bend and the location of heat and no-heat sections. See the next two pages for the 15 common bend formations.

**Note:** Watlow does not recommend field bending FIREBAR elements. If the element must be bent in the field, please contact your Watlow representative for assistance.

#### 180° Minor Axis Heated Bend

## FIREBAR Single/Double-Ended Heaters

### Bend Formations

FIREBAR elements can be formed into spirals, compounds, multi-axis and multi-plane configurations from 15 common bends. Custom bending with tighter tolerances can be made to meet specific application needs.

Formation is limited by bending parameters specified in the illustrations of major and minor axis bends on the previous page. On these illustrations, please note the no-heat end location.

The no-heat end junction must be located a minimum of 1 in. (25 mm) from any bend. If these parameters are not followed, the heater may fail prematurely.

Illustrated below are the common bends that can be ordered for all FIREBAR heating elements.

To order a common bend, specify the **figure number** and **critical dimensions**.

**Note:** The alpha characters and symbols are used to designate specific dimensions within each illustration.

Minor Axis	Major Axis	Minor Axis	Major Axis

## FIREBAR Single/Double-Ended Heaters

### Mounting Brackets

Steel brackets provide element mounting in non-pressurized applications. In air heating applications, an 18-gauge aluminized steel bracket is press fitted to the element. A 1/4 in. (6 mm) thick steel bracket is brazed or welded liquid-tight to the element for liquid heating. Upon request, stainless steel brackets can be provided. Special sizes also available.

The bracket is located 1/2 in. (13 mm) from the sheath's end, 1/16 in. (1.6 mm) if welded. Available on 5/8 in. (15.9 mm) FIREBAR as **made-to-order** only.

To order, specify **mounting bracket** as well as type, location, material and size.

#### Type 1

#### Type 2

#### Type 3

### Water-Tight Double-Leg Threaded Fitting

A threaded 1 5/8 in.-10 UNC stainless steel fitting with flange on the heater sheath provides rigid, leak-proof mounting through tank walls. This fitting allows both legs of the heater to pass through the same opening. A gasket, plated steel washer and hex nut are included. The threaded end of the bulkhead is mounted flush with the sheath's end, unless otherwise specified. Available on **1 inch FIREBAR only (brazed only, available)**.

To order, specify **water-tight double-leg threaded fitting**.

### Surface Finish

#### Bright Annealing

Bright annealing is a process that produces a smooth, metallic finish. It is a special annealed finish created in a non-oxidizing atmosphere. This finish is popular in the pharmaceutical and foodservice/beverage markets.

To order, specify **bright annealing**.

#### Passivation

During manufacturing, particles of iron or tool steel may be embedded in the stainless steel or alloy sheath. If not removed, these particles may corrode and produce rust spots. For critical sheath applications, passivation will remove free iron from the sheath.

To order, specify **passivation**.

## Extended Capabilities For FIREBAR Single/Double-Ended Heaters

### Internal Thermocouples

To provide protection against element over-temperature conditions, 1 in. (25 mm) double-ended FIREBAR elements can be ordered with ASTM **Type K** thermocouples. This is accomplished by eliminating the center resistance coil and embedding the thermocouple junction inside the sheath. Thus, thermocouples are available only on two resistance coil, 1 in. (25 mm) FIREBAR elements.

To order, specify:

- **Type K** thermocouple
- Distance the junction is to be located from the element's end
- Lead length

### Thermocouple Types

ASTM Type	Conductor Positive	Characteristics		Recommended Temp. Range °F (°C)
		Negative		
K	Chromel® (Non-magnetic)	Alumel® (Magnetic)		0 to 2000 (-20 to 1100)

① **Type K** thermocouples are rated 32 to 2282°F (0 to 1250°C). Watlow does not recommend exceeding the temperature range shown on this chart.

### Options for 5/8-Inch FIREBAR

- Electropolished finish
- Custom formations
- Cordset
- Termination overmolds (silicone or neoprene)
- Terminal enclosures (general purpose, moisture resistant, moisture/explosion resistant and explosion resistant)
- Internal thermocouple (dual end only, single or dual coil)
- Custom wattage tolerance (±5%)

### Options for One-Inch FIREBAR

- Electropolished finish
- Bulkhead, single leg
- Custom formations
- Cordset
- Termination overmolds (silicone or neoprene)
- Terminal enclosures (general purpose, moisture resistant, moisture/explosion resistant and explosion resistant)
- Internal thermocouple (dual end only, single or dual coil)
- Custom wattage tolerance (±5%)

## Mounting Brackets

### Threaded Bulkheads

A threaded stainless steel bushing with flange on the heater sheath provides rigid, leak-proof mounting through tank walls. A gasket, plated steel washer and hex nut are included (brazed only, available).

To order, specify **threaded bulkheads**.

# Tubular Heaters

## FINBAR™ Single-Ended Heaters

Composed of aluminized steel fins press fitted to a one-inch single-ended FIREBAR element. The FINBAR™ is designed to improve heat transfer to the air and permits putting more power in tighter spaces—like forced air ducts, dryers, ovens and load bank resistors.

Heat transfer, lower sheath temperature and element life are all maximized by its finned construction. Installation is simplified by terminations exiting at one end and mounting accommodations on both ends.

### Performance Capabilities

- Watt densities up to 50 W/in<sup>2</sup> (7.7 W/cm<sup>2</sup>)
- 304 stainless steel sheath temperatures up to 1200°F (650°C)
- Voltages up to 480VAC
- Amperages up to 48 amperes per heater or 16 amperes per coil

### Features and Benefits

#### Rugged aluminized steel fins

- Provides an increase in surface area to approximately 16 square inches for every linear inch of element length. Fins press fitted to the heating element improve heat transfer to the air

#### Single-ended termination

- Simplifies wiring and installation

#### Stainless steel mounting bracket, welded to the terminal end, supplied with a slotted end

- Allows ease of installation

#### Lavacone seals

- Provides protection against humid storage conditions, moisture retardant to 221°F (105°C)

### Typical Applications

- Forced air heating for dryers, ovens, ducts
- Still air heating for ovens, comfort heating
- Incubators
- Ink drying
- Load bank resistors

### Construction Features

**Watt Density:** Up to 40 W/in<sup>2</sup> (6.2 W/cm<sup>2</sup>)

**Fin Surface Area:** 16 in<sup>2</sup>/linear in. (40.5 cm<sup>2</sup>/linear cm)

**Fin Cross Section:** 2 x 1 in. (50 x 25 mm)

**Maximum Operating Temperature:** Sheath material: 304 SS, 1200°F (650°C), Fin material; aluminized steel; 1100°F (600°C)

**Heater Length:** 11 to 120 in. (280 to 3050 mm)

**No-Heat Length:** 1 in. (25 mm) min., 12 in. (305 mm) max.

**Voltages:** Up to 240VAC

**Phase:** 1-phase parallel or 3-phase wye

**Resistance Coils:** 1 or 3

**Terminations:** Flexible lead wires, quick connect (spade), screw lug (plate) and threaded stud

**Seal Material:** Lavacone, rated to 221°F (105°C)

**Single-End Configuration:** Slotted

**Agency Recognition:** Refer to FIREBAR UL®

# Tubular Heaters

## FINBAR Single-Ended Heaters

### Air Heating

The *Watt Density, Air Flow and Sheath Temperature* graph shows the relationship between watt density, air flow velocity and sheath temperature, along with a recommended temperature to avoid deteriorating the fins. Be aware that **lower sheath temperature yields longer heater life**.

The graphic representation is based on a single-ended FINBAR, various air velocities (at 68°F/20°C inlet temperature) and different watt densities.

Watt Density, Air Flow and Sheath Temperature (°F)

To determine, from the graph, the operating temperature of the FINBAR's sheath, identify the air velocity curve that approximates your application in feet per second (meters per second). Then, look at the vertical line that most closely approximates the FINBAR's watt density. From the intersecting point, read over to the temperature column to determine the sheath's operating temperature.

Watt Density, Air Flow and Sheath Temperature (°C)

### Dual Ended FINBAR

FINBAR elements are typically terminated at one end. Upon request, however, dual-ended FINBAR heaters can be ordered. To order, specify **dual-ended FINBAR** and lead length.

### Application Hints

- Avoid deteriorating the fins by not exceeding the recommended maximum fin temperature of 1100°F (600°C).
- Ensure proper air flow to prevent premature heater failure.
- Locate the temperature sensor downstream from heater(s) for process temperature sensing.

The following mounting parameters are recommended:

- Air flow over element must be parallel with the flat side.
- Element center line to element center line spacing must be a minimum of 1½ in. (38 mm).

Proper air flow relative to the heater's sheath is parallel with the longer cross sectional axis.

# Flexible Heaters

## Flexible Shapes and Geometries

Flexible heaters are thin, bendable and shaped to fit almost any type of equipment. Heat can be applied to complex shapes and geometries without sacrificing efficiency or dependability.

Excellent heat transfer results from the heater's thin design and direct bonding to an application. Flexible heaters provide fast heat-up and cool-down rates, uniform heat distribution and high watt densities.

## Features and Benefits

### Flat geometry

- Permits holes, notches and unusual shapes

### Option of two material types and two element styles

- Allow wider flexibility

### Lightweight construction and low thermal mass

- Permit use in applications with limited space or weight requirements

### Heating elements as close as 0.003 in. (0.08 mm)

- Creates faster heat-up and cool-down time

### Uniformly spaced element paths

- Distributes heat more evenly

## Typical Applications

- Medical equipment including blood analyzers, respiratory therapy units and hydrotherapy baths
- Semiconductor equipment, including vacuum and gas delivery lines and wafer processing equipment
- Foodservice equipment, including food holding and warming cabinets
- Battery heating
- Satellite and communication equipment
- Freeze protection for military hardware, aircraft instrumentation, hydraulic equipment, etc.
- Any application requiring a flexible shape or design

# Flexible Heaters

## Flexible Shapes and Geometries

### Applications and Technical Data

#### Two Material Types

##### Silicone Rubber

Rugged, moisture- and chemical-resistant material easily can be bonded to parts for effective heat transfer. Watlow silicone rubber heaters handle temperatures up to 500°F (260°C). Many heater styles are available with UR®, cUR®, VDE and CE recognition.

##### Polyimide

Polyimide is a thin, lightweight transparent material designed for precise heating requirements ranging from -319 to 392°F (-195 to 200°C). It is ideal for applications requiring low outgassing in a vacuum or resistance to radiation, fungus and chemicals. Many custom heaters can be UR® and cUR® recognized.

#### Two Element Types

Watlow offers wire-wound and etched foil resistance elements for silicone rubber heaters. Watlow can recommend the type best suited to your application.

##### Wire-Wound Elements

This element style is created by spiraling fine resistance wires around a fiberglass cord. The element is laid out in a pattern designed for a specific application. The benefits of wire-wound elements include:

- Excellent physical strength and flexibility. Repeated heater flexing has no harmful effects on its performance
- The ability to conform easily to curved surfaces, including small radius bends

Semiconductor pump line heaters are typical examples of applications that use the wire-wound method. These heaters are flexed repeatedly during removal and installation, but due to their wiring, no internal damage occurs.

##### Etched Foil Elements

This element type is created by acid etching a circuit in nickel alloy resistance foil. It is available in silicone rubber and polyimide heater types. The etched foil element is known for its excellent circuit pattern repeatability and superior heat transfer, which results from greater coverage of the element. Other benefits include:

- Delivery of more heat and up to twice the watt density of a wire-wound element provides longer heater life
- Complex heat distribution patterns

The etched foil element style is usually recommended for applications requiring high temperatures, watt densities, or multiple zoning.

# Flexible Heaters

## Silicone Rubber Heaters

Rugged, yet thin, lightweight and flexible — use of Watlow® silicone rubber heaters is limited only by the imagination. Heat can be put exactly where it is needed to improve heat transfer, speed warm ups and decrease wattage requirements in an application process.

Fiberglass-reinforced silicone rubber provides dimensional stability without sacrificing flexibility. Because very little material separates the element from the part, heat transfer is rapid and efficient. Heaters are constructed with a wire-wound element or with an etched foil element. Its thin construction allows it to fit into applications where space is limited.

### Performance Capabilities

- Operating temperatures up to 500°F (260°C)
- Watt densities up to 80 W/in<sup>2</sup> (12.5 W/cm<sup>2</sup>), dependent upon application temperature
- Wire-wound element thickness — 0.055 in. (1.4 mm)
- Etched foil element — 0.022 in. (0.56 mm)
- UR®, cUR®, VDE and CE recognitions are available on many designs up to 428°F (220°C)

### Features and Benefits

#### Designed to the exact shape and size needed

- Conforms to component and/or equipment

#### More than 80 designs available immediately from stock

- Reduces downtime

#### Constructed with wire-wound or etched foil elements

- Enables a thin, lightweight heater
- Provides the desired flexibility for many dynamic applications
- Delivers low mass and easily repeatable distributed watt densities

#### Moisture and chemical-resistant silicone rubber material

- Provides longer heater life

#### Vulcanizing adhesives or fasteners

- Allows heaters to be easily bonded to parts

### Typical Applications

- Semiconductor processing equipment
- Freeze protection and condensation prevention for many types of instrumentation and equipment
- Medical equipment such as blood analyzers and test tube heaters
- Computer peripherals such as laser printers
- Curing of plastic laminates
- Photo processing equipment

# Flexible Heaters

## Silicone Rubber Heaters

### Mounting Methods

Watlow offers various attachment techniques designed for fast installation.

#### Pressure Sensitive Adhesive Surface (PSAS)

For speed, convenience and economy of installation, specify PSAS. Simply peel off the protective backing and roll the heater in place for an even bond to a clean, smooth surface. PSAS is not recommended for curved surfaces or for heaters rated above 10 W/in<sup>2</sup> (1.5 W/cm<sup>2</sup>). It should not be used for applications exceeding 400°F (205°C) on silicone rubber and 300°F (150°C) on polyimide.

**Note:** PSAS has a maximum six-month storage life at or below 86°F (30°C) before heater installation.

#### Field Applied Adhesive

For a stronger bond or when long storage is probable, room temperature vulcanizing (RTV) silicone adhesive works well. Watlow offers red RTV for temperatures up to 500°F (260°C). White RTV is available from adhesive suppliers for temperatures up to 400°F (205°C). Watlow's one-part RTV is self-priming and can be ordered in either 3 oz (90 ml) or 12 oz (355 ml) tubes. For larger heaters requiring longer adhesive working time, two-part RTV kits can be purchased from adhesive suppliers. These kits require primer on the surface prior to adhesive application.

**Note:** Not recommended for polyimide heaters.

#### Silicone Contact Cement Kit

This two-part adhesive consists of a resin and catalyst that are easily mixed together and applied with a paintbrush. Recommended usage is for field cementing of silicone rubber heaters to customer parts. Available for immediate delivery, the cement kit handles temperatures up to 350°F (175°C). The resin is available in pint or quart containers. To order, specify **silicone contact cement** and the container size.

#### Mechanical Fasteners

When a wire-wound flexible heater must be detachable, any type of fastener normally used with fabrics can usually be built into the flexible heater's sheath material. The most common types are latch fasteners, boot hooks and grommets. Other styles include snap fasteners, springs and lacing cord. (Hook and loop style fastener strips are only available as part of the extended capabilities offering.) Grommets and boot hooks are commonly used with tension springs to compensate for slight variations in part size.

# Flexible Heaters

## Silicone Rubber Heaters

### Termination Styles

Watlow offers many types of leads and terminations. Leads can project from any position along the perimeter of the unit. **They are centered on the short side width of rectangular heaters unless specified.**

### PTFE UL® 1180 CSA

Watlow's leads are 12 in. (305 mm) long, white, PTFE insulated, flexible, plated copper UL® 1180 CSA wire. Leads are rated for 392°F (200°C)/300V. Lead connections on or at the heater are insulated with a cap of sheath material vulcanized to the heater body.

### PTFE Leads

PTFE Type E (MIL-W-16878) and PTFE UL® 1199 leads rated for 392°F (200°C)/600V are also available.

### Silicone Insulated Leads

For a better moisture seal, specify UL® silicone insulated lead wires. This lead type is rated for 302°F (150°C)/600V. Any lead length is available. **Note:** Silicone rubber heaters are not designed to be waterproof. Excess exposure to moisture may facilitate premature heater failure.

### Option

#### Thermal Insulation

To increase heating efficiency of your application, silicone rubber heaters can be thermally insulated with silicone sponge rubber bonded to one side in the following thicknesses: 1/16, 1/8, 1/4, 3/8 or 1/2 in. (1.6, 3.2, 6, 9.5 or 13 mm).

An aluminized surface can be added to the back side of the heater to reduce radiated heat losses. This aluminized surface, called "low loss treatment," adds very little to the unit thickness or mass and maintains a very clean appearance.

# Flexible Heaters

## Silicone Rubber Heaters

### Applications and Technical Data

#### Determining Watt Density

The *Maximum Allowable Watt Density* graph illustrates the maximum recommended heater watt density at various metal parts or ambient air temperatures. However, it does not indicate the watt density necessary to achieve a given part temperature. See the *Surface Temperature vs. Time* graph on the next page for assistance with these calculations. When using this graph, consider:

- Part temperature is measured at the point where the heater contacts the metal part.
- Thermostats and on-off controllers are typically bimetal or capillary bulb.
- Non-cycling controllers are typically solid state, time-proportioning or silicone controlled rectifier (SCR) temperature controllers.

- Watt density values should be de-rated by one third if insulation is used.
- UL® recognition temperature limits are not detailed.
- Contact your Watlow representative prior to selecting high watt density etched-foil elements, or operating heaters with back side insulation or non-metallic parts which are poor thermal conductors.

**Example:** A wire-wound heater with a non-cycling controller at a part temperature of 250°F (120°C) can be rated at 24 W/in<sup>2</sup> (3.7 W/cm<sup>2</sup>) maximum. An etched foil heater operating under the same conditions can be rated at 45 W/in<sup>2</sup> (7 W/cm<sup>2</sup>) maximum.

#### Silicone Rubber Specifications

##### Max. width x max. length

- Wire wound: 36 x 120 in. (914 mm x 3048 mm)
- Etched foil: 18 x 34 in. (457 mm x 863 mm)

##### Thickness

- Wire wound: 0.055 in. (1.4 mm)
- Etched foil: 0.022 in. (0.6 mm)

##### Weight

- Wire wound: 8 oz/ft<sup>2</sup> (0.24 g/cm<sup>2</sup>)
- Etched foil: 3 oz/ft<sup>2</sup> (0.09 g/cm<sup>2</sup>)

**Max. operating temperature:** 500°F (260°C)

**Max. temperature for UL® recognition:** 428°F (220°C)

**Min. ambient temperature:** -80°F (-62°C)

**Max. voltage:** 600V

**Max. wattage:** see watt density graph

**Lead size:** sized to load

**Lead length:** 12 +1½ -1½ in. (305 mm +38 mm -13 mm)

##### Wattage tolerance

- Wire: ±5%
- Foil: +5% -10%

##### Dimensional tolerances

- 0 to 6 in. (0 to 152 mm): ±1/16 in. (1.59 mm)
- 6 to 18 in. (152 to 457 mm): ±1/8 in. (3.18 mm)

- Over 36 in. (914 mm): ±1%

# Flexible Heaters

## Silicone Rubber Heaters

### Applications and Technical Data (Continued)

#### Surface Temperature vs. Time

This graph illustrates the surface temperature a silicone rubber heater will reach when uninsulated and suspended vertically in 70°F (20°C) still air.

Data is based on 0.055 in. (1.4 mm) thick construction and is offered as a reference tool.

#### UR®, cUR®, VDE and CE Recognition for Silicone Rubber Heaters

Watlow frequently works with customers requiring agency approvals such as UR®, cUR®, VDE and CE. Many silicone rubber heaters are available with one or more certifications.

**UL® Component Recognition (UR®)** of factory-bonded heaters is available up to 392°F (200°C) and for customer installed heaters up to 428°F (220°C) (UL® File No. E52951).

For Canadian recognition, Watlow offers **cUR® Recognized** silicone rubber heaters under UL® File #E52951. Several constructions are available with ratings to 600V and 428°F (220°C) maximum surface temperature. Contact your Watlow representative for further information.

**VDE Approval** is available on several constructions of both wire-wound (File No. 62533) and etched foil (File No. 62535) silicone rubber heaters. Maximum ratings are 440V and 428°F (220°C) surface temperature. Under VDE guidelines, minimum installed bend radius is 1/8 in. (3.2 mm) for etched foil and 1/4 in. (6 mm) for wire wound. VDE states that the user is responsible for the safe application, installation and wiring of heaters. Maximum working temperature must be maintained by an appropriate temperature controller.

The **CE mark** is available on UR® and/or VDE recognized heaters.

#### Options

Watlow offers options including attachment techniques, thermostats, special leads, holes and cutouts and three-dimensional shapes as described in the introduction to flexible heaters section.

## Extended Capabilities For Silicone Rubber Heaters

### Mounting Methods

#### Factory Bonding

This attachment technique provides a strong, void-free bond for excellent heat transfer and extended heater life that has proven to be successful. Bonding is recommended for applications that reach maximum temperatures of 500°F (260°C) on silicone rubber and 300°F (150°C) on polyimide.

### Termination Styles

#### HPN Cord and Plug Set

**Molded Leads are Shown Exiting Edge of Heater;  
Capped Leads are also Available.**

For removable heaters, a 6 ft (1.8 m) HPN cord and plug set provides convenience. It is rated for 194°F (90°C)/300V. An HPN cord without a plug is also available in any length.

### Construction

#### Formed Heaters

Many three-dimensional shapes, such as cylinders, cones and boxes, can be factory formed. Semi-rigid shapes can self-grip to the part. Special tooling may be required for some designs.

#### Holes, Cutouts and Notches

Watlow provides flexible heaters with special holes, cutouts and notches in nearly any position required for your design. The resistance element can be brought to within 1/8 in. (3.2 mm) of all edges. Standard spacing is 1/4 in. (6 mm) from all edges.

\*1180VDE denotes a C-UL® heater plus a VDE stamp.

\*\*Not available on composite heaters due to amperage.

\*Customer specified length must be noted in inches when ordering.

\*For all thermostats, the heater must be a 2 in. min. width and a 5 in. min. length.

# Flexible Heaters

## Silicone Rubber Heaters

### Composite Bonding Applications

Watlow offers silicone rubber heaters commonly used for composite bonding and curing. The design includes equal length circuits and a no-heat tab for temperature uniformity. The contact surface is made using smooth silicone to prevent composite surface imperfections. The heaters are fiberglass reinforced to provide lasting field service durability and life.

### Performance Capabilities

- Watt density up to 5 W/in<sup>2</sup> (0.8 W/cm<sup>2</sup>)
- Voltage of 120VAC/240VAC (option) single phase
- UL® recognized

### Features and Benefits

#### Customized leads

- Allows up to 30 feet of lead length

#### Field service ease

- Enables on-site repairs

#### Equal length circuits — min. 2 x 2 in. (51 x 51 mm) tab with radius

- Creates temperature uniformity

#### Smooth contact surface

- Prevents composite surface imperfections

### Typical Applications

- Aerospace industry
  - Repair
  - Fabrication
- Composite bonding processes

## Line Heating

### Modular Gas Line Heaters

#### Gas Delivery

Tetraethyl orthosilicate (TEOS), boron trichloride ( $\text{BCl}_3$ ), aluminum chloride ( $\text{AlCl}_3$ ), chlorine trifluoride ( $\text{ClF}_3$ ) and dichlorosilane (DCS) are gases that condense or liquefy due to a phase shift at low temperatures. In semiconductor processes, condensation occurs in the gas line and puddles in the shower head before being injected into the vacuum chamber. A substantial number of wafer defects will occur if liquefied gases are injected into the vacuum chamber. Uniform heating of the lines will prevent condensation. TEOS lines are typically heated above 194°F (90°C) and  $\text{BCl}_3$  above 86°F (30°C), depending on pressure and flow rate. The optimum line temperature will vary depending on the process parameters.

#### Specifications

- Watt density of 2.5 W/in<sup>2</sup> (0.4 W/cm<sup>2</sup>) on gas line O.D.
- UL<sup>®</sup> recognized for U.S. and Canadian safety standards
- Heaters and insulators meet UL<sup>®</sup> 94-HB flammability requirements
- Insulated straight fillers for 100 percent line coverage; elbows and tees are trim-to-fit to proper length
- I.D. available: 1/4, 3/8, 1/2, 3/4 in. (6, 9.5, 13, 19 mm)
- 120V standard, other voltages available
- Small metal snaps
- Heaters are insulated with a 3/8 in. (9.5 mm) wall, silicone rubber, closed cell sponge

#### Upstream Gas Line Heater Assembly (Example)

- ① 9 in. (229 mm) heater with thermocouple. Heater leads have a male plug on one end and a female cap on the other end. Heater materials are UL<sup>®</sup> rated to 392°F (200°C)
- ② 6 in. (152 mm) heater, heater leads, see 1
- ③ Union tee insulator
- ④ 90° union elbow insulator
- ⑤ Male plug, AMP MATE-N-LOK<sup>™</sup> connector part number 1-480698-0; with sockets AMP MATE-N-LOK<sup>™</sup> connector part number 350689-1
- ⑥ Female cap, AMP MATE-N-LOK<sup>™</sup> connector part number 1-480699-0; with pins AMP MATE-N-LOK<sup>™</sup> connector part number 350690-1
- ⑦ Valve or regulator
- ⑧ Y connector: one female cap on one end, two male plugs on the other end
- ⑨ Dead plug (sealed)
- ⑩ Type J thermocouple w/ male mini-plug (optional)

- Sensor pocket thermocouple: 12 in. (305 mm) long, Type J or K, #24 AWG
- Two-prong mini-plug connector

# Flexible Heaters

## Line Heating

### **STRETCH-TO-LENGTH® Heaters**

During semiconductor processes, condensation of many critical gases occurs due to a phase shift at low temperatures. Burning of gases occurs if the delivery line is too hot. High or low temperature conditions may result in undesirable particulates, costly device defects and tool maintenance.

The Watlow STRETCH-TO-LENGTH® (S-T-L) gas line heater system is an easy-to-assemble temperature solution that delivers superior performance compared to heat tape. The heater's preformed construction allows an engineer to easily wrap it around the delivery line. It provides consistent heater/gas line contact to improve temperature uniformity. Due to its flexibility, the S-T-L gas line heater can compensate for variable component sizes to reduce the potential for hot and cold spots.

The S-T-L system includes a 2 W/in<sup>2</sup> S-T-L heater and silicone foam rubber insulation.

### **Features and Benefits**

#### **Easy to install two-part system**

- Conveniently fits most gas line configurations

#### **Flexible heater design**

- Easily customize the thermal profile for each gas line application
- Allows quick prototyping to determine energy distribution requirements for process improvements

#### **Flexible standard system components**

- Eliminates unnecessary lead times for custom designs

#### **Agency Certification, Recognition Compliance and Approvals**

- Semi S2-93 compatible with a high-limit thermocouple and controller
- UL® recognized for U.S. safety standards

### **Typical Applications**

#### **Gas delivery lines**

- Boron trichloride, BCl<sub>3</sub>
- Chlorine trifluoride, ClF<sub>3</sub>
- Dichlorosilane, (DCS), SiH<sub>2</sub>Cl<sub>2</sub>
- Tetra ethyl orthosilicate, TEOS
- Tungsten hexafluoride, WF<sub>6</sub>
- Process gas line qualification

### **Specifications**

- Heater material is reinforced silicone rubber fabric
  - Color:
    - Insulation and outer jacket – orange
    - Heater – orange
- Clean room strap fasteners
- Voltage: 120 and 240VAC
- Max. operating temperature: 392°F (200°C)
- Heater watt density: 2 W/in<sup>2</sup> (0.31 W/cm<sup>2</sup>) – Watlow recommends 80% line wrap for optimum performance
- Power lead wires: 12 in. (305 mm); #18 AWG UL® 1180 CSA, rated 10A, lead wire pair encapsulated in reinforced silicone rubber sleeving
- Heater interconnectable up to a 10A circuit
- Material rated UL® 94-HB
- Heater materials are UL® rated to 392°F (200°C)
- Insulation:
  - 3/8 in. (9.5 mm) wall, silicone rubber, closed cell sponge
  - Jacket material is reinforced silicone rubber fabric

# Flexible Heaters

## Line Heating

### STRETCH-TO-LENGTH Heaters (Continued)

S-T-L heaters are specified by their straight length. For actual applications, an engineer can wrap the heaters to achieve an optimum temperature profile. Coverage lengths of approximately 60 and 80 percent on ¼ in. (6 mm) and ½ in. (13 mm) diameter tubes are provided

as a guide to select heater lengths for actual gas line dimensions. A gas line with 100 percent coverage is approximately 2 W/in<sup>2</sup>, 80 percent coverage 1.6 W/in<sup>2</sup> or 60 percent coverage 1.2 W/in<sup>2</sup>.

#### Extensions

Description	Part Number
3 ft (914 mm)	<b>A000136</b>
6 ft (1829 mm)	<b>A000137</b>
10 ft (3048 mm)	<b>A000138</b>

#### Accessories

Description	Part Number
Power cord 6 ft 18-2 SJ	<b>Z5302-2</b>
Wiring Y connector – 1F-2M	<b>Z5303-2</b>
Wiring Y connector – 1M-2F	<b>Z6333</b>
Female termination plug	<b>Z5309-2</b>
Male termination plug	<b>Z6332</b>
12 in. 24 Ga. Type J T/C w/mini plug	<b>Z5786</b>
12 in. 24 Ga. Type K T/C w/mini plug	<b>Z5639</b>
Gender changer – M-F	<b>Z6334</b>
Gender changer – F-M	<b>Z6335</b>
6 in. power extension	<b>Z6374</b>
10 ft Type J T/C extension	<b>Z6271</b>

**Note:** All power connectors use AMP MATE-N-LOK™

# Flexible Heaters

## Line Heating

### Modular Pump Line Heaters

The tight contact fit of Watlow's pump line heaters provide superior, uniform heating of transfer lines.

### Agency Certification, Recognition Compliance and Approvals

- Complies with SEMI S2-93 standards
- UL® recognized for U.S. and Canadian safety standards
- CE, VDE
- National Electrical Code (NEC), Article #427-23
- UL® Listed available

Contact your Watlow representative for specific applications and approvals.

### General Specifications

- The heater and jacket material are constructed using reinforced silicone rubber fabric.
- Insulation and outer jacket are gray. The heater is red-orange in color.

**Sensor Pocket Built-in to all Straight Length Heaters 3 in. (76 mm) Long and Greater; One Per Heater**

- Snap type fasteners are ½ in. (13 mm) with a nominal diameter metal construction and a nylon cover. The maximum operating temperature is 392°F (200°C).
- Hook and latch fasteners are available.
- 120 and 208VAC are standard. Contact your Watlow representative for other voltages.
- Power lead wires are 3 in. (76 mm) #18 AWG UL® 1180/CSA PTFE insulated and rated 10A. The lead wire pair is encapsulated in reinforced silicone rubber sleeving.
- Heaters are interconnectable up to a 10A circuit.
- Low watt density:
  - 1.5-2 in. (38-51 mm) diameter, 1.5 W/in<sup>2</sup> (0.23 W/cm<sup>2</sup>)
  - 3-4 in. (76-102 mm) diameter, 1.25 W/in<sup>2</sup> (0.19 W/cm<sup>2</sup>)

# Flexible Heaters

## Polyimide Heaters

Polyimide is a thin, lightweight organic polymer film that provides excellent tensile strength, tear and solvent resistance and dimensional stability. The polyimide heater is ideal for applications requiring low outgassing in a vacuum or resistance to radiation, fungus and chemicals.

### Performance Capabilities

- For operating environments as low as -319°F (-195°C), heater temperature as high as 392°F (200°C)
- Watt densities up to 50 W/in<sup>2</sup> (7.75 W/cm<sup>2</sup>)<sup>①</sup>
- UR<sup>®</sup> and C-UR<sup>®</sup> recognitions

### Features and Benefits

#### Excellent physical and electrical properties

- Results in thermal stability over a wide temperature range

#### Transparent polyimide material

- Allows inspection of internal details

#### Resistance of radiation and fungus

- Can be used in a wide range of applications

### Typical Applications

- Medical applications that require a clean, sterile environment
- Laboratory research
- Semiconductor processing equipment
- Optical equipment
- LCD displays
- Computer equipment
- Photographic equipment
- Aerospace/defense, where low outgassing properties are required

<sup>①</sup> Watt density limits are application dependent (operating temperatures, bonding method and heat sink).

# Flexible Heaters

## Polyimide Heaters

### Technical Data

#### Specifications

##### Thickness

- 0.007 in. (0.2 mm)

##### Flexibility (min. radius)

- $\frac{1}{32}$  in. (0.8 mm)

##### Weight

- 1.5 oz/ft<sup>2</sup> (0.05 g/cm<sup>2</sup>)

##### Operating temperature:

- Max.: 392°F (200°C)
- Min.: -319°F (-195°C)

##### Watt density rating on stock units

- 5 W/in<sup>2</sup> (0.8 W/cm<sup>2</sup>)

##### Dielectric strength

- Min. VAC: 1000

##### Flammability rating

- Self-extinguishing

##### Heater size limitations

- 18 x 26 in. (457 mm x 660 mm)

##### Weight loss (outgassing):

- 0.51%

##### Lead length

- 12 in. (305 mm) PTFE E

## Maximum Allowable Watt Density Versus Temperature

To achieve optimum performance with your Watlow polyimide heater, use a proper watt density on the surface of the heater.

The graph recommends watt densities for temperatures using a temperature controller. It does not indicate the watt density needed to achieve a given part temperature.

**Note:** The maximum watt density (W/in<sup>2</sup>) in open air is 5 W/in<sup>2</sup>. The chart above assumes bonding the polyimide heater to a part.

K05711980-P	1 x 1 3/8	(25 x 34.9)	P	45	24	13

**Note:** Above heaters are shipped without power leads unless specified, see below.

### Options

- **Pressure sensitive adhesive (PSAS) surface**
- **Polyimide Handy Heater Kit—For Quick Heating Solutions**
  - Watlow offers a convenient polyimide heater kit which consists of 16 polyimide heaters — 13 rectangular and three circular—in different sizes and resistances. When a small flexible heater is needed quickly, the correct heater that fits the application can be used.

#### Notes:

- **Example:** To order the J heater circuit with PSAS, use K05711980A-J.  
To order the J heater circuit with PSAS and leads, use K05711980AL-J.
- Leads are shipped loose, not soldered. Leads are 12 in. (305 mm) “E” PTFE.

### Other Features

- The heater sheet can be ordered with or without PSAS, depending on requirements. To specify PSAS add **A** to the part number.
- The kit includes instructions for wiring, lead attachment, selection and installation. Pre-tinned solder pads are provided for easy lead connections.
- Instructions show how to dial in the desired wattage using a variable voltage transformer.
- Heaters can be wired individually, in series or in parallel, for hundreds of variations to satisfy special applications.

# Flexible Heaters

## SERIES EHG®

Many applications requiring a fixed temperature set point rely on a mechanical thermostat for thermal control. Thermostats have proven, however, to be inadequate for many applications due to long-term reliability issues, such as 100,000 cycle rating and poor temperature control.

The SERIES EHG® thermal solution includes a compact temperature controller, thermocouple sensor and power switching device integrated into the heater's power cord. The SERIES EHG reduces system costs and lasts substantially longer than a conventional thermostat solution.

The evolution of miniature microprocessor technology and Watlow switching technology fostered development of a small, versatile temperature controller and thermocouple sensor that is integrated with Watlow silicone rubber heater products. This device senses the temperature via input from a thermocouple strategically placed on the heater mat. The microprocessor is programmed prior to shipment with an application specific set point. This results in quick delivery of a custom, integrated system.

The small thermocouple mass provides superior response to changes in process temperature enabling higher watt density silicone rubber heater designs. These features offer an integrated custom set point temperature controller with superior life span, faster heat-up rates and improved accuracy. The SERIES EHG system has been tested to over four million cycles at rated amperage. Depending on the application, Watlow's power switching design can last up to 40 times longer than a conventional thermostat.

### Features and Benefits

#### Long operational life

- Improves system reliability

#### Tight temperature control

- Ensures process accuracy

#### Small sensor footprint

- Fits with almost any heater
- Responds quickly to temperature changes
- Controls high watt densities in low mass applications

#### A single EHG controller can be configured with multiple heaters

- Reduces system cost

#### Pre-wired, in line control

- Simplifies installation
- Offers two-wire power connection

#### Durable housing with built-in strain relief

- Protects electronics
- Provides low risk of mechanical damage

#### Manufactured with proven Watlow components

- Assures reliable system performance

### Typical Applications

- Semiconductor processing
- Aerospace composite repair
- Foodservice equipment
- Freeze protection
- Life sciences
- Telecommunications

## SERIES EHG

### Technical Information

#### Specifications

##### Operational

- SERIES EHG silicone rubber heater UL<sup>®</sup> recognized to 428°F (220°C) operating temperature
- Factory programmed fixed set point
- On-off control with 6°F (3°C) switching hysteresis
- Temperature band LED indicator ON between -68 and +68°F (-20 and +20°C) of set point

##### Electrical

- Voltage rating: 120 or 240VAC – 30/+10%, 50/60Hz
- Silicone rubber heater watt densities up to 80 W/in<sup>2</sup> (12.5 W/cm<sup>2</sup>) dependent on application temperature
- SERIES EHG system UL<sup>®</sup> recognized to 10A max.

##### Sensor

- Type K thermocouple

##### Mechanical

- Control dimensions 3.75 in. (95 mm) long by 1.75 in. (45 mm) diameter
- Heater per silicone rubber heater specifications

##### Agencies

- Silicone rubber heater: UL<sup>®</sup> recognized File #E52951
- SERIES EHG control: TUV File DE 3-3068 to EN 61010-1:2001, UL<sup>®</sup> File E43684 to UL<sup>®</sup> 873 temperature indicating and regulating equipment

##### Environmental

- Control operating temperature range 32 to 158°F (0 to 70°C)
- Control storage temperature range -40 to 158°F (-40 to 70°C)

Contact your Watlow representative for custom configurations.

### SERIES EHG Versus Thermostat (typical application)

### Dimensions

### Integrated SERIES EHG System Versus Integrated Thermostat System

	Integrated EHG System	Integrated Thermostat System	SERIES EHG Benefit
Life comparison at rated amperage	Tested to greater than 4,000,000 cycles with 10A load	Rated 100,000 cycles	Longer product life of SERIES EHG system and high application reliability
Switch hysteresis	6°F (3°C)	15°F (8°C)	Provides superior process control
Improved response time reduces overshoot on start-up	6°F (3°C) typical	25°F (14°C) typical	Responds to temperature changes faster than a thermostat
Warranty	2 years for material and workmanship	1 year on material and workmanship	Warranty can be extended due to longer life cycle
Zero cross switching	SERIES EHG has zero cross switching	Random switching during sign wave cycle	Reduces the possibility of electrical mechanical interference (EMI)

## SERIES EHG SL10

The SERIES EHG SL10 integrated, multi-function controller is a key component to a powerful system that integrates a heater, an adjustable set point temperature controller, a high/low temperature alert, a power switching device and a high temperature safety limit. Its agency recognized controller/safety limit meets UL® 1998 and CE 60730 requirements.

An optional display/communications module can be easily added in the field to provide a digital display indication, an adjustment of set point, RS485 Modbus® communications and other Human Machine Interface (HMI) features. As a scalable system, only what is needed can be purchased.

The EHG SL10 controllers' easy to install, compact design, inherent reliability and integrated limit functions offer unmatched value. It is designed for easy integration with Watlow heaters to simplify engineering, reduce component count for new equipment and decrease ownership cost. For original equipment manufacturers, (OEMs), CE, Semi-S2 compliance and UL® recognition, the EHG controller reduces time and costs associated with global agency testing and validation.

### Features and Benefits

#### Process controller and safety limit in one package

- Meets UL® 1998 and CE 60730 requirements
- Eliminates the need for a thermal fuse on a heater
- Eliminates replacement of heater when fuse fails

#### Optional display/communications module

- Allows easy upgrade on to base device
- Offers low cost field upgrade
- Provides easy, snap-on installation

#### Accurate and flexible temperature process controller

- Replaces problematic bi-metal thermostats with accurate electronic temperature process controller
- Allows easy change of process parameters

#### Ambient operating temperature range 32 to 158°F (0 to 70°C)

- Increases reliability when mounting in harsh temperature environments or in close proximity to heaters

#### Integrated high/low temperature alert signal relay

- Provides dry contact output to activate external alarm or process function
- Signals control status with three integrated LEDs
- Allows a signal of up to two amperes 30VAC/VDC, Form A to alert if process temperature is out of range limits

#### Health check diagnostics

- Monitors maximum heater process temperature, maximum ambient temperature and thermocouple operation
- Provides health check signal to inform operator that the process is working correctly

#### Universal power supply

- Allows an input of 85 to 264VAC, 50/60Hz
- Provides safe control of up to 2400 watts with 10 amperes switching in both controller and safety limit

#### Can be switched from on-off and PID algorithm

- Increases product life (on-off control is default)
- Offers selectable PID control algorithm for tighter temperature uniformity

#### Universal 1/8 turn mounting bracket

- Allows mounting to most surfaces
- Provides flexible mounting—either horizontally or vertically

### Typical Applications

#### Foodservice equipment

- Warming and serving equipment
- Food holding cabinets

#### Life sciences

- Laboratory equipment
- Medical equipment

#### Packaging

- Heat sealing bars
- Hot glue application equipment

#### Semiconductor processing

- Gas delivery lines

# Flexible Heaters

## SERIES EHG SL10

### Technical Information (Continued)

#### EHG SL10 Software

With the addition of an optional communication module, the EHG SL10 can be managed, monitored and manipulated via software. Change set points, label devices, change tuning parameters, check health status and much more all with the click of a key.

#### Reduces System Complexity and Cost

#### Mounting Bracket

The EHG SL10 mounting enables the controller to be mounted in four angles.

The EHG SL10 can be "daisy-chained" for gas line and other assemblies.

## SERIES EHG CL

### Technical Information (Continued)

#### EHG CL Software

With the addition of an optional communication module, the EHG CL can be managed, monitored and manipulated via software. Change set points, label devices, change tuning parameters, check health status and much more all with the click of a key.

#### Optional Upgrade Modules

These upgrade modules are easy to install. There is no need to reconfigure, rewire or reorder the base unit. A technician is not needed for the installation, resulting in a seamless, cost-efficient system that can be upgraded.

## Ordering Information

### Part Number

1	2	3	4	5	6	7	8	9
265 EG3						Base/ Module		

7	8	9	Base/Module
001	=		Base unit (extended temperature range)
002	=		Display module (extended temperature range)
003	=		Communications module (extended temperature range)
004	=		Display with communications module (extended temperature range)

### Additional cables for wiring parallel heater circuits (daisy-chaining) in gas line and other assemblies

- 4800-0012 - Long cable
- 4800-0022 - Long terminating cable
- 4800-0011 - Short cable
- 4800-0021 - Short terminating cable

## Availability

The EHG CL is available for shipment; please contact your Watlow representative for more information.

The EHG CL can be "daisy-chained" for gas line and other assemblies.

## Mounting Bracket

The EHG CL mounting enables the controller to be mounted in four angles.

# Immersion Heaters

## WATROD™ and FIREBAR® Screw Plug Immersion Heaters

Screw plug immersion heaters are ideal for direct immersion heating of liquids, including all types of oils and heat transfer solutions.

Available in a variety of sizes, Watlow® screw plug immersion heaters feature both WATROD™ round and FIREBAR® flat tubular elements.

Heating elements are hairpin bent and either welded or brazed into the screw plug—depending on element sheath and plug material compatibility.

General purpose terminal enclosures are standard; with optional moisture resistant, explosion resistant and explosion/moisture resistant enclosures available to meet specific application needs.

Optional thermostats provide convenient process temperature regulation.

### Performance Capabilities

- Watt densities up to 120 W/in<sup>2</sup> (18.6 W/cm<sup>2</sup>)
- Wattages up to 38 kilowatts
- UL® and CSA component recognition up to 480VAC and 600VAC respectively
- Alloy 800/840 sheath temperatures up to 1600°F (870°C)
- Passivated 316 stainless steel sheath temperatures up to 1200°F (650°C)
- 304 stainless steel sheath temperatures up to 1200°F (650°C)
- Steel sheath temperatures up to 750°F (400°C)

### Features and Benefits

#### A variety of element sheath and screw plug materials

- Meets your application needs

#### Integral thermowells

- Provides convenient temperature sensor insertion and replacement without draining the fluid being heated

#### Terminal enclosures

- Provides ability to be rotated to simplify connection with existing conduits

#### Welding or brazing WATROD and FIREBAR elements to the screw plug

- Provides a pressure tight seal

#### WATROD hairpins are repressed (recompacted)

- Maintains MgO density, dielectric strength, heat transfer and life

#### 2 1/2 in. (64 mm) NPT screw plug assemblies feature element support(s)

- Ensures proper spacing for maximizing heater performance and life

#### • Screw plug and element sizes:

1 in. NPT	0.260 and 0.315 in. WATROD
1 1/4 in. NPT	0.260 and 0.315 in. WATROD 1 in. FIREBAR
2 in. NPT	0.430 and 0.475 in. WATROD
2 1/2 in. NPT	0.430 and 0.475 in. WATROD 1 in. FIREBAR

#### • Phase capability:

1 in. NPT	1-Phase
1 1/4, 2, 2 1/2 in., NPT	1- or 3-Phase

UL® and CSA component recognition under File E52951 and 31388 respectively, see pages 561 to 568 for details.

# Immersion Heaters

## WATROD and FIREBAR Screw Plug Immersion Heaters

### Typical Applications

- Water:
  - Deionized
  - Demineralized
  - Clean
  - Potable
  - Process
- Industrial water rinse tanks
- Vapor degreasers
- Hydraulic oil, crude, asphalt
- Lubricating oils at API specified watt densities
- Air and gas flow
- Caustic solutions
- Chemical baths
- Anti-freeze (glycol) solutions
- Paraffin

### Screw Plug Orientation

Correct element/thermowell orientation assures proper process temperature sensing.

Correct horizontal mounting of WATROD and FIREBAR screw plugs is shown below. Correct orientation assures optimum performance and maximum heater life. Additional mounting information is provided in the *Installation and Maintenance Instructions*.

### FIREBAR Heating Elements

#### 1 1/4 in. (32 mm) NPT—One Element

#### 2 1/2 in. (64 mm) NPT—Three Elements

### WATROD Heating Element

#### 1 in. (25 mm) NPT—One Element

#### 1 1/4 in. (32 mm) and 2 in. (51 mm) NPT—Two Elements

#### 2 in. (51 mm) and 2 1/2 in. (64 mm) NPT—Three Elements

# Immersion Heaters

## WATROD and FIREBAR Screw Plug Immersion Heaters

### Options

#### Terminal Enclosures

General purpose terminal enclosures, without thermostats, are available on all screw plug immersion heaters. To meet specific application requirements, Watlow offers the following optional terminal enclosures:

- General purpose with single- or double-pole thermostat
- Moisture-resistant or corrosion resistant—available with optional single- or double-pole thermostat
- Non-certified, explosion-resistant suitable for use in non-classified areas only—available with optional single or double-pole thermostat
- Non-certified, explosion and moisture-resistant combination suitable for use in non-classified areas only—available with optional single- or double-pole thermostat

**Note:** Unless otherwise stated on the accompanying illustrations, both WATROD and FIREBAR screw plugs are centered on the terminal enclosure. To order, add the suffix letter(s) to the screw plug heater's base part number. This is depicted on the ordering example on page 234. Also, specify class and group, if applicable.

#### CSA Certified Enclosures

These enclosures are suitable for Class 1, Groups B, C and D classified areas. CSA certified moisture and/or explosion-resistant terminal enclosures protect wiring in hazardous gas environments. These terminal enclosures, covered under CSA File number 61707, are available on all WATROD and FIREBAR screw plug immersion heaters. For additional information, contact your Watlow representative.

To order, specify **CSA certified enclosure**, **process temperature** (°F), maximum **working pressure** of application (psig), **media** being heated and heater **mounting orientation** (horizontal or vertical) and **screw plug size**.

#### Pilot Light

The optional pilot light gives the operator visual indication of heater on or off power status.

The PL10 pilot light is configured to a maximum 250VAC and supplied with 6 in. (152 mm) leads.

The PL11 pilot light is rated for 480VAC and supplied with 4 in. (102 mm) leads.

Pilot lights may be attached to either single- or double-pole thermostats with general purpose enclosure only.

#### Thermostats

To provide process temperature control, Watlow offers optional single-pole, single-throw (SPST) and double-pole, single-throw (DPST) thermostats.

Unless otherwise specified, thermostats are mounted inside the terminal enclosure. For details and ordering information, refer to *Thermostats* on pages 534 to 538. Please verify that the thermostat's sensing bulb O.D. is compatible with the screw plug's thermowell I.D.

#### Caution:

Certified explosion-resistant terminal enclosures are intended to provide explosion containment in the electrical termination/wiring enclosure only. No portion of the assembly outside of this enclosure is covered under this enclosure rating. Enclosure rating effectiveness may be compromised by abuse or misapplication.

# Immersion Heaters

## WATROD and FIREBAR Screw Plug Immersion Heaters

### Options (Continued)

#### Thermocouples

Type J or K thermocouples offer extremely accurate sensing of process and/or sheath temperatures. A thermocouple may be inserted into the thermowell or attached to the heater's sheath.

Thermocouples are supplied with 120 in. (3048 mm) leads (longer lead lengths available). Unless otherwise specified, thermocouples are supplied with temperature ranges detailed on the *Thermocouple Types* chart.

Using a thermocouple requires an appropriate temperature and power controller and these must be purchased separately. Watlow offers a wide variety of temperature and power controllers to meet virtually all applications. Temperature controllers can be configured to accept process variable inputs, too. Contact your Watlow representative for details.

To order, specify **Type J** or **K** thermocouple and lead length. Indicate if the thermocouple is for **process temperature sensing** or heater sheath **high-limit protection**. Please specify if the screw plug will be mounted **vertical** or **horizontal** in the tank. **If vertical, indicate if the housing is on top or bottom.**

If the screw plug heater is mounted in an in-line circulation heating application, indicate flow direction relative to the heater's enclosure.

#### Thermocouple Types

ASTM Type	Conductor Characteristics		Recommended ① Temperature Range	
	Positive	Negative	°F	(°C)
J	Iron (Magnetic)	Constantan (Non-Magnetic)	0 to 1000	(-20 to 540)
K	Chromel® (non-magnetic)	Alumel® (Magnetic)	0 to 2000	(-20 to 1100)

① Type J and Type K thermocouples are rated 32 to 1382°F and 32 to 2282°F (0-750°C and 0-1250°C), respectively. Watlow does not recommend exceeding temperature ranges shown on this chart for the tubular product line.

#### Wattages and Voltages

Watlow routinely supplies screw plug immersion heaters with 120 to 480VAC as well as wattages from 250 watts to 38kW.

#### Sheath Materials

The following sheath materials are available on WATROD and FIREBAR heating elements:

##### Standard Sheath Materials

WATROD	Alloy 800/840
	316 SS
	Steel
FIREBAR	Alloy 800

##### Exotic Sheath Materials

Contact your Watlow representative for details and availability.

#### External Finishing

##### Passivation

During the manufacturing process, particles of iron or tool steel may become embedded in the stainless steel or alloy sheath. If not removed, these particles may corrode, produce rust spots and/or contaminate the process. For critical applications, passivation will remove free iron from the sheath. To order, specify **passivation**.

##### Other Finishes

Bright annealing available to meet cosmetic demands.

#### Screw Plug Materials

The following screw plug materials are available:

To order, specify **screw plug size** and **material**.

##### Standard Screw Plug Materials

WATROD	304 SS, Brass
	Steel
FIREBAR	304 SS

##### Made-to-Order Plug Materials

For both WATROD and FIREBAR, contact your Watlow representative about details and availability.

### RAPID SHIP

- RS - Next day shipment up to 3 pieces

#### Application Hints

- Select the recommended sheath material and watt density for the substance being heated. Use the *Supplemental Applications Chart* on pages 555 to 560. If unable to determine the correct heater material and type, contact your Watlow representative.
- Extend the element's no-heat section completely into the fluid being heated to help prevent premature heater failure. See illustration below for proper no-heat section placement.
- Locate screw plug heater low in the tank, but above the sludge level.

- Choose a FIREBAR element when the application requires a smaller system package or lower watt density.
- Ensure wiring integrity by making sure terminal enclosure temperature does not exceed 400°F (205°C).
- Keep electrical connections clean, dry and tight.
- Size power feeder wires in accordance with National Electrical Code guidelines and other applicable codes.
- Size power feeder wires in accordance with national electrical code guidelines and other applicable codes.
- Minimize problems associated with low liquid level conditions by using a low liquid level sensor or sheath temperature high-limit control.
- Periodically remove the screw plug assembly for inspection and clean the heating element(s). This preventive maintenance will reduce premature failure and optimize heater performance.
- Refer to the *Installation and Maintenance Instructions* for correct orientation of FIREBAR elements. Correct element orientation to flow minimizes pressure drop, increases buoyancy force and heater performance.

## Extended Capabilities For WATROD and FIREBAR Screw Plug Immersion Heaters

### Options

#### Pilot Light

The optional pilot light gives the operator visual indication of heater on or off power status.

The PL10 pilot light is configured to a maximum 250VAC and supplied with 6 in. (152 mm) leads.

The PL11 pilot light is rated for 480VAC and supplied with 4 in. (102 mm) leads.

Pilot lights may be attached to either single or double pole thermostats with general purpose enclosure only. For moisture or explosion resistant terminal enclosures, contact your Watlow representative.

To order, refer to the *Ordering Information* on page 234.

#### Wattages and Voltages

Watlow routinely supplies screw plug immersion heaters with 120 to 480VAC as well as wattages from 250 watts to 38kW. If required, Watlow may configure heaters with voltages and wattages outside these parameters. For more information on special voltage and wattage configurations, contact your Watlow representative.

#### Extended Sheath Materials

The following sheath materials are available on WATROD and FIREBAR heating elements:

##### Extended Sheath Materials

<b>WATROD</b>	304 and 321 SS Alloy 400 and 600 Titanium Hastelloy C276
<b>FIREBAR</b>	304 SS Alloy 800

#### Screw Plug Materials

The following screw plug materials are available:

To order, specify **screw plug size** and **material**.

##### Extended Screw Plug Materials

<b>WATROD</b>	304, 304H, 316H, 321 SS Titanium Alloy 400 and 600 Hastelloy C276 Alloy 800/840

### RAPID SHIP

- RS - Next day shipment up to 5 pieces

**Note:** All screw plug bundles are designed to fit the inside diameter of the equivalent mating coupling. They will not fit into the equivalent pipe inside diameter.

④ Wired for higher voltage

# Immersion Heaters

## WATROD and FIREBAR Screw Plug Immersion Heaters

### Application: Clean Water

- 2 inch NPT screw plug
- WATROD elements
- With thermostat (DPST)

**Note:** Higher amperage products require a pilot duty thermostat with separate power controller. Please see following pages for available heaters without thermostats.

- Moisture/explosion-resistant enclosure (suitable for use in non-classified areas only)

**RAPID SHIP**

- RS - Next day shipment up to 5 pieces

**Note:** All screw plug bundles are designed to fit the inside diameter of the equivalent mating coupling. They will not fit into the equivalent pipe inside diameter.

- ③ Wired for 3-phase operation only
- ⑤ No third party recognition
- ⑧ Can be wired for 1-phase operation

# Immersion Heaters

## WATROD and FIREBAR Screw Plug Immersion Heaters

### Application: Deionized/ Demineralized Water

- 2 1/2 inch NPT screw plug
- WATROD elements
- With thermostat (DPST)

**Note:** Higher amperage products require a pilot duty thermostat with separate power controller. Please see following pages for available heaters without thermostats.

- General purpose enclosure

### RAPID SHIP

- RS - Next day shipment up to 5 pieces

**Note:** All screw plug bundles are designed to fit the inside diameter of the equivalent mating coupling. They will not fit into the equivalent pipe inside diameter.

- ④ Wired for higher voltage

# Immersion Heaters

## WATROD and FIREBAR Screw Plug Immersion Heaters

### Application: Process Water

- 2 inch NPT screw plug
- WATROD elements
- With thermostat (DPST)

**Note:** Higher amperage products require a pilot duty thermostat with separate power controller. Please see following pages for available heaters without thermostats.

- Moisture/explosion-resistant enclosure (suitable for use in non-classified areas only)

### RAPID SHIP

- RS - Next day shipment up to 5 pieces

**Note:** All screw plug bundles are designed to fit the inside diameter of the equivalent mating coupling. They will not fit into the equivalent pipe inside diameter.

⑤ No third party recognition

⑧ Can be wired for 1-phase operation

# Immersion Heaters

## WATROD and FIREBAR Screw Plug Immersion Heaters

### Application: Process Water

- 2 1/2 inch NPT screw plug
- FIREBAR elements
- Without thermostat
- General purpose or moisture/explosion-resistant enclosure (suitable for use in non-classified areas only)

#### General Purpose

#### Moisture/Explosion-Resistant

### RAPID SHIP

- RS - Next day shipment up to 5 pieces

**Note:** All screw plug bundles are designed to fit the inside diameter of the equivalent mating coupling. They will not fit into the equivalent pipe inside diameter.

⑤ No third party recognition

⑥ Can be rewired wye to produce 1/3 of the original kW and watt density (3-phase only)

# Immersion Heaters

## WATROD and FIREBAR Screw Plug Immersion Heaters

### Application: Lightweight Oils and Heat Transfer Oils

- 1 inch NPT screw plug
- WATROD elements
- With thermostat (SPST)
- General purpose or moisture/explosion-resistant enclosure (suitable for use in non-classified areas only)

#### General Purpose

#### Moisture/Explosion-Resistant

# Immersion Heaters

## WATROD and FIREBAR Screw Plug Immersion Heaters

### Application: Lightweight Oils and Heat Transfer Oils

- 2 inch NPT screw plug
- WATROD elements
- Without thermostat
- General purpose or moisture/explosion-resistant enclosure (suitable for use in non-classified areas only)

### RAPID SHIP

- RS - Next day shipment up to 5 pieces

**Note:** All screw plug bundles are designed to fit the inside diameter of the equivalent mating coupling. They will not fit into the equivalent pipe inside diameter.

- ④ Wired for higher voltage
- ⑤ No third party recognition

# Immersion Heaters

## WATROD and FIREBAR Screw Plug Immersion Heaters

### Application: Lightweight Oils and Heat Transfer Oils

- 2 1/2 inch NPT screw plug
- WATROD elements
- With thermostat (DPST)

**Note:** Higher amperage products require a pilot duty thermostat with separate power controller. Please see following pages for available heaters without thermostats.

- General purpose or moisture/explosion-resistant enclosure (suitable for use in non-classified areas only)

General Purpose

Moisture/Explosion-Resistant

### RAPID SHIP

- RS - Next day shipment up to 5 pieces

**Note:** All screw plug bundles are designed to fit the inside diameter of the equivalent mating coupling. They will not fit into the equivalent pipe inside diameter.

- ③ Wired for 3-phase operation only
- ⑤ No third party recognition
- ⑧ Can be wired for 1-phase operation

# Immersion Heaters

## WATROD and FIREBAR Screw Plug Immersion Heaters

### Application: Medium Weight Oils and Heat Transfer Oils

- 1 1/4 inch NPT screw plug
- FIREBAR elements
- With thermostat (DPST)
- General purpose or moisture/explosion-resistant enclosure (suitable for use in non-classified areas only)

#### General Purpose

#### Moisture/Explosion-Resistant

**RAPID SHIP**

- RS - Next day shipment up to 5 pieces

**Note:** All screw plug bundles are designed to fit the inside diameter of the equivalent mating coupling. They will not fit into the equivalent pipe inside diameter.

③ Wired for 3-phase operation only

⑤ No third party recognition

# Immersion Heaters

## WATROD and FIREBAR Screw Plug Immersion Heaters

### Application: Medium Weight Oils and Heat Transfer Oils

- 2 inch NPT screw plug
- WATROD elements
- Without thermostat
- General purpose or moisture/explosion-resistant enclosure (suitable for use in non-classified areas only)

### RAPID SHIP

- RS - Next day shipment up to 5 pieces

**Note:** All screw plug bundles are designed to fit the inside diameter of the equivalent mating coupling. They will not fit into the equivalent pipe inside diameter.

- ③ Wired for 3-phase operation only
- ⑤ No third party recognition

# Immersion Heaters

## WATROD and FIREBAR Screw Plug Immersion Heaters

### Application: Medium Weight Oils and Heat Transfer Oils

- 2 1/2 inch NPT screw plug
- WATROD elements
- Without thermostat
- General purpose or moisture/explosion-resistant enclosure (suitable for use in non-classified areas only)

General Purpose

Moisture/Explosion-Resistant

# Immersion Heaters

## WATROD and FIREBAR Screw Plug Immersion Heaters

### Application: Medium Weight Oils and Heat Transfer Oils

- 2 1/2 inch NPT screw plug
- FIREBAR elements
- With thermostat (DPST)

**Note:** Higher amperage products require a pilot duty thermostat with separate power controller. Please see following pages for available heaters without thermostats.

- General purpose or moisture/explosion-resistant enclosure (suitable for use in non-classified areas only)

# Immersion Heaters

## WATROD and FIREBAR Screw Plug Immersion Heaters

### Ordering Information

#### Part Number

Stock Screw Plug Part Number	Optional Terminal Enclosures	Optional Process Sensors	Sheath Limit Sensors

#### Stock Screw Plug Part Number

**Note:** Catalog part numbers include standard option enclosures and process sensors. To order optional enclosures or sensors, substitute the appropriate suffix.

#### Optional Terminal Enclosures

S =	General purpose enclosure
W =	Moisture-resistant enclosure
E =	Explosion-resistant enclosure
C =	Moisture/explosion-resistant enclosure

**Note:** Catalog listings include either a general purpose enclosure or moisture/explosion-resistant enclosure. Substitute enclosure options are noted.

#### Optional Process Sensors

2 =	30 to 250°F, (-1 to 121°C) SPST
3 =	175 to 550°F, (79 to 288°C) SPST
4 =	30 to 110°F, (-1 to 43°C) DPST
5A=	60 to 250°F, (16 to 121°C) DPST (FIREBAR)
7A=	100 to 550°F, (38 to 288°C) DPST (FIREBAR)
PJ=	Type J process thermocouple in thermowell
PK=	Type K process thermocouple in thermowell

**Note:** Thermostat part numbers are shown in the *Thermostat Chart* on page 537.

**Example Part Number:** BHC78C6 S 1 HJ

#### Sheath Limit Sensors

HJ=	Type J high-limit thermocouple, horizontal mount
TJ=	Type J high-limit thermocouple, vertical/housing at top
BJ=	Type J high-limit thermocouple, vertical/housing at bottom
HK=	Type K high-limit thermocouple, horizontal mount
TK=	Type K high-limit thermocouple, vertical/housing at top
BK=	Type K high-limit thermocouple, vertical/housing at bottom

**Note:** Heater orientation is critical to accurate sensing of limit conditions. Use the appropriate code to indicate heater mounting orientation.

# Immersion Heaters

## WATROD and FIREBAR Screw Plug Immersion Heaters

### Screw Plug with Control Assembly

Constructed from a WATROD screw plug heater, a moisture resistant terminal enclosure and built-in temperature sensor and power controller, this assembly comes pre-wired and ready for hook-up to any 120VAC control circuit.

Optional sheath materials, NPT screw plug sizes and materials, wattages, voltages and terminal enclosures extend application versatility.

### Performance Capabilities

- Watt densities up to 60 W/in<sup>2</sup> (9.3 W/cm<sup>2</sup>)
- Wattages up to 20 kilowatts
- Voltages up to 600VAC
- Alloy 800/840 sheath temperatures up to 1600°F (870°C)

### Features and Benefits

**Three 0.475 in. (12 mm) diameter WATROD elements brazed to a 2 in. (51 mm) NPT brass screw plug**

- Produces a pressure-tight seal

**WATROD hairpins are repressed (recompacted) after bending**

- Maintains MgO density, dielectric strength, heat transfer and life

**Two built-in thermostats, one on-off with manual reset**

- Helps ensure safe operation by automatically cycling on and off when process or sheath temperatures reach a predetermined set point selectable from 30° to 250°F (0° to 120°C)

**Internal mechanical contactor**

- Works on a 120VAC control circuit to switch higher volts/amps to the heating elements

**Hinged, moisture resistant terminal enclosure has two conduit openings**

- Accommodates 3/4 in. (19 mm) NPT conduit fittings

**Terminal enclosures can be rotated to mate with existing conduits**

- Minimal fastener adjustment required

**Thermowells allow replacing the thermostat sensing element without draining the fluid being heated**

- Labor required to maintain and repair is minimized

### Typical Applications

- Water heating
- Commercial dishwashers and glass washers
- Sterilizing equipment

### Application Hints

Same as *Screw Plug Immersion Heaters*. See page 169 for details.

### Accessories

*Clamping Nut, Gasket and Washers*—for mounting to thin-wall tanks, use optional clamping nut, gasket and washers. To order, specify **NGW**.

# Immersion Heaters

## WATROD and FIREBAR ANSI Flange Immersion Heaters

Watlow flange heaters are easy to install and maintain. Designed for heating liquids and gases in tanks and pressure vessels, flange immersion heaters are ideal for applications requiring higher kilowatts.

Watlow flange heaters are made with WATROD or FIREBAR tubular elements brazed or welded to a flange. Stock flange heaters are equipped with a general purpose terminal enclosure.

Flange heaters, with FIREBAR elements, also answer the need for liquid immersion applications requiring high kilowatts in small tanks. The FIREBAR element's unique flat surface geometry packs more power in a smaller bundle, with lower watt density, making it especially well-suited for petroleum-based liquid heating applications.

### Performance Capabilities

- Watt densities up to 100 W/in<sup>2</sup> (15.5 W/cm<sup>2</sup>)
- Wattages up to three megawatts
- UL® and CSA component recognition up to 600VAC
- Alloy 800/840 sheath temperatures up to 1600°F (870°C)
- Passivated 316 stainless steel sheath temperatures up to 1200°F (650°C)
- 304 stainless steel sheath temperatures up to 1200°F (650°C)
- Steel sheath temperatures up to 750°F (400°C)
- FIREBAR flange heaters deliver more kilowatts in smaller bundles
- A conventional round tubular 10-inch ANSI flange can be replaced by a 6-inch ANSI FIREBAR flange with same immersed length

### Features and Benefits

#### ANSI and ANSI compatible 2, 2 1/2, 3 thru 48 inch flanges

- Provides appropriate heater size-to-application and fit

#### Element sheath and flange materials

- Meets your application needs

#### Integral thermowells

- Provides convenient temperature sensor insertion and replacement without draining the fluid being heated

#### Standard, general purpose terminal enclosure

- Offers easy access to wiring

#### Element support(s)

- Provides proper element spacing to maximize heater performance and life

#### All units are inspected and/or tested

- Ensures element-to-flange pressure seals do not leak

#### Drilled and tapped eyebolt holes or lift lugs for eye bolts on three inch and larger flange heaters

- Facilitates lifting during installation

#### WATROD hairpins are repressed (recompacted)

- Provides improved heater life, insulation resistance and heat transfer

# Immersion Heaters

## WATROD and FIREBAR ANSI Flange Immersion Heaters

### Features and Benefits *(Continued)*

#### **FIREBAR flange heaters pack more kilowatts into a smaller bundle**

- Includes a conventional round tubular 10 in. (254 mm) ANSI flange which can be replaced by a 6 in. (152 mm) ANSI FIREBAR flange with the same immersed length

#### **Branch circuits are designed for 48 amperes per circuit maximum**

- Reduces risk of failure due to excessive temperatures generated by high amperage

#### **UL® and CSA component recognition under file numbers E52951 and 31388 respectively**

- Simplifies obtaining third-party recognition for assembly

### Typical Applications

- Water:
  - Deionized
  - Demineralized
  - Clean
  - Potable
  - Process
- Industrial water rinse tanks
- Vapor degreasers
- Hydraulic oil, crude, asphalt
- Lubricating oils at API specified watt densities
- Air and gas flow
- Caustic solutions
- Chemical baths
- Process air equipment
- Boiler equipment
- Freeze protection of any fluid
- Anti-freeze (glycol) solutions
- Paraffin

### Options

#### Terminal Enclosures

General purpose terminal enclosures, without thermostats, are standard on all flange immersion heaters. Optional terminal enclosures include:

- General purpose with a single or double-pole thermostat
- Moisture resistant—available with or without a single- or double-pole thermostat
- Corrosion resistant—available with or without a single- or double-pole thermostat
- Non-certified, explosion resistant suitable for use in non-classified areas only—available with or without a single- or double-pole thermostat
- Explosion resistant Class 1, Div. 1 and 2, Groups B, C, D, T1 - T6—available with or without a single- or double-pole thermostat
- Non-certified, explosion and moisture resistant combination suitable for use in non-classified areas only—available with or without a single- or double-pole thermostat

Prior to ordering, refer to the terminal enclosure dimensions on page 243. Order by adding the appropriate suffix letter(s) to the base flange heater part number, as shown on the Ordering information chart. Heater part numbers and suffix letters are depicted on the charts, pages 244 to 305. Specify class and group, if applicable.

#### **Caution**

Certified explosion-resistant terminal enclosures are intended to provide explosion containment in the electrical termination/wiring enclosure only. No portion of the assembly outside of this enclosure is covered under this rating. Rating effectiveness may be compromised by abuse or misapplication.

# Immersion Heaters

## WATROD and FIREBAR ANSI Flange Immersion Heaters

*Options (Continued)*

### Stand-off Terminal Enclosures

Stand-off terminal enclosures provide an air-insulating barrier between the flange and terminal enclosure by mounting the terminations and wiring away from the flange. Stand-off terminal enclosures are recommended whenever a process operating temperature exceeds 210°F (100°C). This helps minimize terminal enclosure temperatures.

To order, specify **stand-off terminal enclosure**.

### Certified Enclosures

CSA, ATEX or IECEx certified enclosures protect wiring in hazardous gas environments. These terminal enclosures, covered under CSA file number 61707, ATEX certificate # SIRA 10ATEX1155X or IECEx certificate # IECEx CSA 09.0010X are available on WATROD flange heaters. For additional information, see page 567 and 568 or contact your Watlow representative.

For products that will be installed in hazardous locations, please provide the following information:

- Operating conditions
- Minimum and maximum ambient temperatures for the installation location
- Mounting orientation

Watlow must understand this information so that an appropriate design can be provided.

### ASME Pressure Vessel Code Welding

Flange assemblies can be provided with an ASME Section VIII, Div. I pressure vessel stamp upon request.

### Thermostats

To provide process temperature control, Watlow offers optional single pole, single throw (SPST) and double pole, single throw (DPST) thermostats.

Unless otherwise specified, thermostats are mounted inside the terminal enclosure. For details and ordering information, refer to *Thermostats* on pages 534 to 537. Please verify that the thermostat's sensing bulb O.D. is compatible with the flange heater's thermowell I.D.

### Thermocouples

ASTM Type J or K thermocouples offer more accurate sensing of process and/or sheath temperatures. A thermocouple may be inserted into the thermowell or attached to the heater's sheath.

Thermocouples are supplied with 120 in. (3050 mm) leads (longer lead lengths available). Unless otherwise specified, thermocouples are supplied with temperature ranges detailed on the *Thermocouple Types* chart.

Using a thermocouple requires an appropriate temperature and power controller. These must be purchased separately. Watlow offers a wide variety of temperature and power controllers to meet virtually all applications. Temperature controllers can be configured to accept process variable inputs, too. Contact your Watlow representative for details.

To order, specify **Type J** or **K** thermocouple and lead length. Indicate if the thermocouple is for **process temperature sensing** or heater sheath **high-limit protection**. Please specify if the flange heater will be mounted **vertical** or **horizontal** in the tank. **If vertical, specify if the housing is on top or bottom.**

If the flange heater is part of an in-line circulation heating application, indicate flow direction relative to the heater's enclosure.

### Thermocouple Types

ASTM Type	Conductor Characteristics		Recommended <sup>①</sup> Temperature Range	
	Positive	Negative	°F	(°C)
J	Iron (Magnetic)	Constantan (Non-magnetic)	0 to 1000	(-20 to 540)
K	Chromel® (Non-magnetic)	Alumel® (Magnetic)	0 to 2000	(-20 to 1100)

① Type J and Type K thermocouples are rated 32 to 1382°F and 32 to 2282°F (0-750°C and 0-1250°C), respectively. Watlow does not recommend exceeding temperature ranges shown on this chart for the tubular product line.

# Immersion Heaters

## WATROD and FIREBAR ANSI Flange Immersion Heaters

*Options (Continued)*

### Wattages and Voltages

Watlow routinely supplies flange immersion heaters with 240 to 480VAC as well as wattages from 150 watts to one megawatt.

### Sheath Materials

The following sheath materials are available on WATROD and FIREBAR flange heaters:

#### Standard Sheath Materials

WATROD	Alloy 800, 840 316 SS Steel
FIREBAR	Alloy 800

#### Exotic Sheath Materials

Contact your Watlow representative for details and availability.

### External Finishing

#### Passivation

During the manufacturing process, particles of iron or tool steel may become embedded in the stainless steel or alloy sheath. If not removed, these particles may corrode, produce rust spots and/or contaminate the process. For critical sheath applications, passivation will remove free iron from the sheath. To order, specify **passivation**.

#### Other Finishes

Bright annealing available to meet cosmetic demands.

### Flanges

#### Flange Sizes and Styles

**Standard:** 2<sup>①</sup>, 2<sup>1/2</sup><sup>①</sup>, 3 to 48 inch ANSI raised face/blind flanges.

**Made-to-Order:** 16, 18, 20 and 24 inch in any recognized configuration, as well as customer specified. Over 48 inch ANSI flange, contact your Watlow representative.

#### Flange Materials

Standard	Carbon steel 316 SS 304 SS
----------	----------------------------------

#### Pressure Classes

Standard	150 lb 300 lb 600 lb
----------	----------------------------

① ANSI bolt pattern only

### Gaskets

Rubber, asbestos-free and spiral wound gaskets are available for all flange sizes. Order by specifying gasket type, flange size/rating, process operating temperature and pressure.

To make the correct selection, see the *Gasket Selection* chart. It provides a recommended gasket type and effective temperature rating.

To use this chart, multiply operating temperature by the operating pressure to arrive at "Maximum PSIG x °F." This is listed in the chart's first column.

#### Gasket Selection

Maximum PSIG x °F	Gasket Temperature °F	Gasket Type
Up to 15,000	300	Rubber
Over 250,000	700	Asbestos-Free
Over 250,000	③	Spiral Wound

③ Depends on metal gasket material.

# Immersion Heaters

## WATROD and FIREBAR ANSI Flange Immersion Heaters

*Options (Continued)*

### Baffles

For forced circulation applications, 316 stainless steel baffles can be arranged on the heating element bundle to enhance and/or modify fluid or gas flow for better heat transfer.

For open tank or convection heating applications, standard element supports will be supplied.

To order, specify **baffles**.

### ANSI Raised Face Blind Flange, 150# Class Dimensions

Pipe Size	Outside Diameter	Flange Thickness	Diameter of Bolt Circle	Diameter of Bolt Holes	Number of Bolt Holes

20	27.50	1.69	25.00	1.25	20
24	32.00	1.88	29.50	1.38	20

### Application Hints

- Select the recommended heating element sheath material and watt density for the substance being heated. Use the *Supplemental Applications Chart* on pages 555 to 560. If unable to determine the correct heating element sheath material and type, contact your Watlow representative.
- Extend the element no-heat section completely into the fluid being heated to help prevent premature heater failure. See accompanying illustration for proper no-heat section placement.
- Locate flange heater low in the tank, but above the sludge level.
- Choose a FIREBAR element when your application requires a smaller system package or lower watt density.
- Ensure wiring integrity by keeping terminal enclosure temperature below 400°F (205°C).
- Size power feeder wires in accordance with National Electrical Code guidelines and other applicable codes.
- Keep electrical connections clean, dry and tight.
- Minimize problems associated with low liquid level conditions by using low liquid level sensor or sheath temperature high-limit control.

- Periodically remove the flange assembly to inspect and clean the heating element(s). This preventive maintenance will reduce premature failure and optimize heater performance.
- Refer to the *Installation and Maintenance Instructions* for correct orientation of FIREBAR elements. This is important in air applications with customer-supplied circulation tanks. Correct element orientation to flow minimizes pressure drop and increases buoyancy force and heater performance.

## Extended Capabilities For WATROD and FIREBAR ANSI Flange Immersion Heaters

### Options

#### Enclosure Enhancements

- Enclosure heater to solve condensation and freeze problems.
- Power distribution blocks to facilitate power feed line wiring.

#### RTDs

If the process requires greater temperature sensing accuracy than is possible with thermocouples, Watlow can also supply RTDs in DIN or JIS calibrations. Contact your Watlow representative for details.

#### Wattages and Voltages

If required, Watlow will make heaters with voltage up to 600VAC and wattage beyond one megawatt. For more information on special voltage and wattage configurations, contact your Watlow representative.

#### Sheath Materials

The following sheath materials are available on WATROD and FIREBAR flange heaters:

##### Extended Sheath Materials

<b>WATROD</b>	Titanium 304 and 321 SS Hastelloy C276 Alloy 400 and 600
<b>FIREBAR</b>	304 SS

### RAPID SHIP

- **RS** - Next day shipment up to 5 pieces
- **M** - Manufacturing lead times

- Notes:**
- All flange bundles are designed to fit the inside diameter of the equivalent standard schedule pipe
  - For ANSI flange dimensions, reference chart on page 241

# Immersion Heaters

## WATROD and FIREBAR ANSI Flange Immersion Heaters

### Application: Clean Water

- 5 inch - 150 lb ANSI flange
- WATROD element
- Without thermostat
- General purpose or moisture-resistant enclosures

General Purpose and Moisture Resistant

① The number and size of the conduit opening will comply with the National Electrical Code® standards.

### RAPID SHIP

- RS - Next day shipment up to 2 pieces
- M - Manufacturing lead times

- Notes:**
- All flange bundles are designed to fit the inside diameter of the equivalent standard schedule pipe
  - For ANSI flange dimensions, reference chart on page 241
  - Truck Shipment only

# Immersion Heaters

## WATROD and FIREBAR ANSI Flange Immersion Heaters

### Application: Deionized or Demineralized Water

- 6 inch - 150 lb ANSI flange
- WATROD element
- Without thermostat
- General purpose or moisture-resistant enclosures

① The number and size of the conduit opening will comply with the National Electrical Code® standards.

### RAPID SHIP

- RS - Next day shipment up to 5 pieces

- Notes:**
- All flange bundles are designed to fit the inside diameter of the equivalent standard schedule pipe
  - For ANSI flange dimensions, reference chart on page 241

# Immersion Heaters

## WATROD and FIREBAR ANSI Flange Immersion Heaters

### Application: Process Water

- 6 inch - 150 lb ANSI flange
- WATROD elements
- Without thermostat
- General purpose or moisture-resistant enclosures

# Immersion Heaters

## WATROD and FIREBAR ANSI Flange Immersion Heaters

### Application: Process Water

- 10 inch - 150 lb ANSI flange
- WATROD elements
- Without thermostat
- General purpose or moisture-resistant enclosures

① The number and size of the conduit opening will comply with the National Electrical Code standards.

Description	Volts	kW	Ph	# Circ.	"B" Dim. in. (mm)	Ship Wt. lbs (kg)	Part Number	Del.	Part Number	Del.

**RAPID SHIP**  
 • RS - Next day shipment up to 5 pieces  
 • M - Manufacturing lead times

**Notes:** • All flange bundles are designed to fit the inside diameter of the equivalent standard schedule pipe  
 • For ANSI flange dimensions, reference chart on page 241

⑥ Can be rewired wye to produce 1/3 of the original kW and watt density (3-phase only)

■ Truck Shipment only

# Immersion Heaters

## WATROD and FIREBAR ANSI Flange Immersion Heaters

### Application: Forced Air and Caustic Solutions

- 6 inch - 150 lb ANSI flange
- WATROD elements
- Without thermostat
- General purpose or moisture-resistant enclosures

### General Purpose and Moisture Resistant

① The number and size of the conduit opening will comply with the National Electrical Code® standards.

#### Moisture Resistant

① The number and size of the conduit opening will comply with the National Electrical Code® standards.

Description	Volts	kW	Ph	# Circ.	"B" Dim. in. (mm)	Ship Wt. lbs (kg)	Part Number	Del.	Part Number	Del.
23 W/in <sup>2</sup> Steel Flange 45-Alloy 800 Elements (3.6 W/cm <sup>2</sup> )	480	75.0	3	3	33 (838)	225 (102)	FWNA33A5S	M	FWNA33A5W	M
	480	100.0	3	3	43 1/2 (1105)	255 (116)	FWNA43J5S	M	FWNA43J5W	M
	480	125.0	3	5	51 1/2 (1308)	300 (136)	FWNA51J5S	M	FWNA51J5W	M

- M - Manufacturing lead times

- Notes:**
- All flange bundles are designed to fit the inside diameter of the equivalent standard schedule pipe
  - For ANSI flange dimensions, reference chart on page 241
- Truck Shipment only

# Immersion Heaters

## WATROD and FIREBAR ANSI Flange Immersion Heaters

### Application: Lightweight Oils and Heat Transfer Oils

- 3 inch - 150 lb ANSI flange
- WATROD elements
- Without thermostat
- General purpose or moisture-resistant enclosures
- Single circuit

#### General Purpose

#### Moisture Resistant

### RAPID SHIP

- **RS** - Next day shipment up to 5 pieces
- **M** - Manufacturing lead times

- Notes:**
- All flange bundles are designed to fit the inside diameter of the equivalent standard schedule pipe
  - For ANSI flange dimensions, reference chart on page 241
- Truck Shipment only

# Immersion Heaters

## WATROD and FIREBAR ANSI Flange Immersion Heaters

### Application: Lightweight Oils and Heat Transfer Oils

- 6 inch - 150 lb ANSI flange
- WATROD elements
- Without thermostat
- General purpose or moisture-resistant enclosures

### General Purpose and Moisture Resistant

① The number and size of the conduit opening will comply with the National Electrical Code® standards.

# Immersion Heaters

## WATROD and FIREBAR ANSI Flange Immersion Heaters

### Application: Light Weight Oils and Heat Transfer Oils

- 10 inch - 150 lb ANSI flange
- WATROD elements
- Without thermostat
- General purpose or moisture-resistant enclosures

#### General Purpose

#### Moisture Resistant

① The number and size of the conduit opening will comply with the National Electrical Code® standards.

# Immersion Heaters

## WATROD and FIREBAR ANSI Flange Immersion Heaters

### Application: Medium Weight Oils and Heat Transfer Oils

- 6 inch - 150 lb ANSI flange
- WATROD elements
- Without thermostat
- General purpose or moisture-resistant enclosures

### General Purpose and Moisture Resistant

① The number and size of the conduit opening will comply with the National Electrical Code® standards.

**RAPID SHIP**

- RS - Next day shipment up to 5 pieces

**Notes:** • All flange bundles are designed to fit the inside diameter of the equivalent standard schedule pipe  
• For ANSI flange dimensions, reference chart on page 241

③ Wired for 3-phase operation only

# Immersion Heaters

## WATROD and FIREBAR ANSI Flange Immersion Heaters

### Application: Bunker C, Asphalt and #6 Fuel Oil

- 4 inch - 150 lb ANSI flange
- WATROD elements
- Without thermostat
- General purpose or moisture-resistant enclosures

General Purpose and Moisture Resistant

① The number and size of the conduit opening will comply with the National Electrical Code® standards.

# Immersion Heaters

## WATROD and FIREBAR ANSI Flange Immersion Heaters

### Ordering Information

#### Part Number

Stock ANSI Flange Part Number	Optional Terminal Enclosures	Optional Process Sensors	Sheath Limit Sensors

#### Stock ANSI Flange Part Number

**Note:** Catalog part numbers include optional enclosures and process sensors. To order optional enclosures or sensors, substitute the appropriate suffix.

#### Optional Terminal Enclosures

S =	General purpose enclosure
W =	Moisture-resistant enclosure
E =	Explosion-resistant enclosure
C =	Moisture/explosion-resistant enclosure

**Note:** Catalog listings include either a general purpose enclosure or moisture/explosion-resistant enclosure. Substitute enclosure options are noted.

#### Optional Process Sensors

2 =	30 to 250°F, (-1 to 121°C) SPST
3 =	175 to 550°F, (79 to 288°C) SPST
4 =	30 to 110°F, (-1 to 43°C) DPST
5A =	60 to 250°F, (16 to 121°C) DPST (FIREBAR)
7A =	100 to 550°F, (38 to 288°C) DPST (FIREBAR)
PJ =	Type J process thermocouple in thermowell
PK =	Type K process thermocouple in thermowell

**Note:** Thermostat part numbers are shown in the *Thermostat Chart* on page 537.

**Example Part Number:** FPS732R12 S 2 HJ

#### Sheath Limit Sensors

HJ =	Type J high-limit thermocouple, horizontal mount
TJ =	Type J high-limit thermocouple, vertical/housing at top
BJ =	Type J high-limit thermocouple, vertical/housing at bottom
HK =	Type K high-limit thermocouple, horizontal mount
TK =	Type K high-limit thermocouple, vertical/housing at top
BK =	Type K high-limit thermocouple, vertical/housing at bottom

**Note:** Heater orientation is critical to accurate sensing of limit conditions. Use the appropriate code to indicate heater mounting orientation.

# Immersion Heaters

## WATROD and FIREBAR Flange Immersion Heaters

### *Plate Flange Immersion Heaters*

Watlow plate flange heaters are easy to install and maintain. These products are designed for heating heat transfer fluids, medium and lightweight oils and water in tanks and pressure vessels. Plate flange heaters are ideal for applications requiring low to medium wattage requirements.

Watlow plate flange heaters are made with WATROD tubular elements that are brazed or welded to the flange. Stock plate flange heaters are supplied with general purpose or moisture-resistant terminal enclosures.

### **Performance Capabilities**

- Watt densities up to 100 W/in<sup>2</sup> (15.5 W/cm<sup>2</sup>)
- Wattages up to 18 kilowatts
- Alloy 800/840 sheath temperatures up to 1600°F (870°C)
- 304 stainless steel sheath temperatures up to 1200°F (650°C)
- Steel sheath temperatures up to 750°F (400°C)

### **Features and Benefits**

#### **Rapid ship program**

- Minimizes downtime

#### **Direct replacement for many OEM mold temperature control units**

- Provides a single source supplier for many OEM applications

#### **ANSI compatible 2 and 2½ inch flanges**

- Provides appropriate heater size-to-application fit

#### **Standard general purpose or moisture resistant terminal enclosures**

- Offers easy access to wiring
- Limits accidental contact with termination
- Denies access to wiring connection in local environment

# Immersion Heaters

## WATROD and FIREBAR Flange Immersion Heaters

### Square Flange Immersion Heaters

Designed for use in boilers and industrial storage tanks, the square flange immersion heater from Watlow offers an energy efficient solution to heating water, oils and degreasing solutions.

Consisting of WATROD or FIREBAR elements brazed, staked or welded to a four- or six-bolt flange, these heaters mount directly to a mating flange that is welded to a tank wall or nozzle.

Installation and maintenance is easy. Heater change-out is also simple-unbolt the flange and replace it with another-without extensive equipment downtime.

### Performance Capabilities

- Watt densities up to 100 W/in<sup>2</sup> (15.5 W/cm<sup>2</sup>)
- Wattages up to 24 kilowatts
- Voltages up to 480VAC
- Alloy 800/840 sheath temperatures up to 1600°F (870°C)

### Features and Benefits

#### 2<sup>1</sup>/<sub>2</sub>, 3<sup>1</sup>/<sub>8</sub> and 4<sup>1</sup>/<sub>2</sub> inch square flanges

- Adapts easily to application needs

#### Asbestos-free gaskets

- Come wire-tied to each flange. Spare gaskets also available

#### Epoxy or silicone resin seals rated to 250°F (120°C) or 390°F (200°C)

- Protects elements against moisture and other contaminants

#### WATROD hairpins are repressed (recompacted)

- Helps maintain MgO density, dielectric strength, heat transfer and life

#### UL® and CSA component recognition under file numbers E52951 and 31388

- Meets industry safety standards

### Typical Applications

- Water
- Boiler equipment
- Vapor degreasers
- Fuel oils
- Heat transfer fluids
- Caustic solutions

### Flange Materials

WATROD	Steel 304 SS
FIREBAR	Steel Brass

### Available on Request

- **Sheath materials** in steel, 304 and 316 stainless steel and titanium
- **Flange materials** in titanium and 316 stainless steel
- **Flange sizes** to meet specific application needs
- **External finishes** such as passivation, belt polishing and glass beading
- **Other voltage and wattage ratings**  
Contact your Watlow representative for details

# Immersion Heaters

## WATROD and FIREBAR Flange Immersion Heaters

### Square Flange Immersion Heaters

#### Application Hints

- Determine recommended sheath materials and watt densities by using the *Element and Assembly Selection Guide* on pages 554 to 555. If wattage is not known, contact your Watlow representative.
- Extend the element's no-heat section completely in the fluid at all times to prevent premature heater failure. See the accompanying illustration for proper placement of the no-heat section.

- Mount WATROD and FIREBAR square flange heaters horizontally and low in the tank, but above sludge level.
- Periodically remove heaters to inspect and clean the elements.
- Keep terminations clean, dry and tight.
- Minimize problems associated with low liquid level conditions by using a low liquid level sensor.

# Immersion Heaters

**EXTENDED  
CAPABILITY**

## WATROD and FIREBAR Flange Immersion Heaters

### *Extended Capabilities For Bayonet/Pipe Insert Immersion Heaters*

Bayonet/Pipe insert immersion heaters permit removing and servicing the heater bundle without draining the liquid being heated.

Heating is accomplished by mounting a flange or screw plug immersion heater inside a pressure-tight bayonet pipe vessel then mates to a flange connection on a storage tank's side. Heat transfer between element(s) and tank contents is accomplished by heating the air or heat transfer fluid inside the bayonet pipe for conduction to the tank's contents.

### Performance Capabilities

- Wattages up to 100 kilowatts
- Voltages up to 600VAC
- Ratings up to 600 lb pressure class
- Alloy 800 sheath temperatures up to 1400°F (760°C)
- Stainless steel sheath temperatures up to 1200°F (650°C)
- Steel sheath temperatures up to 750°F (400°C)

### Features and Benefits

#### Low watt density screw plug or flange heaters mounted in the bayonet vessel

- Provides long life

#### Carbon steel, 304 and 316 stainless steel bayonet vessels

- Offers compatibility with a wide range of liquids

#### Welded flange on pipe vessel

- Ensures pressure seal

#### Heating elements support(s)

- Ensures proper element spacing and maximum heater performance

### Typical Applications

- Indirect heating of viscous fluids:
  - Asphalt
  - Tar
  - Molasses
  - Syrup
  - Glue
- Corrosive liquids
- Degreasing fluids

## WATROD and FIREBAR Flange Immersion Heaters

### *Extended Capabilities For Bayonet/Pipe Insert Immersion Heaters*

#### Options

Pipe insert heaters can be supplied with a variety of options, including:

- Appropriate gasket materials
- Passivation cleaning on pipe insert
- European screw plug to flange adapters
- CSA certified terminal enclosures
- Stand-off terminal enclosures
- Thermocouple temperature sensors
- Thermostats
- Customer specified materials, sizes and pressure class ratings

For descriptions and ordering information about these options, please refer to *Flange Immersion Heaters*, pages 237 to 306, or *Screw Plug Immersion Heaters*, pages 165 to 234.

#### Flanges

Flanges to 24 in. (610 mm) nominal pipe size are available in materials compatible with specific application needs. For information on flange materials and ratings, consult your Watlow representative.

#### Bayonet Vessels

Bayonet vessels are available up to 14 in. (356 mm) nominal pipe size and 20 feet long. Vessel size is dependent upon the kilowatt requirement and element watt density. For more information, contact your Watlow representative.

#### Application Hints

- Mount pipe insert heater horizontally
- Locate pipe insert heaters low in the tank, but above the sludge level
- Consider a low liquid level sensor to protect against low liquid level conditions
- Select a watt density that is compatible with the heat transfer media being used
- Insulate the pipe insert heater's exterior to minimize heat loss

#### **Caution:**

Do not insulate the terminal enclosure.

# Immersion Heaters

## Over-the-Side Heaters

### L and O Shaped Immersion Heaters

Over-the-side heaters are ideal for heating water, oils, solvents, salts and acids. Application versatility is enhanced with optional sheath materials, kilowatt ratings, terminal enclosures and mounting methods.

The L and O shaped “installed-from-the-top” heaters slide easily into tanks, with the heated portion immersed along the side or at the bottom. The drum immersion heaters are designed for direct immersion in a standard 55 gallon steel drum. Watlow vertical loop immersion heaters are well-suited for open tank applications.

### L and O Shaped Performance Capabilities

- Alloy 800 sheath element watt densities up to 60 W/in<sup>2</sup> (9.3 W/cm<sup>2</sup>)
- Wattages up to 50 kilowatts
- Voltages up to 600VAC

### Features and Benefits

#### Rugged, light-weight construction

- Resists damage during installation or removal

#### 0.475 in. (12 mm) diameter WATROD heating elements

- Offers one- or three-phase operation

#### WATROD hairpins are repressed (recompacted)

- Maintains MgO density, dielectric strength, heat transfer and heater life

#### Four inch (100 mm) sludge legs

- Keeps heating elements off the tank’s bottom to help avoid being covered with sediment

#### RTV riser seal

- Prevents moisture from infiltrating electrical areas

#### Standardized size 1 in. (25 mm) conduit openings

- Facilitates wiring

#### SRG insulated flexible lead wires, rated to 390°F (200°C)

- Allows factory or field wiring for three- or one-phase operation

#### Riser materials are compatible with element sheath materials such as stainless steel with alloy 800 sheath and steel with steel sheath

- Meets varying application needs
- Ensures ease of use

#### Integral thermowells

- Provides convenient temperature sensor insertion and replacement without draining the fluid being heated

#### Moisture resistant

- Standardizes enclosures

#### UL® and CSA component recognition

- 480 and 600VAC maximum under file numbers E52951 and 31388 respectively

#### Typical Applications

- Water heating
- Solvents
- Freeze protection
- Salts
- Viscous oils
- Caustic solutions
- Storage tanks
- Paraffin
- Degreasing tanks

# Immersion Heaters

## Over-the-Side Heaters

### L and O Shaped Immersion Heaters

#### Options

#### Terminal Enclosures

Moisture resistant terminal enclosures, without thermostats, are standard on all Watlow L and O shaped over-the-side heaters. Optional terminal enclosures meet application requirements with:

- Corrosion resistant, available with or without a single- or double-pole thermostat.
- Explosion/moisture resistant Class 1, Div. I and II, Groups B, C and D. Available with or without a single- or double- pole thermostat.

#### Thermostats

Optional single- and double-pole thermostats are also available separately.

For details on thermostats, see *Thermostats*, pages 534 to 537.

#### Wattages and Voltages

Watlow routinely supplies over-the-side heaters with 240 to 480VAC as well as wattages from 3 to 18 kilowatts.

#### Multiple Elements

Over-the-side immersion heaters are configured with three WATROD heating elements.

To achieve a specific kilowatt rating, Watlow can configure units with up to six heating elements.

To order, specify **multiple elements**, the **number of elements**, **volts**, **watts**, **phase** and **maximum bundle height** and **width**.

#### Riser

A stainless steel or steel riser is supplied to keep terminal enclosures out of the heated solution. Stock heights are 39<sup>5</sup>/<sub>16</sub> or 51<sup>5</sup>/<sub>16</sub> in. (1000 or 1320 mm). Upon request, riser height up to 60 ft (18.3 m) can be provided.

To order, specify **riser material** and **height**.

#### Right Angle Riser

Riser may be right angle formed to move the terminal enclosure away from over the tank.

To order, specify **right angle riser** and **dimensions**.

#### Sludge Legs

Four inch (100 mm) sludge legs are supplied on all stock units to keep elements above sediments. Shorter or longer sludge legs are available upon request.

To order, specify **sludge legs** and **height**.

#### Sheath Material

Stock O and L shaped over-the-side heaters come with alloy 800 or steel sheaths.

To order, specify the **sheath material**.

#### Caution

Explosion-resistant terminal enclosures are intended to provide explosion containment in the electrical termination/wiring enclosure only. No portion of the assembly outside of this enclosure is covered under this rating. Rating effectiveness may be compromised by abuse or misapplication.

#### Thermocouples

ASTM Type J or K thermocouples offer more accurate sensing of process and/or sheath temperatures. A thermocouple may be inserted into the thermowell or attached to the heater's sheath.

Thermocouples are supplied with 120 in. (3050 mm) leads (longer lead lengths available). Unless otherwise specified, thermocouples are supplied with temperature ranges detailed on the *Thermocouple Types* chart.

Thermocouples require an appropriate temperature and power controller. These must be purchased separately. Watlow offers a wide variety of temperature and power controllers to meet virtually all applications. Temperature controllers can be configured to accept process variable inputs, too. Contact your Watlow representative for details.

To order, specify **Type J** or **K** thermocouple, **lead length**, and indicate if it is for measuring **process** temperature or as a **high-limit** sensing device.

#### Thermocouple Types

ASTM Type	Conductor Characteristics		Recommended Temperature Range	
	Positive	Negative	°F	(°C) ①
J	Iron (Magnetic)	Constantan (Non-magnetic)	0 to 1000	(-20 to 540)
K	Chromel® (Non-magnetic)	Alumel® (Magnetic)	0 to 2000	(-20 to 1100)

① Type J and Type K thermocouples are rated 32 to 1382°F and 32 to 2282°F (0-750°C and 0-1250°C), respectively. Watlow does not recommend exceeding temperature ranges shown on this chart for the tubular product line.

## Over-the-Side Heaters

### *Extended Capabilities For L and O Shaped Immersion Heaters*

#### Options

##### Wattages and Voltages

Watlow routinely supplies over-the-side heaters with 240 to 480VAC as well as wattages from 3 to 18 kilowatts. If required, Watlow can configure heaters with voltages and wattages outside these parameters.

For more information about this option, contact your Watlow representative.

---

##### Sheath Material

Stock O and L shaped over-the-side heaters come with alloy 800 sheaths. 304 or 316 stainless steel and titanium sheaths are available upon request.

For more information about this option, contact your Watlow representative.

---

##### Multiple Elements

Over-the-side immersion heaters are configured with three WATROD heating elements.

To achieve a specific kilowatt rating, Watlow can configure units with up to 36 heating elements.

To order, specify **multiple elements**, the **number of elements**, **volts**, **watts**, **phase** and **maximum bundle height** and **width**.

##### Passivation

During the manufacturing process, particles of iron or tool steel may become embedded in the stainless steel or alloy sheath. If not removed, these particles may corrode, produce rust spots and/or contaminate the process.

For critical applications, passivation will remove free iron from the sheath and other wetted surfaces.

To order, specify **passivation**.

---

##### Man Hole Cover

A man hole cover seals the tank and provides heater mounting. Man hole covers are pre-assembled to the riser. Standard man hole covers are made from steel with other materials available upon request.

To order, specify **man hole construction**, **diameter** and **material**.

Stock Over-the-Side Part Number	Optional Terminal Enclosures	Optional Process Sensors	Sheath Limit Sensors

##### Stock Over-the-Side Part Number

**Note:** Catalog part numbers include optional enclosures and process sensors. To order optional enclosures or sensors, substitute the appropriate suffix.

##### Optional Terminal Enclosures

W=	Moisture-resistant enclosure
C=	Moisture/explosion-resistant enclosure

**Note:** Catalog listings include moisture resistant enclosure. Substitute enclosure options are noted.

##### Optional Process Sensors

2A=	30 to 250°F, (-1 to 121°C) SPST
3A=	175 to 550°F, (79 to 288°C) SPST
5A=	60 to 250°F, (16 to 121°C) DPST
7A=	100 to 550°F, (38 to 288°C) DPST
PJ=	Type J process thermocouple in thermowell
PK=	Type K process thermocouple in thermowell

**Note:** Thermostat part numbers are shown in the *Thermostat Chart* on page 537.

##### Sheath Limit Sensors

TJ=	Type J high-limit thermocouple, vertical/housing at top
TK=	Type K high-limit thermocouple, vertical/housing at top

**Note:** Heater orientation is critical to accurate sensing of limit conditions. Use the appropriate code to indicate heater mounting orientation.

**Example Part Number:** OLN714L3 W 2A TK

# Immersion Heaters

## FIREROD® Immersion Heaters

FIREROD® immersion heaters are ideal to replace large screw-plug immersion heaters. Packaging up to 300 W/in<sup>2</sup> (46.5 W/cm<sup>2</sup>) in a compact unit, these heaters are versatile when designed into a heating system.

FIREROD immersion heaters are complete with a stainless steel 3/4 inch National Pipe Thread Taper (NPT) double-threaded fitting which allows conduit boxes to be added. They are also sealed at the lead end with a silicone rubber seal.

Solid copper leads with silicone rubber sleeves are provided for unrestricted wiring. These heaters are recommended for immersion in water of 90+ percent water soluble solutions.

### Performance Capabilities

- Maximum operating temperature in water up to 212°F (100°C) at atmospheric pressure
- Maximum watt density up to 300 W/in<sup>2</sup> (46.5 W/cm<sup>2</sup>)
- Maximum voltage up to 480VAC

### Features and Benefits

#### Nickel-chromium resistance wire precisely centered in the unit

- Ensures even, efficient distribution of heat to the sheath

#### Magnesium oxide (MgO) insulation compacted to the proper density

- Results in high dielectric strength and contributes to faster heat-up

#### Alloy 800 sheath

- Resists water corrosion

#### Metallurgically-bonded conductor pins

- Overlap the resistance wire inside of the core to ensure trouble-free electrical continuity

#### Lead end with silicone rubber seal

- Protects the heater against moisture contamination

#### Stainless steel fittings

- Offer availability for use in corrosive applications

#### Horizontal through the wall tank mounting

- Provides faster set-up

#### 240 and 480VAC voltage

- Allows wiring flexibility for heater use in particular applications

### Typical Applications

- Plastic reclamation
- Food preparation
- Lab equipment

# Immersion Heaters

## FIREROD Immersion Heaters

### Applications and Technical Data

The small size and large capacity of FIREROD immersion heaters are ideal for use in cramped quarters. When heating liquids of low viscosity, FIREROD heaters have high watt density to pack more heat into tight spots. For water heating applications, a rating of 150 to 300 W/in<sup>2</sup> is recommended. Laboratory tests show that under certain conditions, ratings as high as 700 W/in<sup>2</sup> are safe. For longer life at high watt densities, the FIREROD heater:

- Should not be contained in the main body of the liquid or in a restricted space
- Should be covered with liquid at all times
- Should not be allowed to cycle on and off too frequently
- Should not form scale build up

When heating viscous liquids, such as oils, watt densities must be kept low to prevent carbonization at the heater sheath. FIREROD cartridges offer advantages for heating viscous materials where long life and high quality outweigh usual economic considerations.

As in all immersion applications, scale build-up on the sheath and sludge on the bottom of the tank must be carefully controlled to ensure long heater life.

Equipped with smaller threaded fittings than conventional immersion heaters, FIREROD heaters leave space for more units in the same location. Replacement of single FIREROD units in multiheater assemblies is fast and easy to avoid discarding the complete assembly.

Moisture resistant seals are available for protection against damp atmospheres.

Threaded fittings are furnished in either stainless steel or available in brass as an extended offering. FIREROD heaters are designed with alloy 800 sheaths, however, other sheath materials can be provided on made-to-order FIREROD units.

Fittings and sheath material should be appropriate for the specific liquid material being heated.

# Circulation Heaters

## STARFLOW™ Heaters

The STARFLOW™ circulation heater is engineered to heat a flowing gas stream to 1000°F (537°C). The 316L stainless steel chamber houses a small diameter sheathed element, which allows for quick response to both heat-up and cool down cycles.

Watlow's starwound, coiled cable heater provides extremely efficient and reliable heating by maximizing the contact area of the gas or fluid with the element. Because the element is sheathed, the unit can operate in gas streams requiring a clean environment as well as atmospheres containing contaminants and moisture. This provides superior performance compared to units with internally exposed or open element wires.

### Performance Capabilities

- Temperatures up to 1000°F (537°C), 316L stainless steel sheath
- Maximum watt densities up to 30 W/in<sup>2</sup> (4.7 W/cm<sup>2</sup>)
- Maximum voltage up to 240V

### Features and Benefits

#### Small diameter heater

- Allows for quick response time

#### Internal starwound element

- Provides fast, efficient heating

#### Sheathed element

- Provides the ability to heat in clean or impure streams

#### Flexibility in configurations

- Allows for adaptability to any process

#### 316L stainless steel

- Provides a rugged and corrosion resistant construction

#### Electropolishing available on all wetted surface

- Reduces particulate contamination

**Note:** Contact your Watlow representative for ultra-high purity applications

#### Low pressure loss

- Minimizes flow restriction

**Note:** Not suitable for use as a pressure vessel

#### Type J or K thermocouples

- Provide precise control and high-limit safety

#### Replaceable heater and thermocouple

- Reduces replacement cost

#### Shipment from stock

- Reduces downtime

### Typical Applications

- Semiconductor processing
- Curing and drying
- Electronics
- Heat shrinking
- Thermoforming/sealing

# Circulation Heaters

## WATROD™ and FIREBAR® Circulation Heaters

Circulation heaters provide a ready-made means to install electric heating with a minimal amount of time and labor. This is accomplished by combining heating elements, vessel, insulation, terminal enclosure, mounting brackets and inlet and outlet connections into a complete assembly.

Made from NPT screw plug or ANSI flange heater assemblies mated with a pressure vessel (tank), circulation heaters are designed to heat forced-circulation air, gases or liquids. Ideal for either in-line or side-arm operations, these assemblies direct fluids past FIREBAR® or WATROD™ heating elements, to deliver fast response and even heat distribution.

Watlow® meets virtually all your circulation heater assembly needs with made-to-order units. These units can be made from a wide range of heating element sheath materials, wattages, vessel sizes and materials, pressure ratings, terminal enclosures and controls.

### Performance Capabilities

- Watt densities up to 120 W/in<sup>2</sup> (18.6 W/cm<sup>2</sup>)
- Wattages up to three megawatts
- UL® and CSA component recognition up to 690VAC
- Ratings up to ANSI Class 600 pressure class
- Alloy 800/840 sheath temperatures up to 1600°F (870°C)
- Passivated 316 stainless steel sheath temperatures up to 1200°F (650°C)
- Steel sheath temperatures up to 750°F (400°C)

### Features and Benefits

#### Catalog screw plug and flange part numbers

- Provides a wide selection of WATROD and FIREBAR elements to meet specific application requirements

Type	Sizes (in.)
NPT Screw Plugs	1 <sup>1</sup> / <sub>4</sub> , 2 <sup>1</sup> / <sub>2</sub>
ANSI flanges	3, 4, 5, 6, 8, 10, 12, 14

#### ANSI B16.5 Class 150 on 4 or 6 inch FIREBAR element flanges and 3 to 14 inch WATROD element flanges

- Meets recognized agency standards

#### FIREBAR assemblies pack more wattage in a smaller heater bundle

- Replaces larger flanges with round tubular elements, with a smaller package

#### Compacted MgO insulation filled elements

- Maximizes dielectric strength, heat transfer and life

#### 1 inch (25 mm) thermal insulation rated to 750°F (400°C)

- Reduces heat loss from the vessel

#### Heavy-gauge steel jacket (shroud)

- Protects thermal insulation and heating vessel and comes with protective primer coating

# Circulation Heaters

## WATROD and FIREBAR Circulation Heaters

### Features and Benefits *(Continued)*

#### All catalog units rated to ANSI pressure Class 150

- Provides pressure vessels (tanks) that are either carbon, 304 or 316 stainless steel

#### Standard offering includes units rated for up to and including ANSI pressure class 600 (application review required)

- Provides pressure vessels (tanks) available in carbon steel, 304 or 316 stainless steel materials
- Includes schedule 40, standard and 80 pipe used in the pressure vessel construction

#### Catalog units provided with NPT or ANSI Class 150 nozzle connection

- Makes installation easy. Inlet and outlet nozzle connections are threaded MNPT on 8 in. (203 mm) and smaller tanks. Class 150 flanged connections on 10 in. (254 mm) and larger tanks

#### Mounting lugs are welded onto the tank wall of all 2½ in. (64 mm) NPT and larger units

- Provides mounting support

#### General purpose, moisture resistant, enclosures available

- Offers easy access to terminal wiring

### Options

#### Terminal Enclosures

General purpose terminal enclosures, without thermostats, are supplied on all Watlow circulation heaters. Moisture and explosion resistant ratings are available to meet specific application needs. For screw plug terminal enclosures, refer to page 171. For flange terminal enclosures, refer to page 243.

#### Stand-off Terminal Enclosures

Stand-off terminal enclosures help protect terminal enclosures against excessive temperatures. For details, refer to page 239.

#### ASME Pressure Vessel Code Welding

Flange or screw plug assemblies can be provided with an ASME Section VIII, Div. I pressure vessel stamp upon request.

#### Branch Circuits

Branch circuits are designed for 48 amperes per circuit maximum. Contact your Watlow representative for circuit requirements other than those listed in the stock charts.

#### Flange mounting holes

- Straddles centerline to comply with industry standards

#### UL® and CSA component recognition under file numbers E52951 and 31388 respectively

- Meets industry safety standards

### Typical Applications

Water:

- Deionized
- Demineralized
- Clean
- Potable
- Process
- Industrial water rinse tanks
- Hydraulic oil, crude, asphalt
- Lubricating oils at API specified watt densities
- Heat transfer oil
- Paraffin
- Caustic cleaners
- Nitrogen, hydrogen and other air/gas systems
- Superheating steam

### Certified Enclosures

CSA, ATEX or IECEx certified enclosures protect wiring in hazardous gas environments. These terminal enclosures, covered under CSA file number 61707, ATEX certificate # SIRA 10ATEX 1155X or IECEx certificate # IECEx CSA 09.0010 are available on WATROD flange heaters. For additional information, see page 567 and 568 or contact your Watlow representative.

For products that will be installed in hazardous locations, please provide the following information:

- Operating conditions
- Minimum and maximum ambient temperatures for the installation location
- Mounting orientation

Watlow must understand this information so that an appropriate design can be provided.

### Thermostats

To provide process temperature control, Watlow offers optional single- and double-pole thermostats. Thermostats are typically mounted in the terminal enclosure. Optional side mounting on vessel also available.

See *Screw Plug Immersion Heaters*, page 167 and *Flange Immersion Heaters*, on page 239 for details.

# Circulation Heaters

## WATROD and FIREBAR Circulation Heaters

*Options (Continued)*

### Baffles

Baffles mounted on the heating element bundle enhance and/or modify liquid or gas flow for better heat transfer.

For critical sheath temperature and low flow conditions, baffles may be required.

Contact your Watlow representative for details.

### Thermocouples

To sense process or element sheath temperature, ASTM Type J or K thermocouples are available.

See *Screw Plug Immersion Heaters*, page 168 and *Flange Immersion Heaters*, on page 239 for details.

### Process Thermocouple in Nozzle

(Must specify which nozzle)

Ref. Tank Size	Ref. Nozzle Size	Dimension "A"
1 <sup>1</sup> / <sub>4</sub>	<sup>3</sup> / <sub>4</sub> NPT	8 <sup>3</sup> / <sub>16</sub>
2 <sup>1</sup> / <sub>2</sub>	1 NPT	8 <sup>3</sup> / <sub>16</sub>
3	1 NPT	8 <sup>3</sup> / <sub>16</sub>
4	1 <sup>1</sup> / <sub>2</sub> NPT	10 <sup>3</sup> / <sub>8</sub>
5	2 NPT	11 <sup>1</sup> / <sub>16</sub>
6	2 <sup>1</sup> / <sub>2</sub> NPT	13 <sup>3</sup> / <sub>8</sub>
8	2 <sup>1</sup> / <sub>2</sub> NPT	14 <sup>3</sup> / <sub>8</sub>

For 10 in. (254 mm) and larger tanks contact your Watlow representative for dimension.

### Sheath Materials

The following sheath materials are available on WATROD and FIREBAR heating elements:

#### Standard Sheath Materials

<b>WATROD</b>	Alloy 800/840 316 SS Steel
<b>FIREBAR</b>	Alloy 800, 304 SS

#### Made-to-Order Sheath Materials

<b>WATROD</b>	304 SS Alloy 600 Titanium Hastelloy C276
---------------	---

### Wattages and Voltages

Watlow routinely supplies circulation heaters with 120 to 690VAC as well as wattages from 500 watts to one megawatt. If required, Watlow will configure circulation heaters with voltages and wattages outside these parameters.

For more information on special voltage and wattage configurations, contact your Watlow representative.

# Circulation Heaters

## WATROD and FIREBAR Circulation Heaters

### *Options (Continued)*

#### Pressure Vessels

All catalog pressure vessel (tank) materials consist of standard schedule and 150# class forged fittings and are made from one of the following materials:

- Carbon steel
- 316 stainless steel

All catalog pressure vessels (tanks) are steel unless otherwise noted.

316 stainless steel pressure vessels (tanks) are passivated on all wetted surfaces. Available from Assembly Stock on 2<sup>1</sup>/<sub>2</sub> inch NPT and 4 or 6 inch ANSI flange circulation heaters.

---

#### Passivated Finish

For critical applications, passivation will remove free iron from all wetted surfaces.

Contact your Watlow representative for details.

---

#### Gaskets

Rubber, asbestos-free and spiral wound gaskets are available for all heater flange, and inlet and outlet flange sizes.

Watlow recommends ordering spares in case replacement becomes necessary.

To order, specify **gasket type, flange size/rating** and **process operating temperature**.

For details on gasket materials and temperature ratings, see page 240.

#### Inlet and Outlet Nozzle Connections

All inlet and outlet materials are compatible with the pressure vessel material and pressure class rating.

Vessel sizes from 1<sup>1</sup>/<sub>4</sub> to 8 inches are typically configured with MNPT (Male National Pipe Thread) nozzles. Optional NPT and flange sizes can be supplied to mate with existing piping.

10 inch and larger vessels are supplied with Class 150 inlet and outlet flanges. Optional Class 300 or Class 600 can be provided to mate with existing piping.

To order, specify **type, size** and **pressure class** rating for both inlet and outlet nozzle/flange connections.

---

#### Protective Steel Jacket (Shroud)

To protect circulation heaters from weather or wash-down conditions, partially welded (standard) outer protective steel jackets are available. Standard steel, or made-to-order 304 or 316 stainless steel or aluminum can be supplied. Jacket diameter is dependent upon thermal insulation thickness.

To order, specify **protective steel jacket, material type** and **weatherproof**, if desired.

# Circulation Heaters

## WATROD and FIREBAR Circulation Heaters

### Technical Data

#### Maximum Velocities

The rate at which a gas or liquid flows through inlet and outlet pipes is critical to maintaining the desired output temperature. Pressure drop through the circulation heater must be considered to properly size blowers or pumps. The *Maximum Velocity to Avoid Excessive Pressure Drop* chart gives recommended maximum velocities, in feet per second and meters per second of gas or liquid being heated and nominal pipe size.

#### Maximum Velocity to Avoid Excessive Pressure Drop

Fluid	Nominal Pipe Size in.	Maximum Velocity	
		ft/sec	(m/sec)
Gases	All	200	(61.0)
Liquid	4 and smaller	10	(3.0)
Liquid	6-8	15	(5.0)
Liquid	10-12	19	(6.0)
Liquid	14-16	21	(6.4)
Liquid	18-20	23	(7.0)
Liquid	24	24	(7.3)

#### Vessel Orientation Guidelines

Correctly orienting the heating vessel assures lower terminal enclosure temperatures and element immersion. Detailed instructions on vessel orientation are contained in the *Installation and Maintenance Instructions* that accompanies all circulation heaters.

The following are guidelines for vessel orientation in liquid and gas heating applications.

##### Liquids

Orient circulation heater:

- Horizontally with inlet and outlet pipes pointing up
- Vertically with the terminal enclosure up and the inlet pipe on the bottom

These orientations ensure the heating elements will be immersed at all times and help prevent premature failure.

##### Air or Gases

Orient circulation heater:

- Horizontally with the inlet nozzle closest to the terminal enclosure
- Vertically with terminal enclosure at the bottom of the tank. Use the nozzle nearest the bottom as the inlet connection

If installation constraints do not allow mounting in accordance with these guidelines, contact your Watlow representative.

#### Application Hints

- Select the recommended heating element sheath material and watt density for the substance being heated. Use the *Supplemental Applications Chart* on pages 555 to 558. If unable to determine the correct heating element type and material, contact your Watlow representative.
- Assure selecting proper vessel by considering the pressure or flow rate, process temperature and corrosiveness of the media being heated. If assistance with vessel selection is required, contact your Watlow representative.
- For maintenance/replacement procedures, retain an area twice the circulation heater's overall length to permit easy removal and inspection of screw plug or flange heater assemblies.
- Choose a FIREBAR assembly when you require:
  - A smaller package
  - More kilowatts or lower watt density in an equally sized WATROD circulation tank
- Minimize problems associated with low flow or low liquid level conditions with a low liquid level sensor and/or sheath high-limit control.
- Ensure wiring integrity by making sure terminal enclosure temperature does not exceed 400°F (205°C).
- Size power feeder wires in accordance with national electrical code guidelines and other applicable codes.
- Protect against electrical shock by properly grounding the unit per NEC requirements.
- One or more circulation heaters may be connected in series to achieve the desired total kilowatt or temperature output.

## WATROD and FIREBAR Circulation Heaters

### Performance Capabilities

- Up to 3000psi design pressure

---

### Features and Benefits

Offering includes units rated above ANSI pressure class 600

- Pressure vessel tanks are available in “H” series stainless steel, Titanium, alloy 800, alloy 600, Chrome Moly, alloy 400, Duplex and 321 stainless steel

### Options

#### Exotic Sheath Materials

Contact your Watlow representative for details and availability.

---

#### Pressure Vessels

Made-to-order units can be made in a variety of materials, flange sizes and pressure classes.

To order, specify **pressure vessel (tank) size, material and pressure class**.

Ratings to ANSI class 2500 pressure class are available for high-pressure applications.

---

#### High-Temperature Thermal Insulation

To further minimize heat loss, the pressure vessel’s standard one inch thermal insulation wrap may be replaced with thicker or higher temperature insulation. For more information, contact your Watlow representative.

To order, specify **insulation thickness, standard or high temperature insulation and temperature rating**.

Vessels may be supplied with a primer coating without insulation.

To order, specify **no insulation**.

---

#### Support Saddles

To mate with an existing installation, customized support saddle(s) and/or mounting lugs are available.

To order, specify **mounting lugs or support saddles** and supply a dimensional drawing.

1 1/4 inch NPT Screw Plug

2 1/2 inch NPT Screw Plug

### RAPID SHIP

- RS - Next day shipment
- M - Manufacturing lead times up to 5 pieces

⑤ When steel vessel materials are used in this application, some rust may be present in the process media

⑧ Can be wired for 1-phase operation

# Circulation Heaters

## WATROD and FIREBAR Circulation Heaters

### Application: Process Water®

- WATROD or FIREBAR elements
- Without thermostat
- General purpose enclosure

4 inch - 150 lb ANSI Flange

### RAPID SHIP

- RS - Next day shipment
- M - Manufacturing lead times up to 2 pieces

### WATLOW®

⑤ When steel vessel materials are used in this application, some rust may be present in the process media

Truck Shipment only

# Circulation Heaters

## WATROD and FIREBAR Circulation Heaters

### Application: Process Water®

- WATROD or FIREBAR elements
- Without thermostat
- General purpose enclosure

# Circulation Heaters

## WATROD and FIREBAR Circulation Heaters

### Application: Lightweight Oils and Heat Transfer Oils

- WATROD or FIREBAR elements
- Without thermostat
- General purpose enclosure

1 1/4 inch NPT Screw Plug

2 1/2 inch NPT Screw Plug

<sup>ⓐ</sup> Wired for 3-phase operation only

### RAPID SHIP

- **RS** - Next day shipment up to 5 pieces
- **M** - Manufacturing lead times

# Circulation Heaters

## WATROD and FIREBAR Circulation Heaters

### Application: Bunker C, Asphalt and #6 Fuel Oil

- WATROD or FIREBAR elements
- Without thermostat
- General purpose enclosure

# Circulation Heaters

## WATROD and FIREBAR Circulation Heaters

### Part Number

Stock Plug or ANSI Flange Part Number	Optional Terminal Enclosures	Optional Process Sensors	Sheath Limit Sensors

Stock Plug or ANSI Flange Part Number
<p><b>Note:</b> Catalog part numbers include optional enclosures and process sensors. To order optional enclosures or sensors, substitute the appropriate suffix.</p>

Optional Terminal Enclosures	
S =	General purpose enclosure
W =	Moisture resistant enclosure
E =	Explosion resistant enclosure
C =	Moisture/explosion resistant enclosure
<p><b>Note:</b> Catalog listings include either a general purpose enclosure or moisture/explosion resistant enclosure. Substitute enclosure options are noted.</p>	

Optional Process Sensors	
2 =	30 to 250°F, (-1 to 121°C) SPST
3 =	175 to 550°F, (79 to 288°C) SPST
4 =	40 to 110°F, (-1 to 43°C) DPST
5A =	60 to 250°F, (16 to 121°C) DPST (FIREBAR)
7A =	100 to 550°F, (38 to 288°C) DPST (FIREBAR)
J =	Type J process thermocouple in thermowell
K =	Type K process thermocouple in thermowell
<p><b>Note:</b> Thermostat part numbers are shown in the <i>Thermostat Chart</i> on page 537.</p>	

Sheath Limit Sensors	
HJ =	Type J high-limit thermocouple, horizontal mount
TJ =	Type J high-limit thermocouple, vertical/housing at top
BJ =	Type J high-limit thermocouple, vertical/housing at bottom
HK =	Type K high-limit thermocouple, horizontal mount
TK =	Type K high-limit thermocouple, vertical/housing at top
BK =	Type K high-limit thermocouple, vertical/housing at bottom
<p><b>Note:</b> Heater orientation is critical to accurate sensing of limit conditions. Use the appropriate code to indicate heater mounting orientation.</p>	

**Example Part Number:** CFONA18A10 S 5 HJ

# Circulation Heaters

## WATROD and FIREBAR Heaters

### Booster Heaters

Booster heaters are ideal for circulating applications requiring less kilowatts, including engine preheating.

Booster heaters are made from a steel or brass 1 1/4 in. (32 mm) NPT screw plug heater and insulated pressure vessel with 1 in. (25 mm) FNPT inlet and outlet. This assembly also contains an integral thermostat.

### Performance Capabilities

- Watt densities up to 60 W/in<sup>2</sup> (9.3 W/cm<sup>2</sup>)
- Wattages up to 3 kilowatts
- Voltages up to 480VAC
- Steel sheath temperatures up to 750°F (400°C)
- Alloy 800 sheath temperatures up to 350°F (175°C)

### Features and Benefits

#### Dual voltages

- Simplifies stocking and wiring

#### Carbon steel, standard pipe wall vessel

- Assures compatibility with many applications

#### One inch thick (25 mm) fiberglass thermal insulation rated to 750°F (400°C)

- Reduces heat loss

#### Steel jacket (shroud)

- Provides a fully welded and painted shroud to protect thermal insulation

#### Inlet and outlet nozzle connections

- Includes threaded FNPT connections to meet OEM standards

#### General purpose terminal enclosures

- Protects terminals and thermostat

#### Integral thermostat controls process temperatures from: 60 to 160°F (15 to 70°C) on alloy 800 sheath elements and 175 to 550°F (80 to 290°C) on steel sheath elements

- Minimizes the amount of time that the heater operates while the engine is running

### Typical Applications

- Stand by generators
- Peak power trimming generators
- Mobile generator sets
- Earth moving equipment
- Water heaters
- Lightweight oils

# Circulation Heaters

## WATROD and FIREBAR Heaters

### Booster Heaters

#### Options

##### Terminal Enclosure

General purpose terminal enclosures with integral thermostats are supplied on all Watlow booster heaters. Optional moisture resistant terminal enclosures protect wiring and thermostat from liquid contaminants. To order, request the **moisture resistant enclosure option**.

For explosion resistant and explosion/moisture resistant terminal enclosures, request the **explosion/moisture resistant option**.

Description	kW	Phase	Part Number 120/240VAC	Est. Ship. Wt. lbs (kg)

For optional housing adders, use circulation heater adders.

# Circulation Heaters

## WATROD and FIREBAR Heaters

### Engine Preheaters

Watlow engine preheaters help maintain a desired minimum engine temperature to make starting fast and easy. They also reduce engine wear caused by cold engine starting.

Engine preheaters mount conveniently on an engine or rail. The internal thermostat constantly adjusts to ambient temperature changes to keep engine coolant warm at all times.

An internal tank temperature sensor protects Watlow engine preheaters from dry-fire conditions caused by low coolant levels or blocked flow.

Installation is easy with just two mounting bolts and inlet and outlet hose connections.

### Performance Capabilities

- Watt densities from 45 to 90 W/in<sup>2</sup> (7 to 14 W/cm<sup>2</sup>)
- Wattages up to 6 kilowatts
- UL® and CSA component recognition up to 480VAC and 600VAC respectively
- Thermostatically controlled from 60 to 160°F (15 to 70°C)
- Alloy 800 sheath temperatures up to 1600°F (870°C)

### Features and Benefits

#### Alloy 800 sheath

- Minimizes the risk of premature failure in the event of a dry-fire condition

#### Integral, prewired adjustable thermostat mounted in a general purpose terminal enclosure

- Provides a ready to install unit

#### Easy installation with standard 1 in. (25 mm) diameter beaded inlet and outlet nozzles

- Provides rubber hose connections eliminating the need for threaded fittings and adapters

#### 120/240VAC or 240/480VAC dual voltages

- Makes field wiring flexible
- Minimizes stocking multiple voltages

#### Mounting bracket

- Isolates harmful engine vibration

#### Heavy-duty welded carbon steel tank

- Resists corrosion and extends life

#### Optional oil pressure interconnect switch

- Disrupts power during engine operation

#### Integral check valve

- Assures proper coolant flow and correct thermostat operation. Check valve will not interfere with adequate thermo-siphoning
- **UL® and CSA component**  
Recognition under file numbers E52951 and 31388 respectively

### Typical Applications

- Stand by generators
- Primary power generators
- Fire pump engines

### Options

#### Terminal Enclosure

The following terminal enclosures are available:

- Standard, general purpose
- Moisture resistant
- Explosion resistant Class 1, Division 1 and 2, Groups B, C and D.

# Circulation Heaters

## WATROD and FIREBAR Heaters

### Engine Preheaters

#### Application Hints

- Mount engine preheaters in horizontal position only (as shown in Figures 1, 2 and 3). Contact your Watlow representative if vertical mounting is unavoidable.
- Mount the heater near or below the lowest point on the engine block. Keep outlet nozzle pointed up, as indicated on the tank.
- Estimate kilowatt requirements with the following formula. First determine the engine displacement, then multiply:

**English**  
Cubic inches X 3 = estimated wattage

**Metric**  
Liters X 183 = estimated wattage

EXTENDED  
CAPABILITY

## Extended Capabilities For FREEFLEX® Heaters

Watlow's miniature heated polymeric tubing assemblies provide a flexible heat-up and transport system for moving fluids within diameters as small as  $\frac{1}{32}$  in. (0.8 mm). The FREEFLEX® heater heats fluids up to 212°F (100°C) and maintains temperature during transfer from a reservoir to a point of use. In some applications, the tubing can actually serve as the reservoir for limited volumes of fluid, helping to reduce start-up times. For higher temperatures, contact your Watlow representative.

Watlow's innovative design places the heating element and sensor directly in contact with the perimeter of the tubing to produce efficient, responsive heating and temperature control of the tube contents. The element is evenly wound to ensure reliable, close contact for uniform heating along a portion or the entire length of the line. A flexible, durable jacket covers the wound element to let the tubing flex and move in a dynamic system. This allows for fluid delivery to multiple locations from a single supply source. In stationary applications, the FREEFLEX heated tubing is conveniently routed through available space or around other system components. This saves space and provides an uncomplicated retrofit in existing systems.

The FREEFLEX heater's efficient heating element design can incorporate an optional thermocouple, thermistor or resistance temperature detector (RTD) temperature sensor into the thermal package. Users can select leads to exit from one or both ends of the assembly. Typical standard PTFE tubing is available in  $\frac{1}{32}$ ,  $\frac{1}{16}$ ,  $\frac{1}{8}$  or  $\frac{3}{16}$  in. (0.8, 1.6, 3.2, 4.8 mm) inside diameters. Contact your Watlow representative for other sizes and materials.

### Features and Benefits

#### Flexible heat-up and transport system

- Eliminates the need for heated reservoir systems in many applications

#### Direct contact between the heating element and tubing

- Provides fast, efficient, highly responsive heating

#### Available in three configurations

- FREEFLEX design allows tubing to flex, coil or bend around system components, enabling convenient retrofits
- Pre-formed design allows a longer tube length in a smaller volume
- Molded design provides a compact heating assembly for easy installation

#### Integral sensors

- Maintain close control of heater and fluid temperatures

#### Low voltage design

- Ensures safety

#### Miniature sizes as small as $\frac{1}{32}$ in. (0.8 mm) inside diameter

- Heats and transports fluids within tiny spaces

#### Convenient retrofit

- Allows for routing flexible tubing around system components and using existing control system

#### UL® recognition

- Available on qualified designs by request

### Typical Applications

- **Medical:** automated clinical analyzers, tissue processing equipment
- **Analytical:** sample preheating for LC and HPLC systems, breathalyzers
- **Semiconductor processing:** wafer drying equipment, DI water heating
- **Printing:** ink jet printers, rapid prototyping systems, photo lithography
- **General process:** wax/paraffin processing and non-combustible gas heating
- **Water purification systems**
- **Precision cleaning equipment**
- **Aerospace**
- **Military**

## Extended Capabilities For FREEFLEX Heaters

### Typical Application Requirements

When requesting a quote please specify:

- **Fluid Type**
  - **Inlet Temperature**
  - **Outlet Temperature**
  - **Flow Rate**
  - **Voltage** - Typically less than 36V
  - **Watts/ft** - See chart on previous page for typical values
  - **Maximum Allowable Outside Surface Temperature**
  - **Tube Size**
    - 1/32 in. (0.8 mm) I.D. x 1/16 in. (1.6 mm) O.D.
    - 1/16 in. (1.6 mm) I.D. x 1/8 in. (3.2 mm) O.D.
    - 1/8 in. (3.2 mm) I.D. x 3/16 in. (4.8 mm) O.D.
    - 3/16 in. (4.8 mm) I.D. x 1/4 in. (6 mm) O.D.
    - Other (specify size)
  - **Tube Material**
    - PTFE standard
    - Silicone rubber
    - Others upon request
  - **Tube Length** - 12 to 120 in. (305 to 3048 mm) typical
    - Total
    - Heated
    - Unheated (specify)
  - **Tube Fittings**
    - No fittings (1 in. [25 mm] bare tubing each end)
    - Other (specify)
  - **Tube Flexing**
    - Static (to route around components in system)
    - Dynamic (subject to more continuous flexing)
    - Occasional, frequent or continuous
- Note:** Min. recommended flexing radius
- 1/32 in. (0.8 mm) I.D. x 1/16 in. (1.6 mm) O.D. PTFE 1 in. (25 mm)
  - 1/16 in. (1.6 mm) I.D. x 1/8 in. (3.2 mm) O.D. PTFE 1 1/2 in. (38 mm)
  - 1/8 in. (3.2 mm) I.D. x 3/16 in. (4.8 mm) O.D. PTFE 2 in. (51 mm)
  - 3/16 in. (4.8 mm) I.D. x 1/4 in. (6 mm) O.D. PTFE 3 in. (76 mm)

- **Heater Leads**
  - One at each end
  - Both at one end
  - Standard lead insulation (UL® Style 1180 CSA white PTFE)
  - Other insulation (specify)

### Heater Lead Length

- Standard 12 in. (305 mm) w/customer end stripped/tinned 1/2 in. (13 mm)
- Other (specify)

### Heater Lead Exit Direction

- Inboard/outboard

### Temperature Sensor

- Thermocouple (#30 AWG PFA - Type J)
- Thermistor (specify) 10KΩ at 72°F (25°C) standard
- Other temperature sensors size/types (specify)
- Sense heater element or tube temperature

### Sensor Lead Exit Direction

- Inboard/outboard

### Temperature Sensor Lead Length

- 12 in. (305 mm)
- Other (specify)

### Typical FREEFLEX Layout

### Lead Orientation

### Lead Location

### Sensor Location/Mounting Description

## Extended Capabilities for Syringe Heaters

The Watlow syringe heater was developed to match the unique needs of medical injection applications. It produces consistent results by reducing temperature and viscosity variations. Fluid and drug delivery that maintain precise liquid temperatures and reduce fluid viscosity maximize patient comfort and reduce risk. Body temperature injections are more easily introduced, particularly for patients in a frail or distressed condition.

The Watlow syringe heater is available in two configuration types with an optional, repeatable temperature sensing controller. The silicone/wire configuration accommodates varying syringe size needs. The translucent, high-tech laminate construction of the polycarbonate/foil design enables fluid levels and air bubbles to be easily viewed and monitored. Both heater forms are designed to “snap” on to the syringe with one hand and hold firmly during a procedure.

An overmold design houses the optional electronic controller and/or temperature sensor to allow trouble-free servicing and extend heater life. The overmold can be modified and color matched for seamless, integrated appearance.

### Features and Benefits

#### Long operational life

- Improves system reliability
- Reduces equipment down time and minimizes the need to reschedule procedures

#### Two heater configurations provide flexibility and adaptability

- Silicon wire enables maximum flexibility to accommodate various syringe sizes
- Polycarbonate/foil provides high tech appearance and functionality

#### Customizable to most OEM requirements

- Allows over-mold to be modified and color matched for a seamless, integrated appearance

#### Optional precise, repeatable temperature sensing control

- Maximizes patient comfort
- Minimizes patient risk
- Increases the consistency of test results by eliminating temperature and viscosity variations
- Carries a longer product life than bimetal thermostats

### Specifications

#### Silicone/Wire and Polycarbonate/Foil

- Length: 5 in. (127 mm) max.
- Formed heater diameter: formed to fit syringe. Typical diameter is 2 in. (50 mm) to 6 in. (150 mm)\*
- Voltage: dependent on application, over 48V may impact agency approvals
- Control accuracy: 5.4°F ( $\pm 3^{\circ}\text{C}$ )
- Max. operating surface temperature: 185°F (85°C)
- Approximate control pod dimensions: 1 x 1 x 2.75 in. (25 x 25 x 70 mm)\*
- Cord pull strength: Up to 89 N (20 lb<sub>F</sub>)\*

\* Dependent on design requirements.

# Air Heaters

## Duct Heaters

### LDH SERIES and D SERIES

Constructed of sturdy 0.430 in. (11 mm) diameter WATROD™ heating elements mounted to a 1/4 in. (6 mm) thick steel flange, duct heaters are easily adapted to many non-pressurized air-heating systems.

They are easily installed in applications requiring a wide range of temperature versus air flow combinations.

The modular duct heater offers increased reliability. The individual modules are removable through the housing of the assembly, which eliminates the need to pull the complete heater from the duct work. This reduces downtime costs because the heating elements can be replaced individually. Performance improvements include quicker response time and reduced infiltration from the air stream being heated into the electrical enclosure.

Watlow® duct heaters offer advantages over gas or oil fired and open coil electric units with:

- Installation flexibility—no flues or fuel lines
- 100 percent energy efficient—no energy loss up the flue
- Universal availability of electricity
- Resistance coil in sheath is protected from corrosive environments

### Performance Capabilities

- Watt densities up to 40 W/in<sup>2</sup> (6.2 W/cm<sup>2</sup>)
- Recommended process temperatures from -20 to 1200°F (-29 to 650°C)
- Catalog P/N wattages up to 225kW
- Voltages up to 600VAC

### Features and Benefits

#### Long life alloy 840 sheath

- Resists corrosion/oxidation while protecting resistance coils against contamination

#### MgO insulation filled elements compacted to rock hard density

- Maximizes dielectric strength, heat transfer and life

#### Field replaceable heating elements

- Permits easy service and reduces downtime. Element change-out is made simple by a single screw clamp (D SERIES only)

#### 3 1/2 in. (90 mm) thick mineral insulation

- Keeps wiring cooler and reduces heat loss

#### Silicone resin seals rated to 221°F (105°C)

- Protects elements against moisture and other contaminants

#### General purpose terminal enclosure

- Offers easy access to wiring

#### 1/4 in. (6 mm) inside diameter thermowell

- Accepts an optional Type J or K thermocouple for accurate sheath temperature sensing (D SERIES only)

#### Rigid stainless steel supports

- Prevents element sagging or deformation in various mounting positions

#### 1/4 in. (6 mm) thick steel flange with 3/8 in. (9.5 mm) diameter mounting holes

- Easily bolts to the duct wall

#### WATROD hairpins are repressed (recompacted) after bending to assure MgO density

- Eliminates hot spots and electrical insulation voids

#### Stock heaters feature from 3 to 60 elements

- Meets a wide variety of kilowatt demands

#### One or three phase voltages

- Meets local power supplies

#### Maximum 48 amperes per circuit

- Complies with National Electrical Code (NEC)

Duct heaters with general purpose enclosures meet UL® and CSA component recognition to 480 and 600VAC maximum respectively—UL® and CSA file numbers are E52951 and 31388

# Air Heaters

## Duct Heaters

### LDH SERIES and D SERIES

#### Typical Applications

- Drying ovens
- Autoclaves
- Furnaces
- Load banks
- Heat treating
- Reheating
- HVAC
- Paint drying

#### Choosing a Duct Heater

The English and metric graphs, shown on the following pages will help you to select the correct duct heater. These graphs include: *Watt Density vs. Air Temperature/Velocity*, *Watt Density vs. Sheath Temperature and Pressure Drop vs. Air Velocity*.

These graphs, with the quick formulas on this page, along with information specific to your application, will determine the correct duct heater specifications. However, if engineering assistance is needed, contact your Watlow representative.

#### Required Application Information

- Desired outlet air temperature
- Inlet air temperature
- Delta T—the temperature difference between inlet and desired outlet temperature
- Air volume (CFM/CMM) measured at both inlet temperature and pressure
- Air velocity in feet per minute (FPM); meters per minute (MPM) which equals:

<b>English</b>	
$FPM =$	$\frac{\text{CFM measured at standard conditions}}{\text{Duct cross section area at heater in ft}^2}$
<b>Metric</b>	
$MPM =$	$\frac{\text{CMM measured at normal conditions}}{\text{Duct cross section area at heater in m}^2}$

- Minimum duct heater wattage (kW). This can be determined by:

<b>English</b>	
$kW =$	$\frac{\text{CFM} \times \text{Delta T (}^\circ\text{F)} \times 1.1 \text{ (safety factor)}}{3000}$
<b>Metric</b>	
$kW =$	$\frac{\text{CMM} \times \text{Delta T (}^\circ\text{C)} \times 1.1 \text{ (safety factor)}}{48}$

**Note:** The duct heater, or combination of duct heaters, used for the process should be equal to or exceed the minimum wattage calculation.

# Air Heaters

## Duct Heaters

### LDH SERIES and D SERIES

#### Watt Density vs. Air Temperature/Velocity

To decide watt density requirements, first determine the desired outlet air temperature and velocity in feet per minute. Then, follow the lines on the graph for velocity and process temperature to the watt density

curve's intersecting point. This shows the recommended watt density based on a maximum sheath temperature of 1400°F (760°C). **For longer heater life, lower watt densities should be chosen.**

#### Watt Density vs. Sheath Temperature

The *Watt Density vs. Sheath Temperature* graph shows the air velocity (FPM or MPM) required to operate a WATROD duct heater at specific watt densities or sheath temperatures. Also depicted is the appropriate watt density vs. sheath temperature at a specified air flow.

# Air Heaters

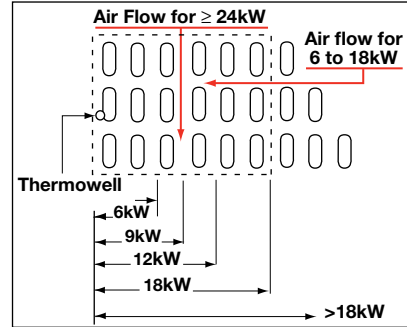

## Duct Heaters

### LDH SERIES and D SERIES

#### Pressure Drop vs. Air Velocity

The rate at which pressure drops through the duct heater is critical for properly sizing blowers and pumps. *The Pressure Drop vs. Air Velocity* graph gives recommended maximum velocities in feet per minute and meters per minute according to the air velocity and duct heater size.

To determine the pressure drop through the duct heater, follow the air velocity (FPM or MPM) over to the appropriate curve, which identifies the duct heater size. Then, take the intersecting point down to the approximate pressure drop value.

**Note:** Viewing from the element ends—the recommended air flow direction through element bundle changes at >18kW.

① FIREBAR® flat tubular element duct heaters are available as extended capabilities to enhance your application output or performance. Although duct heaters are not normally constructed with FIREBAR elements, the pressure drop reduction using FIREBAR as a distinct advantage is shown above.

## Options

### Wattages/Voltages

To meet specific application needs, voltage and wattage combinations outside stock product parameters are available.

For more information about this option, contact your Watlow representative.

# Air Heaters

## Duct Heaters

### LDH SERIES and D SERIES

#### Options (Continued)

#### Terminal Enclosures

In addition to the standard, general purpose terminal enclosure, Watlow offers a moisture resistant optional terminal enclosure to meet specific application requirements.

#### Thermocouples

**Type J** or **K** thermocouples, inserted in the thermowell, accurately sense element sheath temperature for over-temperature conditions.

To sense process temperature, the sensing element should be located downstream from the duct heater. This will eliminate incorrect sensing caused by radiant heat.

Thermocouples are supplied with 120 in. (3050 mm) leads, longer lead lengths are available (this applies to “D” SERIES only). Unless otherwise specified, thermocouples are supplied with temperature ranges detailed on the *Thermocouple Types* chart.

Using a thermocouple requires an appropriate temperature and power controller. These must be purchased separately. Watlow offers a wide variety of temperature and power controllers to meet virtually all applications. Temperature controllers can be configured to accept process variable inputs, too. Contact your Watlow representative for details.

To order a thermocouple, add the appropriate suffix letter to the duct heater’s base part number, as indicated on the *Ordering Information* chart on page 404.

Duct heater thermowell holds thermocouple for sensing sheath temperature.

#### Thermocouple Types

ASTM Type	Conductor Characteristics		Recommended <sup>①</sup> Temperature Range	
	Positive	Negative	°F	(°C)
J	Iron (Magnetic)	Constantan (Non-magnetic)	0 to 1000	(-20 to 540)
K	Chromel® (Non-magnetic)	Alumel® (Magnetic)	0 to 2000	(-20 to 1100)

① **Type J** and **Type K** thermocouples are rated 32 to 1382°F and 32 to 2282°F (0-750°C and 0-1250°C), respectively. Watlow does not recommend exceeding temperature ranges shown on this chart for the tubular product line.

#### Application Hints

- Mount duct heaters horizontally to lower enclosure temperatures and promote unit life.
- Orient heating elements as per the air flow illustration on page 394.
- Promote heater life by keeping sheath temperature below the 1400°F (760°C) maximum.
- Measure process temperature in the outlet stream, away from the heater.
- Maintain wiring integrity by keeping enclosure temperature below 400°F (205°C).
- Thermal cycling can cause terminations to loosen. Periodically check and tighten all electrical connections.
- Size power feeder wires in accordance with NEC and other applicable codes.
- Protect employees against electrical shock by properly grounding the unit per NEC specifications.

## Extended Capabilities For Duct Heaters

### *LDH SERIES and D SERIES*

#### Performance Capabilities

- Wattages to 2.2 megawatts

#### Features and Benefits

##### **Ceramic fiber insulation available**

- Keeps wiring cooler and reduces heat loss

##### **Greater than 1/4 in. (6 mm) with 304 or 316 stainless steel flange material**

- Easily bolts to the duct wall

##### **60 plus element designs available**

- Meets a wide variety of kilowatt demands

#### Options

##### **Sheath Material**

Watlow duct heaters can be made with the following sheath materials:

- 304, 316, 321 SS
- Alloy 800, 840
- Laminated alloy 600 (hi-temp)
- Hastelloy C276

Contact your Watlow representative for details and availability.

##### **Terminal Enclosures**

In addition to the standard, general purpose terminal enclosure, Watlow offers the following optional terminal enclosures to meet specific application requirements:

- Explosion resistant (contact your Watlow representative)
- High-temperature stand-off enclosures

# Air Heaters

## Duct Heaters

### LDH SERIES

#### Application: High Temperature Air 800°F (427°C)

- Welded alloy 840 WATROD elements
  - Without thermostat
  - General purpose enclosure
  - Steel flange
- ① 3 and 6 element heaters have (1) 1 inch NPT conduit opening; 9, 12 and 15 element heaters have (2) 1 inch NPT conduit openings; 18 element heaters have (2) 1 1/2 inch NPT conduit openings; 21 element (B= 20 1/4 in.) heaters have (2) 1 1/2 inch NPT conduit openings; remaining 21 and 24 element heaters have (3) 1 1/2 inch NPT conduit openings
- ② All flanges are 12 inches wide

#### Notes:

- See *Watt Density vs. Air Temperature/Velocity* charts on page 393 to confirm suitability in the application.

# Air Heaters

## Duct Heaters

### LDH SERIES

### Application: Medium Temperature Air 750°F (399°C)

- Welded alloy 840 WATROD elements
  - Without thermostat
  - General purpose enclosure
  - Steel flange
- ① 3 and 6 element heaters have (1) 1 inch NPT conduit opening; 9, 12 and 15 element heaters have (2) 1 inch NPT conduit openings; 18 element heaters have (2) 1 1/2 inch NPT conduit openings; 21 element (B= 20 1/4 in.) heaters have (2) 1 1/2 inch NPT conduit openings; remaining 21 and 24 element heaters have (3) 1 1/2 inch NPT conduit openings
- ② All flanges are 12 inches wide

# Air Heaters

## Duct Heaters

### D SERIES

### Application: High Temperature Air 800°F (427°C)

- Removable alloy 840 WATROD elements
- Without thermostat
- General purpose enclosure
- Steel flange

- ① 6 and 12 element heaters have (1) 1 inch NPT conduit opening; 18, 24, 30 and 42 element heaters have (2) 1 inch NPT conduit openings; 36, 48, 54, and 60 element heaters have (2) 1 inch NPT and (2) 1 1/4 inch conduit openings
- ② All flanges are 12 inches wide

## Duct Heaters

### LDH SERIES and D SERIES

#### Replacement Elements

Replaceable heating elements provide easy field service and reduce downtime. Element change-out is made simple by a single screw clamp.

To order replacement elements, specify the **replacement element part number** (from the table) that corresponds to the original Watlow duct heater part number. Then, specify **quantity**.

#### Replacement Elements

## Duct Heaters

### LDH SERIES and D SERIES

#### Part Number

Stock Duct Part Number	Optional Terminal Enclosures	Optional Process Sensors	Sheath Limit Sensors

#### Stock Duct Part Number

**Note:** Catalog part numbers include optional enclosures. To order optional enclosures or sensors, substitute the appropriate suffix.

#### Optional Terminal Enclosures

S = General purpose enclosure

W = Moisture resistant enclosure

**Note:** Catalog listing is a general purpose enclosure. Substitute enclosure options are noted.

#### Optional Process Sensors

PJ = Type J process thermocouple in thermowell

PK = Type K process thermocouple in thermowell

#### Sheath Limit Sensors

HJ = Type J high-limit thermocouple

HK = Type K high-limit thermocouple

**Example Part Number:** D6SX10 S J HJ

# Air Heaters

## Duct Heaters

### MDH SERIES

Watlow has developed a line of process air heaters offering improved performance and increased versatility in medium to low temperature applications.

The duct heaters are modular and consist of two parts. The first is a 6 kilowatt heater available in either 240 or 480 volts, single- or three-phase.

The second part of the heater consists of the electrical housing protecting each module's termination area and a main flange that bolts into the user's ductwork. The heater modules are installed in the housing and main flange via rectangular slots in the main flange. The range of modules that can be accommodated in various duct heater assemblies, range from 1-10 modules. A range of 6 to 60 kilowatts, in 6 kilowatt increments is achieved.

The new design of the modular duct heater offers increased reliability. The individual modules are removable through the housing of the assembly, which eliminates the need to pull the complete heater from the ductwork. This reduces downtime and costs because the heating elements can be replaced individually.

Performance improvements include quicker response time and reduced infiltration from the air stream being heated into the electrical enclosure.

### Features and Benefits

#### Individual modules removable through housing

- Reduces downtime for replacement of module

#### Smaller diameter elements (0.315 inch)

- Results in a 25 percent lower energy usage on initial heat-up

#### 27 percent reduction in heat-up time as compared to traditional 0.430 inch diameter duct heater elements

- Results in faster response time

#### 31 percent lighter weight than traditional tubular duct heaters

- Reduces shipping costs and increases worker safety

#### Greater free cross sectional area

- Results in lower pressure drop

#### Improved seal between element and electrical housing

- Results in lower electrical housing temperature

#### Flexible module wiring

- Allows user to sequentially stage modules

### Typical Applications

- Low temperature ovens
- Parts drying
- Semiconductor clean room environmental heating
- Plastic curing
- Load banks
- Heated air knives
- Food dehydration
- Heat shrink tunnels

## Duct Heaters

### MDH SERIES

#### Individual Module Dimensions

##### Specifications

- Module rating - 240 or 480VAC, 6kW, three-phase or one-phase
- Watt density - 26 W/in<sup>2</sup>
- Elements - 0.315 inch dia. alloy 840 elements
- High-limit thermocouple installed by drilling premarked hole in flange
- 6-60kW range when mounted in duct heater assembly

##### Application Information

- Maximum sheath temperature = 1200°F (649°C)
- Maximum outlet temperature = 750°F (399°C)

## Options

### Terminal Enclosures

Terminal enclosures are available in general purpose and moisture resistant configurations.

### High-Limit Thermocouples

High-limit thermocouples can be supplied on specified modules or shipped as a kit. Available thermocouples are Types J and K.

### Blank Module Covers

Module covers are available for covering blank slots on the main flange. This allows for adding heater module at a later time to allow higher wattage outputs.

Watlow Part Number	Description
<b>Replacement Modules</b>	
<b>M63</b>	6kW, 240V, 3 phase
<b>M610</b>	6kW, 240V, 1 phase
<b>M65</b>	6kW, 480V, 3 phase
<b>M611</b>	6kW, 480V, 1 phase
<b>High Limit Thermocouple Kits</b>	
<b>MTCJ</b>	Type J (0-1000°F)
<b>MTCK</b>	Type K (0-2000°F)
<b>Blank Module Covers</b>	
<b>MBLK</b>	Cover slots in main flange

# Air Heaters

## Finned Heaters

### 375 Finned Strip Heaters

Watlow's 375 finned strip heater is constructed of highly-compacted magnesium oxide (MgO) based insulation, which conducts heat efficiently from the nickel chromium element wire to the sheath. Two-inch wide (51 mm) nickel plated fins are attached to maximize surface contact allowing heat to transfer into the air faster. Lower sheath temperature and element life are maximized by this finned construction.

### Performance Capabilities

- Aluminized steel sheath temperatures up to 1100°F (595°C)
- Watt density up to 33 W/in<sup>2</sup> (5.1 W/cm<sup>2</sup>)
- UL<sup>®</sup> approved up to 240VAC (File No. E52951)
- CSA approved up to 480VAC (File No. LR7392)

### Features and Benefits

#### Nickel chromium element wire is centered in the heater

- Ensures temperature uniformity

#### Aluminized steel sheath

- Operates at higher temperatures
- Resists corrosion more effectively than iron-sheathed heaters

#### Optional 430 stainless steel sheath

- Provides a durable solution for highly-corrosive environments

#### Welded post terminals

- Produces strong, trouble-free connections

#### Available lengths from 5<sup>1</sup>/<sub>2</sub> to 48 in. (140 to 1220 mm)

- Fits a variety of application needs

### Typical Applications

- Enclosure heating
- Load bank resistors
- Shrink tunnels
- Duct heaters
- Space heaters
- Drying ovens
- Incubators
- Air heating
- Heat curing
- Ink drying
- Food warmers
- Moisture protection
- Dehumidifiers
- Stress relieving ovens

## Finned Heaters

### 375 Finned Strip Heaters

#### Applications and Technical Data

#### Calculating Watt Density

Use the graph and formulas to ensure that the maximum allowable watt density for the heater is not exceeded in the application.

Open air watt density is calculated for the total heated surface area.

#### Formulas

$$\text{Watt Density} = \frac{\text{Wattage}}{\text{Heated Area}}$$

$$\begin{aligned} \text{Heated Area} \\ (\text{Offset Terminals}) &= [\text{Overall Length (A)} - 4 \text{ in.}] \\ &\quad \times 3.75 \text{ in.} \\ &= [\text{Overall Length (A)} - 102 \text{ mm}] \\ &\quad \times 95.3 \text{ mm} \end{aligned}$$

$$\begin{aligned} \text{Heated Area} \\ (\text{Parallel Terminals}) &= [\text{Overall Length (A)} - 3.12 \text{ in.}] \\ &\quad \times 3.75 \text{ in.} \\ &= [\text{Overall Length (A)} - 79.3 \text{ mm}] \\ &\quad \times 95.3 \text{ mm} \end{aligned}$$

$$\begin{aligned} \text{Heated Area} \\ (\text{One-on-One Terminals}) &= [\text{Overall Length (A)} - 4.25 \text{ in.}] \\ &\quad \times 3.75 \text{ in.} \\ &= [\text{Overall Length (A)} - 108 \text{ mm}] \\ &\quad \times 95.3 \text{ mm} \end{aligned}$$

# Air Heaters

## Finned Heaters

### 375 Finned Strip Heaters

#### Termination Options

#### Offset Terminals

Two 10-24 threaded post terminals are offset from each other on the same end.

#### One-on-One Terminals

Two 10-24 threaded post terminals are placed one on each end.

#### Parallel Terminals

Two 10-24 threaded post terminals are used; both terminals on one end.

#### In-Line Terminals

Two 10-24 threaded post terminals are in-line with each other on the same end.

# Air Heaters

## Finned Heaters

### 375 Finned Strip Heaters

#### Termination Options *(Continued)*

#### Metallic Terminal Boxes - Variations

Metallic terminal boxes are available from stock on offset terminals. Terminal boxes act as a safety feature by covering the terminals. A conduit may be attached to the box through  $\frac{7}{8}$  in. (22.2 mm) diameter holes in the ends of the box. To order, specify **terminal box**.

Available on in-line terminals only.

Available on offset terminals from stock and manufactured.

## Accessories

### Secondary Insulation Bushings

Insulators are suitable when air heating and/or voltage to ground is a concern. A secondary insulation bushing kit, part number **Z-5230**, contains one set of bushings for one heater. To accommodate bushings,  $\frac{17}{32} \times \frac{11}{16}$  inch diameter mounting holes **must** be specified when ordering.

**Note:** Number of fins are dependent on length of heater.

### Ceramic Terminal Covers

Ceramic terminal covers offer a convenient and economical method to insulate post terminals. A 10-24 screw thread is sized for standard length posts and is supplied as an accessory item and shipped separately. Specify **Z-4918** and quantity.

# Air Heaters

## Finned Heaters

### FINBAR™ Single-Ended Heaters

Composed of aluminized steel fins press fitted to a one-inch single-ended FIREBAR element. The FINBAR™ is designed to improve heat transfer to the air and permits putting more power in tighter spaces—like forced air ducts, dryers, ovens and load bank resistors.

Heat transfer, lower sheath temperature and element life are all maximized by its finned construction. Installation is simplified by terminations exiting at one end and mounting accommodations on both ends.

### Performance Capabilities

- Watt densities up to 50 W/in<sup>2</sup> (7.7 W/cm<sup>2</sup>)
- 304 stainless steel sheath temperatures up to 1200°F (650°C)
- Voltages up to 480VAC
- Amperages up to 48 amperes per heater or 16 amperes per coil

### Features and Benefits

#### Rugged aluminized steel fins

- Provides an increase in surface area to approximately 16 square inches for every linear inch of element length. Fins press fitted to the heating element improve heat transfer to the air

#### Single-ended termination

- Simplifies wiring and installation

#### Stainless steel mounting bracket, welded to the terminal end, supplied with a slotted end

- Allows ease of installation

#### Lavacone seals

- Provides protection against humid storage conditions, moisture retardant to 221°F (105°C)

### Typical Applications

- Forced air heating for dryers, ovens, ducts
- Still air heating for ovens, comfort heating
- Incubators
- Ink drying
- Load bank resistors

**For detailed product and technical data,  
see the full FINBAR product  
section located on pages 112 through 114.**

# Air Heaters

## FIREROD® Cartridge Heaters

The Watlow® FIREROD® cartridge heater incorporates engineering excellence and is supported by almost 60 years of solid industry performance across a broad range of simple and complex applications. As the premier choice in swaged cartridge heating, thousands of industrial manufacturers continue to choose Watlow as their trusted thermal partner and certified cartridge heater supplier.

Built using premium materials and tight manufacturing controls, the FIREROD heater provides superior heat transfer, uniform temperatures, resistance to oxidation and corrosion and a long life even at high temperatures. Every system component that leaves our manufacturing facilities meets our strict quality assurance specifications, in addition to those set forth by leading standards and regulating industries.

FIREROD offers many delivery programs to meet your needs.

### Performance Capabilities

- Part temperatures up to 1400°F (760°C) on alloy 800 sheath
- Watt density dependent on flow rate and orientation of the heater
- Maximum voltage up to 480V

### Features and Benefits

#### Nickel-chromium resistance wire

- Ensures even and efficient distribution of heat to the sheath

#### Conductor pins

- Provide a metallurgical bond to the resistance wire
- Ensure a trouble-free electrical connection

#### Magnesium oxide insulation of specific grain and purity

- Results in high dielectric strength and contributes to faster heat-up

#### Alloy 800 sheath

- Resists oxidation and corrosion from heat, many chemicals and atmospheres

#### Minimal spacing between the element wire and sheath

- Results in lower internal temperature
- Accommodates a design with fewer or smaller heaters

operating at higher watt densities

### International Organization for Standardization (ISO) 9001 certified

- Provides confidence that quality and reliability expectations are met

### UL® and CSA approved flexible stranded wires

- Lead insulation rated to temperatures up to 480°F (250°C)

### Patented lead adapter (LA) method

- Allows same day shipment on more than 150,000 configurations of stock FIREROD heaters and lead combinations

**For detailed product and technical data,  
see the full FIREROD product  
section located on pages 11 through 47.**

# Air Heaters

## Enclosure Heaters

### WATROD Heaters

Designed to prevent freezing and condensation in electrical and mechanical housings, the WATROD element is enclosed in a perforated, aluminized-steel bracket.

### Performance Capabilities

- Watt densities up to 15 W/in<sup>2</sup> (2.3 W/cm<sup>2</sup>)
- Wattages up to 1000 watts
- UL® and CSA component recognition up to 250VAC

### Features and Benefits

#### Stainless steel sheath wall

- Resists corrosion and protects the heating coil from exposure

#### Silicone resin seal

- Provides protection against humid storage conditions and is effective to 390°F (200°C)

#### Perforated aluminized-steel mounting bracket

- Eases installation and helps prevent direct contact with the heating element

#### Stock straight projection Type B #10-32 screw lug terminals

- Provides easy electrical connection

#### Made-to-order threaded stud

- Provides quick connect and flexible lead wire termination options.

### Typical Applications

- Control panels
- Traffic signal boxes
- Automated teller machines
- Switch gear
- Electronic equipment

### Application Hints

- Locate heater(s) in the lowest portion of the enclosure to maximize convection heating
- Place thermostat(s) in the upper half of the enclosure, away from the heater(s)

## Enclosure Heaters

### Silicone Rubber Heaters

Designed for freeze and condensation protection, Watlow's enclosure heaters are rugged, reliable and safe to operate. These rectangular-shaped, wire-wound silicone rubber heaters can be ordered individually with adhesive or vulcanized to an aluminum mounting plate. A thermostat can be attached to the heater or mounted separately as shown.

### Performance Capabilities

- Watt density rating of 5 W/in<sup>2</sup> (0.8 W/cm<sup>2</sup>)
- Temperature up to 150°F (66°C)

### Features and Benefits

#### Pressure-sensitive adhesive mounting to an aluminum plate or customer cementing

- Reduces installation time
- Creates easy installation

#### Several standard thermostat set points

- Ensures protection against freezing with minimal energy consumption

#### Variety of installation options

- Provide the option to utilize cement installation to ensure permanent heater attachment
- The pressure sensitive adhesive installation option saves assembly time
- Facilitate assembly and disassembly with factory installed aluminum plate mount

#### Remote thermostat option

- Provides optimal choice of heater location versus temperature control location

#### Lead options

- Allows for a variety of applications
- Allows different lead lengths for a variety of wiring requirements

#### Factory pre-wired heater and thermostat

- Ensures safety and reliability as there are no exposed electrical connections

### Typical Applications

Freeze or condensation prevention in housings containing electronic equipment including:

- Traffic signal boxes
- Automated teller machines
- Temperature control panels
- Gas or liquid control valve housings

# Air Heaters

## Enclosure Heaters

### Silicone Rubber Heaters

#### Options

#### Aluminum Mounting Plate

Both vertical and horizontal mounting can be accomplished with enclosure heaters. Mounting plates are 0.040 in. (1.02 mm) thick, specified as #3003 H14 aluminum. The preferred orientation is vertical with a thermostat attached at the lower end (as shown in the drawing).

For horizontal mounting, a remote thermostat is recommended. An enclosure heater can be ordered by itself, with PSAS or vulcanized to an aluminum mounting plate. See the *Thermostat* section below for more information.

- ① 4 in. (102 mm) on 5 in. (127 mm) unit.
- ② 0.5 in. (13 mm) on 5 in. (127 mm) unit.

## Thermostats

### Mounted on Heater

Built-in snap action thermostats from Watlow sense air temperature. See the ordering chart on the following page for available settings.

### Remote From Heater

For an air sensing thermostat that is separate from the heater, the ST-207E is ideal. It is a modified ST-207 mounted on a 1/32 in. (0.8 mm) thick G-10 circuit board with the thermostat's metal cap exposed to sense air temperature. The thermostat is placed at the midpoint of the lead length. The sensor can be preset at the temperatures listed for integral sensors.

#### Notes:

- On both integral and remote sensors, the thermostat's exposed metal cap is vulnerable to impact. This could defeat the thermostat's switching action and cause heater malfunction.
- T-10 thermostats are not recommended for enclosure heating applications.

# Air Heaters

## Enclosure Heaters

### Silicone Rubber Heaters

#### Technical Data

#### Determining Minimum Wattage Requirements For Enclosures

This chart is an excellent guide for determining total wattage requirements for both insulated and uninsulated enclosures, assuming the box is relatively airtight.

For windy conditions, add an additional 50 percent to the wattage requirement listed.

		Total Enclosure Surface Area — Square Feet (Square Meters)													
		2 (0.2)	3 (0.3)	4 (0.4)	5 (0.5)	6 (0.6)	7.5 (0.7)	9 (0.8)	10 (0.9)	15 (1.4)	20 (1.9)	25 (2.3)	30 (2.8)	40 (3.7)	50 (4.7)

## MULTICELL™ Heaters

The advanced design of the MULTICELL™ insertion heater from Watlow® offers three major advantages: extreme process temperature capability, independent zone control for precise temperature uniformity and loose fit design for easy insertion and removal.

### Performance Capabilities

- Engineered to achieve sheath temperatures up to 2050°F (1120°C)
- Up to six independently controllable zones

### Features and Benefits

#### Multiple, independently controllable zones

- Allows process temperature uniformity not possible with any other single-sheathed heater

#### Radiant design of heater

- Allows for loose insertion in boiling holes and piping holes
- Permits easy removal and replacement with minimal down time since it will not bind or seize in the hole

#### Oxidized sheath

- Provides high emissivity and improves the heater's performance as oxidation increases

#### Individual metal-sheathed coils swaged into a larger, high-temperature alloy outer sheath

- Provides maximum protection against element burnout through the outer sheath

#### Quick disconnect plug and jack

- Permits fast replacement of individual elements while the press stays at operating temperature

#### Special bending capabilities

- Solves unusual machinery needs and keeps leads away from heated zones

#### Flexible leads up to 842°F (450°C)

- Protects termination from high temperature environment

### Typical Applications

- Hot isothermal forming
- Soil remediation
- Hot forging dies
- Heated platens
- Super plastic forming
- Heated platens (single and multiple zones)
- Heat treating processes
- Super plastic forming with diffusion bonding
- Polysilicon ingots
- Hot gas generation
- Hazardous waste treatment systems

## MULTICELL Heaters

### Applications and Technical Data

#### Definition of Terms

**Cold Toe:** A physical minimum requirement of  $1\frac{5}{8} \pm \frac{5}{16}$  inch

**Independent Zone:** Up to three, separately controlled zones, which can be of varying lengths and wattages

**Heated Length:** The combined sum of all independent zones

**Wattage:** Ratings are the combined sum of all independent zones

### MULTICELL Heaters: The High Temperature Choice

Maximum Allowable Watt Density Single Zone ①

Maximum Allowable Watt Density Three Zone ①

A = 6 cell, 0.935 in. diameter, 240VAC, 3-phase  
 B = 6 cell, 0.685 in. diameter, 240VAC, 3-phase

# High-Temperature Heaters

**EXTENDED  
CAPABILITY**

## Extended Capabilities For High-Temperature (HT) FIREROD® Heaters

The Watlow HT FIREROD heater is especially designed for high temperature platen applications up to 1600°F (871°C). The HT FIREROD heater utilizes the same industry leading design principles used on all Watlow FIREROD products. Advancing the FIREROD heater enables it to withstand application temperatures up to 400°F (204°C) higher than standard cartridge heaters. HT FIREROD design features, which are important in high temperature applications, include:

- A specially constructed end seal that is virtually airtight to reduce the effects of resistance wire oxidation
- A high-temperature sheath that is treated to improve its emissivity for better heat transfer

### Performance Capabilities

- Platen temperatures up to 1600°F (871°C)
- Maximum watt density up to 100 W/in<sup>2</sup> (15.5 W/cm<sup>2</sup>)
- Maximum voltage up to 277VAC ground
- Length tolerance of +0, -4 percent standard diameters; +0, -8 percent for special diameter

### Made-to-Order Availability

Nominal Diameter in.	Actual Diameter in.	Max. Amperes
1/2	0.496 ± 0.004	10
5/8	0.580 ± 0.004	23
	0.621 ± 0.004	23
3/4	0.710 ± 0.004	46
	0.746 ± 0.004	46
1	0.960 ± 0.004	46
	0.996 ± 0.006	46

Contact your Watlow representative for special diameter requests.

### Features and Benefits

#### High-temperature seal

- Reduces exposure to the atmosphere, which minimizes oxidation of the winding wires resulting in longer element life

**Note:** The first 2 in. (51 mm) must be outside of the platen in free air and less than 1000°F (538°C).

\* First 2 in. (51 mm) at lead end must be kept below 1000°F (538°C).

#### Alloy 800 sheath

- Transfers heat more efficiently

#### High emissivity sheath

- Provides better heat transfer and longer life

**For detailed product and technical data, see the full High-Temperature FIREROD product section located on pages 36 through 37.**

# High-Temperature Heaters

## High-Temperature Tubular Heaters

Watlow manufactures high-temperature tubular heaters to bridge the gap between standard tubular heaters and Watlow MULTICELL™ heaters. This tubular is well suited for process air heating applications in excess of 1300°F (704°C), resulting in a maximum sheath temperature of 1800°F (983°C). Controlled lab testing between the new design and current tubular designs show an increase in life of approximately 50 percent.

The high-temperature tubular consists of an engineered tubing with an outer sheath of alloy 600 and a special internal construction. The outer sheath offers high temperature capabilities, reduced oxidation as well as corrosion resistance.

The tubular offering is available in 0.430 and 0.375 inch diameters that are configurable either as formed tubulars or process heaters. The heaters can also be welded to flanges and plates for mounting purposes. Maximum sheath length available is 275 inches for the 0.430 inch and 0.375 inch diameters. The factory should be contacted for longer sheath lengths.

### Features and Benefits

#### Alloy 600 sheath material and a special internal construction

- Assures high temperature performance and corrosion protection in tough applications

#### 0.430 inch diameters\*

- Allows heater to be configured to existing tubular designs that may be experiencing short life

**\*Note: 0.375 diameters are available in Watlow's extended capabilities, contact your Watlow representative for details.**

#### Dual-ended termination

- Installs into flanges and screw plugs similarly to standard product configurations

#### Bendable in standard formations

- Makes the heater easy to apply in a wide variety of applications

### Typical Applications

- High temperature ovens and furnaces
- Radiant heating
- Drying
- Environmental—VOC abatement
- Process air heating: duct heaters, circulation heaters
- Vacuum applications
- Flue gas cleaning (desulphurization)
- Fluidized beds

**For detailed product and technical data,  
see the full High-Temperature Tubular product  
section located on pages 87 through 88.**

# High-Temperature Heaters

## Ceramic Fiber Heaters

Ceramic fiber heaters offer some of the highest temperature heating element capabilities available in the Watlow family of heaters. Heating units constructed of ceramic fiber insulation isolate the heating chamber from the outside. Ceramic fiber heaters are extremely low mass, high insulation value units with self-supported heating elements. Many applications can benefit from the convenience of the heating element and insulation combined into one package. Its lightweight, low-density properties are ideally suited for high temperature applications requiring low thermal mass.

### Performance Capabilities

- Operating temperatures up to 2200°F (1204°C)
- Watt densities from 5 up to 30 W/in<sup>2</sup> (0.8 to 4.6 W/cm<sup>2</sup>)
- Uses “radiant” heat transfer exclusively

### Features and Benefits

#### High temperature ICA resistance elements

- Bounds integrally into required position
- Allows five element configurations

#### Lightweight, low-density alumina-silica composition molded into shape

- Acts as insulation to isolate the heating chamber from the outside
- Provides low shrinkage fiber and inorganic binder
- Ensures a firm, thermal shock resistant, self-supporting unit at all operating temperatures

#### Operating temperatures up to 2200°F (1204°C)

- Provides high temperature performance that is not possible with many other heater types (See page 436 for detailed limits)

#### Low mass ceramic fiber insulation of 10 to 15 lb/ft<sup>3</sup> (160 to 240 kg/m<sup>3</sup>)

- Allows the heater to reach process temperature quickly
- Allows the energy to heat the load instead of wasting energy on itself

#### Works directly off of common power line voltages

- Eliminates the need for expensive transformers or complex power control systems
- Enables compatibility with the full range of Watlow temperature controllers and power switching devices

### Typical Applications

- High temperature furnaces
- Metal melting, holding and transfer
- Semiconductor processing
- Glass, ceramic and wire processing
- Analytical instrumentation

## Ceramic Fiber Heaters

### Options

#### Embedded Sinuated Elements

Flat Sinuated

V-Sinuated

#### Exposed Sinuated Elements

Flat Sinuated

V-Sinuated

- Available in either flat or V-sinuated element configurations
- Advanced V-sinuated element configuration allows up to 27 percent additional watt density over embedded flat sinuated elements
- Performs best at medium to high temperatures at medium watt density power requirements
- Use in partially enclosed to fully enclosed applications
- Especially well suited for large, flat units; semi-cylindrical units above 5 in. (125 mm) I.D.; and full cylinders above 4 in. (100 mm) I.D.
- Offers greater effective insulation thickness than coiled element designs
- Enhances “heated insulation” concept of operational use
- Features high emissivity coating on new high watt density series units. When ordering, refer to charts on pages 452 to 454.

- Available in either flat or V-sinuated element configurations
- Advanced V-sinuated element configuration allows up to 20 percent additional watt density compared to exposed flat sinuated elements
- Offers the lowest possible wire-to-chamber temperature difference for maximum heater life
- Provides optimum heat-up/cool-down and recovery times as well as maximum operational efficiency
- Higher current handling capabilities are possible
- Minimizes the number of circuits and connections in large furnaces
- Especially well suited for large, flat surface area units and large I.D. curved units
- Exposed elements are available on special order as a variation of the embedded sinuated element normally provided on stock and standard units. When ordering, refer to charts on pages 452 to 454.

# High-Temperature Heaters

## Ceramic Fiber Heaters

### Application Hints

#### Applications

- High temperature furnaces
- Metal melting, holding and transfer
- Semiconductor processing
- Glass, ceramic and wire processing
- Analytical instrumentation
- Fluidized beds
- Laboratory and R&D
- Other high temperature process applications
- Optimum performance for high temperature, enclosed furnace chambers
- Coiled elements readily conform to complex curved surfaces, especially small custom chamber shapes
- Coiled element design works best in higher voltage, lower current situations
- Use where lower watt density requirements and low duty cycle operations are expected
- Available in stock and standard units of medium watt density, rated up to 2000°F (1093°C). When ordering, refer to charts on pages 449 to 451.

Embedded Coil Elements

- Never use ceramic fiber heaters for conduction heating applications. These heaters are designed for **radiant heat transfer only**.
- Use appropriate mounting methods including pins, washers, clamping straps, overlapping edge clamps, interlocking edges, etc. Generally, these methods work better than cementing ceramic fiber heaters, as cementing will not accommodate the expansion and contraction caused by thermal cycling of surrounding metal structures.
- Keep furnace loads free of oils, lubricants and other contaminants that can vaporize at high temperatures. Ceramic fiber heaters have a porosity exceeding 90 percent and cannot be sealed against contamination infiltration and possible damage to the heating element wire.

- Use low mass thermocouples that are responsive to rapidly changing radiant energy transfer conditions. Without proper temperature control, ceramic fiber heaters can generate sufficient heat for self destruction.
- Mount a thermocouple junction directly above an element and within  $\frac{1}{16}$  in. (1.6 mm) of the heated surface. Embedded ceramic mounting tubes are available as an option to position 0.125 in. (3.2 mm) diameter thermocouples inside the fiber, directly behind and between the elements. Heater wire operating temperatures are critical and wires should be monitored at the hottest point within the application.
- Electrical connections made in heated portions of the application must be rated for the appropriate currents and anticipate ambient temperatures. To ensure good electrical connections, use compression-type connection devices located as far away from the hottest area of the application. This minimizes the possibility of electrical connection degradation caused by thermal expansion, contraction and high temperature oxidation.
- Ceramic fiber products shrink at high temperatures. During the first 24 hours of operation at temperatures between 1600 and 2200°F (870 to 1204°C), shrinkage of up to 4 percent can occur. Fill all gaps between units created by shrinkage with loose ceramic fiber insulation. Watlow offers a “pre-firing” process that pre-shrinks and dimensionally stabilizes units before shipping. Contact your Watlow representative for further details.
- Use additional back-up insulation for maximum energy efficiency and appropriate safety considerations. Use only insulation with inorganic fibers and binders to avoid corrosive fumes that could damage heater elements.
- Handle all units and leads with care. Ceramic fiber heaters are very resistant to thermal cycling and thermal shock, but are easily subject to mechanical damage from careless handling.
- Repair of minor mechanical damage, made with unapproved or unknown cements, could damage the wire elements at high temperatures. If unsure, contact your Watlow representative before making repairs. Several accessory items are available from the factory for repair purposes.

# High-Temperature Heaters

## Ceramic Fiber Heaters

### Performance Data

#### Performance Capabilities

The *Performance* graph shown below represents capabilities of the five heater element configurations. The curves compare upper temperature limits versus permissible design watt densities to achieve a standard heater life expectancy of 2,000 hours.

As with all Watlow heaters, the major application concern is the heater's surface watt density as it relates to the application temperature, such as with the furnace chamber temperature or the radiant surface temperature. When evaluating an application for temperature and watt density requirements, it should fall to the left of and below the performance limit lines. If the application falls

into this area, then it is in the safe performance area. The further into this safe performance area, the higher the life expectancy of the heater. If an application requires temperatures or watt densities that fall into the area to the right of and above the lines, then the application operates beyond the heater's typical design or performance limits. Using a heater required to perform in this area of the graph may result in a shorter life expectancy. For information specific to an application, contact your Watlow representative.

# High-Temperature Heaters

## Ceramic Fiber Heaters

### Performance Data (Continued)

The following graphs provide technical data to help evaluate performance and select the correct ceramic fiber heater for an application.

The four graphs shown represent performance data for heat-up/cool-down rates and power requirements

to maintain furnace temperature. This data averages test results performed for two typical types of furnace chambers, and should not be used for specification purposes.

### Small, Full Cylinder, Heated Chambers

Test conditions for small, full-cylinder heated chambers are typical of analytical instrumentation furnaces. Several stock sizes are represented. Units tested were 6 in. (150 mm) long, mounted in a vertical orientation. Both ends were capped with 1 in. (25 mm) of ceramic fiber

insulation. No additional insulation or metal sheath was added to the outside diameter. Temperature was measured by a thermocouple located in the geometric center of the chamber.

### Power Requirements

Shown below are percentages of rated power needed to achieve and hold specific temperatures inside the full cylinder chambers tested.

This represents the efficiency of these heaters in this mounting configuration.

# High-Temperature Heaters

## Ceramic Fiber Heaters

### Performance Data (Continued)

#### Medium Sized, Insulated Closed Chambers

Test conditions for medium-sized, insulated chambers are typical of pit and box furnaces, large tube furnaces and pipe and reactor heating. Standard embedded coil units (Watlow part number **VS412A12S**) were used and rated for 2000°F (1093°C). The test chamber size was 12 in. long and 12 in. I.D. (305 X 305 mm). The volume was approximately 0.75 ft<sup>3</sup> (0.02 m<sup>3</sup>).

Temperature heat-up rates were measured by thermocouples in three places: at the element, on the heater surface and at the center-of-chamber. Data for various additional wall thicknesses is also shown. This is typical of how large, flat and semi-cylindrical units are used. The chamber was oriented vertically with top and bottom disks of ceramic fiber insulation equal to wall thickness.

#### Power Requirements

Shown below are the percentages of rated power needed to achieve and hold specific temperatures inside of

medium-sized, insulated chambers. This represents the efficiency of these heaters in this mounting configuration.

# High-Temperature Heaters

## Ceramic Fiber Heaters

### Performance Data (Continued)

#### Insulation Effectiveness

The graphs below illustrate the effectiveness of adding 6 lb/ft<sup>3</sup> (96 kg/m<sup>3</sup>) blanket insulation to the backside of standard 2 in. (50 mm) thick ceramic fiber heaters. Total wall thickness of up to 6 in. (152 mm) is shown. Data is for vertical sides without metal sheathing. Top and bottom surfaces and surfaces with metal sheaths covering ceramic fiber insulation will vary.

#### Heat Loss and Energy Transfer

For general calculations of heat loss and energy transfer, the *Insulation K-Factors* and *Emissivity* graphs are helpful.

The *K-Factors* graph is for ceramic fiber heaters and the ceramic fiber insulation blanket typically used with the heaters. This blanket is offered as an accessory by Watlow.

#### Application Hints

For wall thicknesses (T) in cylindrical situations use the “equivalent thickness” conversion.

$$T_{cyl.} = r_{out} \log_e \left( \frac{r_{out}}{r_{in}} \right)$$

Where  $r_{out}$  is outer radius  
 $r_{in}$  is inner radius

#### Emissivity of Heater Surface

The *Emissivity* graph details the normalized emittance values for the four surfaces most likely to be encountered when planning Watlow ceramic fiber heater applications.

# High-Temperature Heaters

## Ceramic Fiber Heaters

### Termination Options

Watlow offers many variations of electric leads to meet particular wiring requirements. To understand termination options available, it is necessary to understand the various methods for applying electrical leads.

Ceramic fiber heater electrical leads are welded to stubs – the metal parts that interface between the heating element wire and the add-on electrical leads. These stubs exit the heater at the lead pockets. Pockets are small cavities below the cold face plane (outside surface) and usually located at or near the corners.

Watlow ceramic fiber heaters are equipped with either strip leads or double twisted wire leads. Strip leads are most commonly used, unless otherwise specified. The various lead styles refer to the lead's exit orientation relative to the pocket used on a given type of heater. See illustrations for specific details.

### Strip Leads

Flat and semi-cylindrical ceramic fiber heaters are available with the termination options shown here. When ordering termination options for catalog units, the specific strip lead **Style** must be specified. To determine the desired style, refer to the following illustrations. If a style is not specified, **Style A** leads, 12 in. (305 mm) in length will be provided. Additional lengths are available using add-on leads which are priced per pair, per inch, for the three different widths. See ordering charts for which lead width is used on a specific heater. Strip leads are shipped with a  $1\frac{3}{64}$  in. (5 mm) hole at the end of the lead. Use #10-24 screws, nuts and washers, or other wiring connections. Caution should be exercised when making connections. Leads are susceptible to loosening due to thermal expansion and contraction as the heater cycles.

### Important

Inspect the carton and its contents for damage prior to discarding packaging material. If there is any damage, contact your Watlow representative immediately for a Returned Material Authorization (RMA) number. All damaged goods are to be returned in the original packaging to reduce the possibility of further damage to the product.

### Flat Units

### Semi-Cylindrical Units

# High-Temperature Heaters

## Ceramic Fiber Heaters

### Termination Options (Continued)

#### Special Lead Orientation

If the various standard strip lead orientations and pocket configurations are not suitable, special designs are available. When ordering, please include drawings that show proposed locations.

#### Leads Bent 90 Degrees

The double twisted leads of full cylinder heaters can bend 90 degrees to lay into slots and exit to the sides of the unit.

#### Special Add-On Lead Configurations

The two options illustrated can be welded onto the stub at the heater pocket, or for a better installation, welded to the end of a specified length of the regular strip lead. The strip lead length can vary from zero to the value necessary to distance it from the hot zone. The length of the add-on lead option eliminates the need for a custom product and satisfies a greater range of wiring requirements. Contact your Watlow representative for technical details and price.

## Accessories

Ceramic fiber heater orders can include the accessory items described in this section. Please specify the Watlow part number when ordering.

#### Rigidizer

Rigidizer is primarily used to recoat soft, cut edges of ceramic fiber heaters and ceramic fiber insulation panels. Various degrees of hardening can be achieved with additional applications. Rigidizer can be ordered by the pint (0.47 L) by specifying part number **CFRGDPT** or gallon (3.78 L), part number **CFRGDGAL**.

#### B.T.E. Closed-End Thermocouple Tubes

A horizontal thermocouple tube between the elements is available in two sizes: 0.140 in. (3.6 mm) and 0.265 in. (6.7 mm), both 6 in. (152 mm) long with closed end.

#### Black Surface Coat

Black high emissivity coating is used to raise emissivity closer to 1.0. The container size is 4 ounces. Order **CFBSC**.

## Ceramic Tubes

Ceramic tubes are available in four nominal sizes: 1/8, 1/4, 3/8 and 1/2 in. (3.2, 6, 9.5 and 13 mm) I.D. and lengths including 0.9 in. (22 mm) and 1.9 in. (48 mm) long. Ceramic tubes have several uses, including thermocouple mounting holes, mounting pin sleeves and lead coverings. The table below lists part numbers and exact sizes.

Inside Diameter		Length		Part Number
in.	(mm)	in.	(mm)	
0.140	(3.6)	0.90	(22)	<b>CC405-1</b>
0.265	(6.7)	0.90	(22)	<b>CC405-2</b>
0.390	(9.9)	0.74	(19)	<b>CC405-3</b>
0.515	(13.1)	0.90	(22)	<b>CC405-9</b>
0.140	(3.6)	1.90	(48)	<b>CC405-4</b>
0.265	(6.7)	1.90	(48)	<b>CC405-5</b>
0.390	(9.9)	1.60	(41)	<b>CC405-6</b>
0.515	(13.1)	1.90	(48)	<b>CC405-8</b>

# High-Temperature Heaters

## Ceramic Fiber Heaters

### Accessories (Continued)

#### Dry Heating Surface Mix

Dry heating surface mix is used to make the hot face of all heaters, including those with the high emissivity coating. It can also be used with rigidizer to make a very high temperature paste for touch ups of the hot face area. Order by the pint (0.47 L), part number **CFHTGSURMX**, or gallon (3.78 L), part number **CFHTGMXGAL**.

#### Patch Kit

To easily repair small breaks or cracks, the patch kit contains one pint (0.47 L) of powdered ceramic fiber and four ounces (0.118 L) of black surface coat. Order **CFPATCHKIT**.

#### Ceramic Fiber Insulation Blanket

Additional insulation value for ceramic fiber heaters is available with ceramic fiber insulation blanket. This 6 lb/ft<sup>3</sup> (96 kg/m<sup>3</sup>) ceramic fiber blanket contains no organic binders. It is suitable for applications up to 2300°F (1260°C) and sold in full rolls or cut by the square foot. These blankets are available in the following sizes:

Size (U.S.)	Size (metric)	Part No.
24 in. X 25 ft X 1/4 in.	610 mm X 7.6 m X 6 mm	<b>CFBLKT1/4</b> <sup>①</sup>
24 in. X 25 ft X 1/2 in.	610 mm X 7.6 m X 13 mm	<b>CFBLKT1/2</b> <sup>①</sup>
24 in. X 25 ft X 1 in.	610 mm X 7.6 m X 25 mm	<b>CFBLKT-1</b> <sup>①</sup>

<sup>①</sup> Add ...R to end of part number for full roll.

#### Powdered Ceramic Fiber

Powdered ceramic fiber is used primarily to improve surface finish in critical areas. It can also be used to fill voids, cracks and broken corners in damaged units. Use powdered ceramic fiber with rigidizer to make an easy to apply paste. A standard container size is one pint (0.47 L). Order part number **CFPDRFPT**.

#### High Temperature Coating and Electrical Potting Cement

Two different high purity, high temperature cements can be used to mount thermocouple tubes, provide extra surface hardening, bond ceramic fiber gaskets and affix lightweight ceramic fiber insulation blanket to panels, as well as attach edge-spacer blocks and custom vestibules. Potting cement is packaged in a 1/4 pint (116 mL) jar, and may be ordered by specifying part number **CFPTGCMT**. The high temperature coating cement is available in pints or gallons, and can be ordered by using part numbers **CFCTGCMTPT** and **CFCTGCMTGAL**.

#### Strip Lead Porcelain Bushings

Strip lead porcelain bushings are primarily used to protect heater power leads when passing through metal walls and furnace structures. Bushings are available with inside diameters listed below for use with double twisted leads and the three standard strip lead widths. To select the appropriate inside diameter lead bushing, reference the heater selection tables on pages 449 through 454. The strip lead width for each heater is listed therein.

# High-Temperature Heaters

## Ceramic Fiber Heaters

### Mounting Methods

The Watlow ceramic fiber heater is available in a wide range of heater shapes and configurations to solve high temperature process applications. The modularity and range of sizes and wattages provide the greatest possible flexibility. Watlow has developed and can recommend many appropriate specific and generalized mounting systems for mounting heaters. Ceramic fiber heaters have been organized into seven major mounting categories or heater system configurations as shown in the following illustrations.

#### 1. Full Cylinder Heaters

#### 2. Semi-Cylindrical (180° section) Heaters

#### 3. Arc-Section Arrays of Heaters (3 or more units of 120° or less each)

#### 4. Flat Panels, with One Panel on Each Side

#### 5. Flat Wall Array with Minimum Two-by-Two Units per Wall

#### 6. Made-to-Order Molded Shapes with up to Five Sides of a Box Molded as One Piece, Including Complex Curves

# High-Temperature Heaters

## Ceramic Fiber Heaters

### Molded Ceramic Fiber Insulation Modules

For heating applications requiring insulation panels, Watlow offers many shapes and sizes of molded ceramic fiber insulation modules. These insulation modules are constructed using the same high quality, high temperature, low mass ceramic fiber material used in our heaters.

As a complement to the overall product line, these modules offer additional solutions for high temperature industrial insulation problems. Without heating elements, molded ceramic fiber insulation modules are available in complex shapes to conform to application requirements.

Molded-to-shape insulation modules also make handling and installation easier compared to other insulation methods. Since they are molded to shape, sanding, cutting and grinding of blocks to achieve the desired configuration is not required.

Highly resistant to thermal shock and chemical attack, except for hydrofluoric and phosphoric acids and strong alkalis, insulation modules are unaffected by oil and water. If the insulation becomes wet, physical and thermal properties can be fully restored when dried.

**Note:** If using molded ceramic fiber insulation modules along with other Watlow ceramic fiber heaters, oil, water and other contaminants will negatively affect the heating element portion of the ceramic fiber heater.

Molded insulation modules are rated for up to 2300°F (1260°C) continuous duty. The inorganic binder eliminates smoke or combustion during initial heating to 300°F (150°C) and higher. Vacuum molded density is 10 to 15 lbs/ft<sup>3</sup> (160 to 240 kg/m<sup>3</sup>), the same as the ceramic fiber heaters.

**Size Limits:** Maximum flat size is 34 x 52 in. (860 x 1320 mm) with a molded thickness of more than 4 in. (102 mm). Maximum inside diameter for semi-cylindrical modules is 24 in. (610 mm). For applications requiring curved insulation pieces in excess of 180 degrees, consider using multiple arc-section modules or an array system of multiple flat units.

### Application and Technical Data

The same insulation performance and technical data for ceramic fiber heaters applies to molded ceramic fiber insulation modules. For specific information on insulation performance properties, see the *Heat Loss and Energy Transfer* portion of the ceramic fiber heaters section on page 439.

### Accessories

Where appropriate, many of the same accessories available for ceramic fiber heaters are available for use with molded ceramic fiber insulation modules. Accessories can be used to modify, provide mounting options and for minor repairs and maintenance.

### Ordering Information

Molded ceramic fiber insulation modules are available in exactly the same sizes and shapes as the ceramic fiber heaters listed in the ordering tables. In general, the ordering part numbers are derived by replacing the second alpha character in the heater part number (i.e., F, S, C, R, etc.) with **N** to designate **no-element**.

**Extended Capabilities:** Watlow representatives can work with your customers to design and manufacture modules to meet specific insulation needs.

### Modifications

It is possible to order certain special modifications for catalog units prior to shipment. Some of these are listed below, with a brief description.

**Beveled and trimmed edges:** The unheated edges of Type 6, 7 and 8 units can be factory modified to provide in-between overall sizes, and can be angle cut to form regular polygon shapes around objects. Angles between zero degrees and 45 degrees can be accommodated.

**Black surface coating:** Improves the emissivity of the heater's hotface. See the graph on page 439 for emissivity values, contact the factory for pricing adders.

**Leads:** See page 441 for other "Special Add-On Lead" configurations.

**Thermocouple holes:** Ceramic tubes on page 441 are used to make electrically isolated holes through heaters. To order, the inside **diameter** and **location** must be specified. A special "behind-the-element" horizontal thermocouple tube is available to very closely track element temperature for over-temperature protection and improved heater life.

### Notches or long slots in no-heat areas of

**units:** Rectangular and semi-circular notches can be cut into no-heat areas and vestibules on most units. Usually, a sketch or drawing that specifies exact location must be included with your order. Fax numbers to send drawings to are available.

**Shortened vestibule lengths:** Modified vestibule lengths require retention of at least 1/2 in. (13 mm) of insulation for adequate strength or complete removal ("0" length) to make Type 1 units into left vestibule (i.e., Type 2) or right vestibule (i.e., Type 3) units.

---

### Lead Times

**RAPID SHIP:** Same or next working day shipment is subject to current inventory (contact your Watlow representative for latest status). No set up charges. Orders must be placed before 11:00 a.m. CST/CDT, USA.

**RAPID SHIP with modifications:** Two-to-three working days shipment. Nominal set up charges only for specific modifications, not for the basic heater.

**Standard delivery:** Shipment is usually within three weeks. Check with the factory for the latest lead time status. No set up charges.

### Warning

This product contains refractory ceramic fibers (RCF) which have been identified by the International Agency for Research on Cancer (IARC) as a possible human carcinogen (class 2B). Before using these products, read the material data safety sheet (MSDS) which includes the detailed precautionary measures and handling instructions.

**RAPID SHIP**

- RS - Next day shipment up to 2 pieces for orders with part number configuration -0000R or 0001R.
- All modifications to RAPID SHIP are manufacturing lead times.

① Units with part numbers ending in ...**OA**, watt densities between 10.6 to 14.2 W/in² (1.6 to 2.2 W/cm²), are coil designs suitable for use up to 2000°F (1093°C) maximum surface temperature. Units with part numbers ending in ...**T**, watt densities between 14.6 to 17.2 W/in² (2.3 to 2.7 W/cm²) are "round radiants" with sinuated element designs and high emissivity coating that are suitable for use up to 1800°F (982°C) maximum surface temperature.

② For unheated insulation tubes, substitute "**VN**" for "**VC**" in the part number of the appropriate size unit. No heats are manufacturing lead times.

**RAPID SHIP**

- **RS** - Next day shipment up to 2 pieces for orders with part number configuration -0001R.

• All modifications to RAPID SHIP are manufacturing lead times.

- **M** - Manufacturing lead times

All units in this table are suitable for use up to 2000°F (1093°C) maximum surface temperature.

① Add Type number (Type 5 - 8) in the blank position in the part number. Example: **VS704A06S**. For unheated units, see catalog page 444.

② These units have dual elements to use in "parallel" for 240V usage. Alternate designs are available for 480V, 277V and three-phase (internally wired). Contact your Watlow representative.

## RAPID SHIP

- **RS** - Next day shipment up to 2 pieces for orders with part number configuration -0001R.
- All modifications to RAPID SHIP are manufacturing lead times.
- **M** - Manufacturing lead times

All units have 2 ±1/4 inch thick walls.

All units in this table are suitable for use up to 2000°F (1093°C) maximum surface temperature.

- ① Add Type number (Type 1 - 4) in the blank position in the part number. Example: **VS102A06S**. For unheated units, see catalog page 444.

Overall length applies only to the full vestibule (Type 1) units. Types 2 and 3 are shorter by one vestibule length. Type 4 length equals (B).

Type 2 (left vestibule) and Type 3 (right vestibule) style units are not stocked. They are, however, still standard units and designs are kept on file.

- ② These units have dual elements to use in "parallel" for 240V usage. Alternate designs are available for 480V, 277V and three-phase (internally wired). Contact your Watlow representative.

### RAPID SHIP

- **RS** - Next day shipment up to 2 pieces for orders with part number configuration -0001R.
- All modifications to RAPID SHIP are manufacturing lead times.
- **M** - Manufacturing lead times

All units in this table have 2 ±1/4 inch thick walls.

All units in this table are suitable for use up to 2000°F (1093°C) maximum surface temperature.

- ① Add Type number (Type 1 - 4) in the blank position in the part number. Example: **VS<sub>1</sub>10A06S**. For unheated units, see catalog page 444.

Overall length applies only to the full vestibule (Type 1) Units. Types 2 and 3 are shorter by one vestibule length. Type 4 length equals (B).

Type 2 (left vestibule) and Type 3 (right vestibule) style units are not stocked. They are, however, still standard units and designs are kept on file.

- ② These units have dual elements to use in "parallel" for 240V usage. Alternate designs are available for 480V, 277V and three-phase (internally wired). Contact your Watlow representative.

# High-Temperature Heaters

## Ceramic Fiber Heaters

All units: T =  
2 ± 1/4 inches  
(51 ± 6 mm)

**Type 5**  
Fully Heated  
(Style A Leads Illustrated)  
(Default Lead Style)

**Type 6**  
Insulated Sides  
(Style B Leads Illustrated)

**Type 7**  
Insulated Ends  
(Style C Leads Illustrated)

**Type 8**  
Insulated All Edges  
(Style C Leads Illustrated)

(Style A, B or C leads available on any type unit. Please specify.)

• M - Manufacturing lead times

All units in this table are suitable for use up to 1800°F (982°C) maximum surface temperature.

① Add Type number (Type 5 - 8) in the blank position in the part number. Example: VF<sup>0</sup>06A12T. For unheated units, see catalog page 444.

Sinuated wire, high watt density units are provided with embedded sinuated elements and high emissivity coating unless exposed sinuated is specified when manufactured. (These are not stocked.) Contact your Watlow representative.

② These units have dual elements to use in "parallel" for 240V usage. Alternate designs are available for 480V, 277V and three-phase (internally wired). Contact your Watlow representative.

• M - Manufacturing lead times

All units in this table have 2 ±1/4 inch thick walls.

All units in this table are suitable for use up to 1800°F (982°C) maximum surface temperature.

① Add Type number (Type 1 through 4) in the blank position in the part number. Example **VS106J06T**. For unheated units, see catalog page 444.

Sinuated wire, high watt density units are provided with embedded sinuated elements and high emissivity coating unless exposed sinuated is specified when manufactured. (These are not stocked.) Contact your Watlow representative.

Overall length applies only to the full vestibule (Type 1) units. Types 2 and 3 are shorter by one Vestibule length. Type 4 length equals (B).

Type 2 (left vestibule) and Type 3 (right vestibule) style units are not stocked. They are, however, still standard units and designs are kept on file.

② These units have dual elements to use in "parallel" for 240V usage. Alternate designs are available for 480V, 277V and three-phase (internally wired). Contact your Watlow representative.

#### Notes:

- If the order is placed before 11:00 AM CST, heaters with standard leads (...1R or ...2R) ship the same day. Heaters with non-standard leads ship the next day.
- The BTE (between-the-element) is NOT covered in this system yet. Please contact your Watlow representative for availability.

## Ceramic Fiber Heaters

### How to Order

#### Made-to-Order Units

#### Ordering Information

**Quantity:** When ordering, specify quantity of units desired. Semi-cylindrical units are sold as “each half.” Two halves to make a pair are usually required. Please include the number of desired spares or extras in the total quantity.

**Part number:** Use the part number if an exact re-order of a previously designed made-to-order unit is needed. Please reconfirm volts and watts, lead orientation and length. Most heaters allow selection of several stock modifications (see page 446) and termination options (see pages 440 and 441).

**Dimensions for made-to-order units:** Include a drawing if possible. Specify the heated area, width and length, overall width/length, thickness, electrical ratings, etc.

**Wattage:** 6.5 to 25 W/in<sup>2</sup> (1.0 - 3.9 W/cm<sup>2</sup>) on the heating surface is the recommended watt density range for operation in the 1500 to 2200°F (815 - 1204°C) range. (Note: At the higher temperatures, lower watt densities must be employed.) Please provide operating temperatures and conditions. Contact your Watlow representative for higher watt densities at other temperatures. Generally, for higher operating temperature limits, lower watt densities must be used.

**Voltage:** 60, 120 and 240VAC are offered on units. However, up to 600 volts is possible with extended capabilities. Internally connected three-lead, three-phase units are also available on made-to-order units (these are normally internally wye-connected). Contact your Watlow representative on special voltage requirements.

**Leads:** Lead length and orientation (i.e. **Style A, B or C**). Lead **Style A**, 12 in. (305 mm) long.

**Shipping weight:** The product listing tables show net weights per unit. To estimate gross shipping weight, add 30 percent to the total. Additional shipping/packaging charges may be incurred for certain large orders. Due to the light weight but large size of these heaters, dimensional box weighting may occur on expedited air shipments.

#### Ordering Hints

Ordering ceramic fiber heaters is easy. However, it is very important to pay attention to part numbers and special modifications details.

- Always fill in the “...\_...” (blank) code position with the correct Type number (see illustrations above the charts).
- Always provide the correct Lead Style letter. (See suggested illustrations above the charts, but Style A-12 will be the default lead if not otherwise specified.)
- Supply a drawing or sketch whenever possible to eliminate confusion.
- When ordering Type 6, 7, 8 units, be certain of the heated area and no-heat area orientations desired.
- When planning to order Type 2 and/or Type 3 units (left or right vestibule), there are three options to consider—two of which could be used on the Type 1 items:
  1. Order the appropriate full vestibule unit. The customer can carefully remove the unneeded vestibule.
  2. Order the full vestibule unit. Prior to shipping Watlow will remove the unneeded vestibule as a stock modification. There is a small additional charge for this.
  3. Special order the desired Type 2 or 3 unit. This requires extended manufacturing of the heater and increases delivery time, but will minimize costs.

## ULTRAMIC® Advanced Ceramic Heaters

Watlow's high performance ULTRAMIC® advanced ceramic heaters are designed for thermal applications that require optimal effectiveness of equipment and processes.

Constructed with aluminum nitride (AlN), ULTRAMIC heaters' thermally matched proprietary heating element provides maximum performance in challenging applications. AlN is especially suitable for applications that require a clean, non-contaminating heat source. Its excellent geometric stability ensures consistent part-to-part thermal contact during heating cycles.

Watlow AlN heaters operate up to 400°C (752°F)<sup>①</sup> with an ultra-fast ramp rate of up to 150°C (270°F) per second depending on the application, heater design and process parameters. In addition to its excellent thermal characteristics, the ULTRAMIC provides high electrical isolation and typically provides superior chemical resistance compared to traditional metal heaters.

### Performance Capabilities

- Standard operating temperature up to 400°C (752°F)<sup>①</sup>
- Watt densities up to 155 W/cm<sup>2</sup> (1000 W/in<sup>2</sup>)
- Temperature ramp rate up to 150°C (270°F) per second (depending on application parameters)

### Features and Benefits

#### Robust AlN ceramic

- Creates a homogeneous assembly for atmospheric and vacuum applications
- Provides durable heater construction and thermal transfer necessary for high temperature and long heater life
- Supports the design of a high watt density, fast responding heater in a very small package
- Ensures geometric stability due to low coefficient of thermal expansion

#### Superior electrical performance

- Assures low leakage current
- Enables high breakdown voltage

<sup>①</sup> 400°C (752°F) operating temperature is standard. High temperature terminations between 400 and 600°C (752 and 1112°F) are available as an extended capability. Contact your Watlow representative for information.

#### High thermal conductivity

- Makes for an ultra-fast temperature ramp rate of up to 150°C (270°F) per second (depending on application parameters)
- Allows for quick cool-down
- Provides extremely uniform temperatures over the heater's surface

#### Type K thermocouple integrated into assembly

- Ensures reliable heater/sensor interface
- Improves accuracy with optimized temperature sensing
- Provides ramping applications with a high response rate

#### UL® and CE agency compliance

- Meets global safety standards
- Includes RoHS compliance

#### Typical Applications

- Wire and die bonding
- Integrated circuit (IC) chip testing
- Mass spectrometry
- Medical devices
- Plastic welding/sealing
- Respiratory therapy equipment

## ULTRAMIC Advanced Ceramic Heaters

### Technical Data

#### Mounting Guidelines

- Temperature <math><200^{\circ}\text{C}</math> (<math>392^{\circ}\text{F}</math>): bond with high-temperature epoxy adhesive
- Clamp using single or multiple-point fasteners

#### Optional Thermocouple

- Bonded Type K thermocouple for <math><400^{\circ}\text{C}</math> (<math>752^{\circ}\text{F}</math>)

#### Specifications and Tolerances

##### Surface Finish

- Flatness: <math><0.05\text{ mm}</math> (0.002 in.)
- Parallelism: <math><0.05\text{ mm}</math> (0.002 in.)
- Surface roughness (Ra): <math><1.5\text{ }\mu\text{m}</math>

##### Electrical Properties

- TCR: <math>0.0015/^{\circ}\text{C}</math>
- Resistance tolerance:  $\pm 25\%$

##### Intellectual Property

- U.S. Patents 7,696,455 and 7,832,616

#### Lead Wire and Terminations

- Power terminals exit locations — extended from side edge or top face
- PTFE insulated silver-plated copper lead extension
- Lead extension length — standard length 305 mm (12 in.)
- Optional length of ceramic beads

Side Lead Exit

Top Lead Exit

## Extended Capabilities For ULTRAMIC Advanced Ceramic Heaters

### Features and Benefits

#### Rapid prototyping with finite element analysis (FEA)

- Provides rapid “virtual prototyping” of heater performance prior to the manufacturing process
- Allows custom prototype delivery in weeks rather than months with innovative design and manufacturing practices

#### Mounting Guidelines<sup>①</sup>

- In addition to the options listed on the previous page, a screw hole can be provided on custom designs (recommend insulation buffer such as mica spacer)

#### Optional Sensors

- In addition to, or in place of the standard bonded thermocouple, a drilled hole or slot can be provided for installing an externally mounted sensor

See page 460 for lead exit details (full drawings and current list of standard designs available at [www.watlow.com/ultramic](http://www.watlow.com/ultramic))

#### Configurations include:

- Power lead wires with 305 mm (12 in.) of PTFE insulation
- Bonded Type K thermocouple with 305 mm (12 in.) PTFE insulated lead wires

**Note:** Maximum temperature is 400°C (752°F). Lead wires are rated to 205°C (401°F).

If ceramic beads are required, please contact your Watlow representative for a quote.

# Specialty Heaters

## Thick Film Conduction Heaters

The Watlow 430 stainless steel thick film conduction heater is ideal for many applications where fast response and uniformity are essential. A clamp-on, thick film heater provides the best possible combination of heat transfer, thermal efficiency, temperature response and uniformity in a low profile package.

This high-performance heater can be used in areas where space is limited or where conventional heaters cannot be used due to limited voltage and wattage combinations.

Thick film conduction heaters provide a low profile in a variety of shapes including two-dimensional circular and rectangular forms. Direct contact of thick film heaters to surfaces ensures efficient heat transfer through thermally stable substrates and precise resistance trace patterns.

### Performance Capabilities

- Maximum substrate temperature up to 1022°F (550°C). Contact your Watlow representative for applications over 842°F (450°C)
- Watt densities up to 75 W/in<sup>2</sup> (11.6 W/cm<sup>2</sup>)
- Voltages up to 240V

### Features and Benefits

#### Watt densities up to 75 W/in<sup>2</sup> (11.6 W/cm<sup>2</sup>) for clamp-on applications

- Allows precise, repeatable wattage distribution and uniform temperature profile

#### Threaded stud termination

- Produces strong, trouble-free connections, see *Termination Assembly* drawing on page 464

#### Agency approvals

- UL® component recognition available upon request

### Typical Applications

- Food warming cabinets
- Load dump resistors
- Seal bars
- Deposition chamber lids

# Specialty Heaters

## Thick Film Conduction Heaters

### Technical Information

#### Specifications

**Min. Length:** 2.25 in. (57 mm)

**Max. Length:** 24 in. (610 mm)

**Max. Voltage:** 240VAC

**Max. Amperage:** 25A

**Terminations:** Stud terminals

**Substrate:** 14 ga. typical

**Features:** Holes/slots up to 15% of area

#### Termination Assembly

To install, mount the heater to the surface being heated and assemble mounting hardware. Standard measurements of assembly hardware are illustrated in the *Termination Assembly* drawing above. Please refer to the *Installation and Maintenance Manual* (316-42-32-1) that is supplied with the heater for proper mounting instructions.

#### Construction

Thick film conduction heaters, designed for clamp-on applications, are supplied as a multi-part assembly: heater, mica insulator, clamping plate and mounting hardware.

The mica insulator acts as a thermal barrier to effectively force heat into the part being heated and as an additional protective layer for the heater.

The clamping plate distributes pressure evenly across the entire surface of the heater to promote close contact between the thick film heater and the part to be heated.

The mounting hardware is designed to effectively clamp to the part requiring heat, based on the heater size.

## Extended Capabilities For Thick Film Conduction Heaters

### Technical Information

#### Specifications

**Min. Length:** 2.25 in. (57 mm)

**Max. Length:** 24 in. (610 mm)

**Max. Voltage:** 240VAC

**Max. Amperage:** 25A

**Terminations:** Stud terminals  
Soldered leads 480°F (250°C)  
Rubber molded flexible leads 480°F (250°C)

**Substrate:** 10 to 18 ga. 430 SS, Alumina

**Features:** Holes/slots up to 15% of area

**Sensor:** Bolted ring-style thermocouple

<sup>①</sup>Wattage output at 77°F (25°C).

<sup>②</sup>Includes clamping plate, mica insulator and mounting hardware. Replace the last letter of the part number with "O" for heater only.

<sup>③</sup>Delivery 1 to 3 working days

# Specialty Heaters

## Coil/Cable Heaters

The versatile Watlow coil/cable heater can be formed into a variety of shapes. Small diameter, high performing cable heaters are fully annealed and readily bent to a multitude of configurations.

The heater can be formed into a compact, coiled nozzle heater supplying a full 360 degrees of heat with optional distributed wattage. A straight cable heater can snake through an equipment application. Flat, spiral configurations can be used in high-tech manufacturing while a star wound cable can be used for air and gas heating.

Different applications require different construction methods, including one, two or four resistance wires; parallel coil or straight wire; drawn or swaged sheaths; with or without internal thermocouples; leads exiting from one or both ends, and round, rectangular or square cable cross sectionals.

Whatever the application requirement, a Watlow coil/cable heater can be shaped to fit.

### Performance Capabilities

- Continuous operating temperatures up to 1200°F (650°C) with intermittent operating periods achieving up to 1500°F (815°C) dependent on the type of element wire used
- Sheath watt densities on the cable up to 30 W/in<sup>2</sup> (4.65 W/cm<sup>2</sup>), and as high as 75 W/in<sup>2</sup> (11.62 W/cm<sup>2</sup>) subject to factory approval
- Maximum voltage up to 240V

### Features and Benefits

#### High ductility

- Allows the heater to be cold-formed into almost any shape

#### Low mass

- Allows quick response in both heating and cooling

#### Constructed with no open seams

- Capable of operating in unusual environments, including cryogenic and sub-freezing temperatures, high vacuum, gaseous and liquid immersion heaters

- Decreases opportunity for corrosion

#### Constructed of standard 304 stainless steel, optional 316 stainless steel or alloy 600

- Provides high temperature corrosion and oxidation resistance along with ideal expansion properties

#### Heater sheath can be brazed

- Allows the permanent attachment of mounted fittings to the heater, contact your Watlow representative

**Sizes range from 0.040 in. (1.02 mm) to 0.188 in. (4.8 mm) diameter**

- Delivers a high volume of heat into a tiny space

#### Internal construction options

- Allows for internal thermocouples and no-heat sections (not available in all sizes)

# Specialty Heaters

## Coil/Cable Heaters

### Typical Applications

- Plastic injection molding nozzles
- Semiconductor manufacturing and wafer processing
- Hot metal forming dies and punches
- Sealing and cutting bars
- Medical, analytical and scientific instruments
- Restaurant and food processing equipment
- Cast-in heaters
- Laminating and printing presses
- Air heating
- Textile manufacturing
- Heating in a vacuum environment

### Electrical Data and Coiling Limits

Sheath Diameter		Max. Voltage	Surface Area Per Linear Foot		Min. Bend Radius		Min. Coiled Inside Diameter	
in.	(mm)		in.	(cm)	in.	(mm)	in.	(mm)
0.040 ± 0.002	(1.016 ± 0.051)	48	1.51	(9.740)	1/16	(1.6)	1/8	(3.2)
0.062 ± 0.002	(1.575 ± 0.051)	120	2.34	(15.098)	1/8	(3.2)	1/4	(6.0)

0.102 square ± 0.003	(2.591 ± 0.076)	240	4.90	(31.615)	1/4	(6.0)	1/2	(13.0)
0.102 ± 0.003 x 0.156 ± 0.005 rectangular	(2.591 ± 0.076) x (3.962 ± 0.127)	240	6.19	(39.938)	1/4	(6.0)	1/2	(13.0)
0.125 ± 0.003	(3.175 ± 0.076)	240	4.71	(30.389)	1/4	(6.0)	1/2	(13.0)
0.157 ± 0.004	(3.988 ± 0.102)	240	5.92	(38.196)	5/16	(7.9)	5/8	(15.9)
0.188 + 0.003 - 0.006	(4.775 + 0.076 - 0.152)	240	7.09	(45.745)	3/8	(9.5)	3/4	(19.0)
0.128 square ± 0.003	(3.251 ± 0.076)	240	6.31	(40.712)	1/4	(6.0)	1/2	(13.0)

In most cases 30 W/in<sup>2</sup> (4.65 W/cm<sup>2</sup>) is the safe allowable limit for cable watt density. Please contact your Watlow representative prior to ordering >30 W/in<sup>2</sup> cables.

### Resistance/Wattage Tolerance ±10%.

Cable heaters can run on both ac and dc. Contact your Watlow representative for amperage limitations.

### Coiling Tolerances

Cable Diameters	Coiled Width Tolerances		Coiled I.D. Tolerances				
	Coiled Width in. (mm)	Tolerances in. (mm)	Coil I.D. Range in. (mm)		Tolerances in. (mm)		
All Diameters	Below 6 (152)	+ 0 - 1/8 (+0.00 - 3.18)	Below 0.625	(Below 15.88)	+0.000 - 0.015	(+0 - 0.38)	
	6 to 10 (152 to 254)	+ 1/8 - 3/8 (+3.18 - 9.53)	0.625 to 0.999	(15.88 to 25.38)	+0.000 - 0.030	(+0 - 0.76)	
	Over 10 (Over 254)	+ 1/4 - 1/4(+6.35 - 6.35)		1.000 to 1.999	(25 to 50.78)	+0.000 - 0.062	(+0 - 1.58)
				2.000 to 2.999	(51 to 76.18)	+0.000 - 0.125	(+0 - 3.18)
				3.000 to 3.999	(76 to 101.58)	+0.000 - 0.250	(+0 - 6.35)
				4.000 to 4.999	(102 to 126.98)	+0.000 - 0.375	(+0 - 9.53)
				5.000 and Over	(127 and Over)	+0.000 - 0.500	(+0 - 13.00)

When the O.D. of the coil is required as the critical dimension, it must be specified at the time of ordering so that proper coiling procedures can be determined. I.D. and O.D. dimensions cannot be held on the same unit. Please contact your Watlow representative prior to ordering coiled cable heaters requiring other than standard tolerances.

### Cable Straight Length Tolerances

Length	≤ 24 in.	>24 in. ≤ 60 in.	>60 in. ≤ 100 in.	>100 in.
Tolerance	±3/8 in.	±1/2 in.	±1 in.	±1%

# Specialty Heaters

## Coil/Cable Heaters

### Formation Options

#### Coil Heaters

The coil heater can be tight wound or open pitch.

#### Lead Orientation Options for Coiled Cable Heaters

#### Closed Coil without Distributed Wattage

#### Closed Coil with Distributed Wattage

#### Flat Spiral

Flat, spiral formations are used to heat flat circular surfaces. This formation is often used in semiconductor and medical applications.

**Flat Spiral with 2A Type Lead Orientation**

**Flat Spiral with 2C Type Lead Orientation**

**Flat Spiral with 2F Type Lead Orientation**

#### Flat Spiral Inside Diameter Standards

Spiral Inside Diameter – in.	Cable Diameter – in.				
	1/16 (0.062)	3/32 (0.094)	1/8 (0.125)	5/32 (0.156)	3/16 (0.188)
5/8 (0.625)	✓	✓	✓		
3/4 (0.75)		✓	✓	✓	✓
7/8 (0.875)			✓	✓	
1 (1.0)			✓	✓	✓
1 <sup>3</sup> / <sub>16</sub> (1.187)			✓		
1 <sup>1</sup> / <sub>4</sub> (1.25)			✓		
1 <sup>1</sup> / <sub>2</sub> (1.5)			✓	✓	✓
2 (2.0)			✓		
2 <sup>1</sup> / <sub>2</sub> (2.5)			✓		
3 (3.0)			✓	✓	✓

**Note:** Maximum outside diameter is 6 inches.

# Specialty Heaters

## Coil/Cable Heaters

### Formation Options (Continued)

#### Star Wound

Star wound formations are usually inserted into pipes or ducts and used to heat moving air or liquids. The offset coils increase and induce turbulent flow. This allows the flowing material to have better contact with the heater surface to provide efficient heat transfer.

### Internal Construction

#### Sheath with Coiled Internal Resistance Wire

Resistance wire wound into a small coil is loaded into insulating cores, then into metal tubing and swaged to final size. This construction method is called **coil wire or parallel coil**.

The coil method allows for a no-heat section in the sheath. The length of either the heated section or the no-heat section is variable as long as the combined length does not exceed 72 in. (1829 mm). Other features of this construction method include:

- Variable ohms/foot within a minimum and maximum range
- Variable location of the thermocouple junction
- Grounded or ungrounded thermocouple junction
- No-heat sections
- 304 stainless steel
- A variety of diameters and shapes:
  - 0.094 in. (2.4 mm) round
  - 0.125 in. (3.2 mm) round (minimum diameter with internal thermocouple)
  - 0.102 in. (2.6 mm) square
  - 0.128 in. (3.3 mm) square
  - 0.102 in. X 0.156 in. (2.6 mm X 4 mm) rectangular

#### Sheath with Straight (Uncoiled) Resistance Wire

Straight resistance wires are positioned inside a large diameter metal tube. The tube assembly is repeatedly pulled through draw dies until the desired diameter is achieved. Though limited to fixed incremental ohms/foot and without no-heat sections, this **straight wire or drawn cable** construction method allows:

- Essentially no limit on cable length
- Thermocouple junction only at the disk end of the sheath
- Grounded or ungrounded thermocouple junction
- Full length of the sheath is heated
- 304 stainless steel
- A variety of diameters and shapes:
  - 0.040 in. (1.0 mm) round
  - 0.062 in. (1.6 mm) round
  - 0.094 in. (2.4 mm) round
  - 0.125 in. (3.2 mm) round (minimum diameter with internal thermocouple)
  - 0.157 in. (4.0 mm) round
  - 0.188 in. (4.8 mm) round
  - 0.128 in. (3.3 mm) square\*
  - 0.102 in. X 0.156 in.\* (2.6 mm X 4 mm) rectangular

\* Maximum length is 140 in. (3556 mm)

# Specialty Heaters

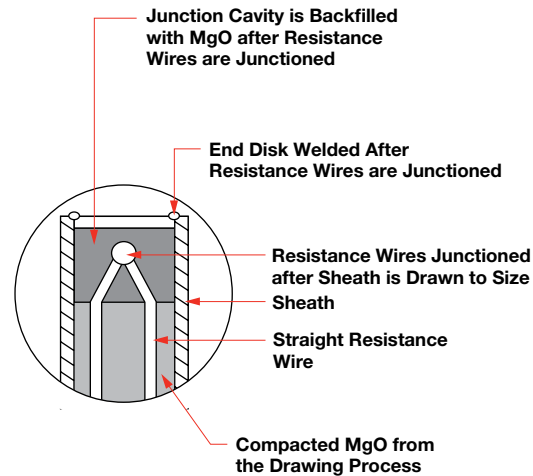

## Coil/Cable Heaters

### Internal Construction (Continued)

#### Disk End of Sheath

**Coiled Internal Resistance Wire**

**Straight (Uncoiled) Resistance Wire**

The end of the heater sheath opposite from the lead exit end is called the disk end.

With coil construction methods, the internal resistance wires form a 180° bend inside the sheath and do not require a junction. After the end cap has been welded in place, the entire area at the end of the sheath is swaged to provide maximum density of the magnesium oxide (MgO).

With straight construction, the internal wires—whether resistance or thermocouple—must be junctioned before the heater sheath can be finished. MgO is removed from the tip of the sheath to expose the wires which are junctioned by welding. MgO powder is backfilled into the cavity surrounding the junctioned wires and lightly compacted. The end cap is inserted and welded into place.

## Thermocouples

Internal thermocouples are available in ASTM Type J or K calibration with both the coil or straight construction methods.

### Coil:

- 0.125 in. (3.2 mm) round
- 0.128 x 0.128 in. (3.3 x 3.3 mm) square
- 0.102 x 0.156 in. (2.6 x 4.0 mm) rectangular

### Straight:

- 0.125 in. (3.2 mm) round
- 0.157 in. (4.0 mm) round
- 0.188 in. (4.8 mm) round
- 0.128 x 0.128 in. (3.3 x 3.3 mm) square
- 0.102 x 0.156 in. (2.6 x 4.0 mm) rectangular

# Specialty Heaters

## Coil/Cable Heaters

### Options—Internal Construction

#### Adapters

Adapters are transition sections where lead wires are attached and connected with the internal wires from the heater sheath.

The **positive connection** lap joint brazes or welds the wire lap joint before the adapter is compacted. Positive connection is used in all standard applications and adds protection in high temperature environments.

An extended length adapter collar, or **high temperature** collar, is used as a heat sink enabling the heater to operate in high temperature, demanding applications.

The positive connection and collar are used in conjunction with both power leads and thermocouple leads.

#### External Construction

##### Lead Wire

100 percent nickel, copper, nickel plated copper or silver plated copper.

##### Insulation

PTFE, fiberglass or a high temperature variety such as MGT or MGE.

##### Lead Protection

Stainless steel hose, stainless steel braid or fiberglass braid.

Contact your Watlow representative for details.

Strip/Clamp-On Heaters

# Strip/Clamp-On Heaters

## Mineral Insulated (MI) Strip Heaters

The MI strip heater is a thin, responsive heater that uses the most advanced heater construction techniques. A nickel-chromium element wire is embedded in Watlow's exclusive mineral insulation material, which has a much higher thermal conductivity than the mica and hard ceramic insulators used in conventional heaters. This thin layer of insulation brings the element wire closer to the heater sheath. The result is heat flows easily from the element wire to the sheath allowing the wire to run cooler than conventional heaters and increasing heater life.

### Performance Capabilities

- Sheath temperatures up to 1400°F (760°C)
- Watt densities up to 140 W/in<sup>2</sup> (21.7 W/cm<sup>2</sup>)
- Maximum voltage up to 480VAC
- UL® component recognition for most 240VAC or less designs (UL® File #E52951)

### Features and Benefits

#### Higher watt densities than any other strip heater

- Provides faster heat up

#### Exclusive mineral insulation

- Combines dielectric strength and superior thermal conductivity
- Transfers heat rapidly to the sheath

#### 304 stainless steel sheath

- Maintains the high compaction of mineral insulation
- Produces a rigid heater

### Typical Applications

- Solder pots
- Zinc die-casting equipment
- Die and mold heating
- High-temperature resins
- Tank and platen heating
- Ovens
- Packaging equipment

# Strip/Clamp-On Heaters

## Mineral Insulated (MI) Strip Heaters

### Applications and Technical Data

#### Calculating Watt Density

Watt density is the amount of wattage per square inch of heated area. To determine watt density, divide the total wattage by the heated area.

$$\text{Watt Density} = \frac{\text{Wattage}}{\text{Heated Area}}$$

To apply this equation, the heated area is the total contact surface of the heater less areas of no-heat found around terminals, mounting holes, etc.

**Heated Area = Total Contact Area - No-Heat Area**

**To calculate the heated area:**

- Using the chart below, locate the **no-heat factor** corresponding to the type of heater being considered.
- To use the formula below, insert the no-heat factors, length and width (in inches).

$$\text{Heated Area} = (\text{Overall Length} - \text{No-Heat Factor}) \times \text{Width}$$

Type	No-Heat Factor (in.)
<b>1 in. Wide</b>	
1 in. wide post terminal 1 on 1	1.75
1 in. wide post terminal 1 on 1 with mounting holes	3.00
<b>For all other widths</b>	
2 on 1 post terminal	1.18
2 on 1 with mounting holes	3.18

The drawings on the next page and the graph on this page will help in selecting the correct watt density for a particular application. First, refer to the drawings to determine the heated area of the heater. Then, use the

watt density formula and graph to ensure that the maximum watt density of the heater does not exceed the specific application requirements.

$$\text{Watt Density} = \frac{\text{Wattage}}{\text{Heated Area}}$$

# Strip/Clamp-On Heaters

## Mineral Insulated (MI) Strip Heaters

### Applications and Technical Data (Continued)

#### Specifications

##### Width

- 1, 1½ and 2 in. (25, 38, 51 mm), tolerance  $\pm 1/32$

##### Length

- 8 to 30 in. (203 to 762 mm), tolerance  $\pm 1/8$

##### Terminations

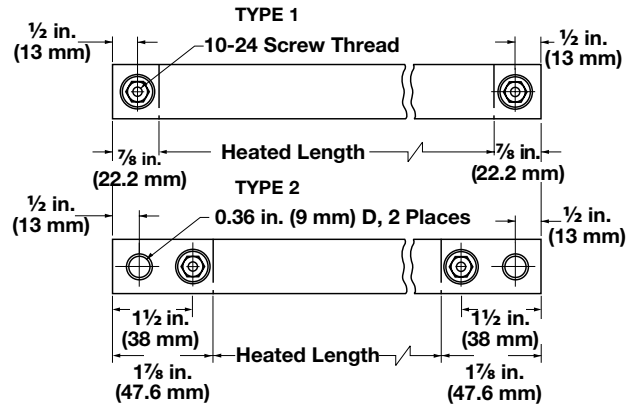

- 1 in. (25 mm) wide—post terminals one-on-one
- 1½ to 2 in. (38 to 51 mm)—post terminals two-on-one

#### All Widths

**Note:** In most applications, mounting holes alone do not provide adequate clamping. A clamp bar should be used for each 4 in. (102 mm) of heater length.

#### 1 in. (25 mm) Wide

#### 1½ in. – 2 in. (38 – 51 mm) Wide

# Strip/Clamp-On Heaters

## Mineral Insulated (MI) Strip Heaters

### Applications and Technical Data (Continued)

#### Options

##### Thermocouple Pocket

A thermocouple pocket welded to the back surface accepts a 0.063 in. (1.6 mm) diameter thermocouple. This option provides accurate temperature sensing and easy thermocouple replacement. Thermocouple not included.

#### Accessories

##### Ceramic Terminal Covers

Ceramic terminal covers offer a convenient and economic method to insulate post terminals. They are sized for standard length posts with 10-24 screw thread size, supplied as an accessory item and shipped separately. Specify Z4918 and quantity.

#### Parallel Terminals Part Numbers—Type 3 and 4

# Strip/Clamp-On Heaters

## 375 High-Temperature Strip Heaters

Named for its 0.375 in. (9.5 mm) thickness, the rugged Watlow® 375 strip heater is capable of both high temperatures and high watt densities.

Watlow begins construction by accurately placing a coiled, nickel-chromium element wire in the center of the heater. The element wire is then embedded in magnesium oxide (MgO)-based insulation compacted into a solid mass creating excellent heat conductivity and high dielectric strength. The heater is then enclosed in aluminized steel or 430 stainless steel sheathing.

### Performance Capabilities

- Aluminized steel sheath temperatures up to 1100°F (595°C)
- 430 stainless steel sheath temperatures up to 1200°F (650°C)
- Watt densities up to 100 W/in<sup>2</sup> (15.5 W/cm<sup>2</sup>)
- UL® approved up to 240VAC (File No. E52951)
- CSA approved up to 480VAC (File No. LR7392)

### Features and Benefits

**Nickel-chromium element wire is centered in the heater**

- Assures uniform heat

**Aluminized steel sheath**

- Operates at higher temperatures and resists corrosion better than iron-sheathed heaters
- Minimizes heat-up time

**Optional 430 stainless steel sheath**

- Meets temperature requirements that reach up to 1200°F (650°C)

**Post terminals, welded to the element wire**

- Produces strong, trouble-free connections

**Rigid 3/8 in. (9.5 mm) thick design**

- Enables the heater to fit into many existing applications

**Over 100 in-stock models in popular sizes and ratings**

- Allows next day shipment

**Available dimensions are 1 1/2 in. (38 mm) wide and 5 1/2 to 48 in. (140 to 1219 mm) long**

- Fits a variety of application needs

### Typical Applications

- Food warming
- Freeze and moisture protection
- Tank and platen heating
- Packaging
- Dies and mold heating
- Autoclaves
- Ovens
- Telecom

**RAPID SHIP**

# Strip/Clamp-On Heaters

## 375 High-Temperature Strip Heaters

### Applications and Technical Data

#### Calculating Watt Density

Use the *Maximum Allowable Watt Density* graphs and formulas to ensure the allowable watt density for the heater does not exceed the specific application requirements. **Watt density is calculated for one side of the heater only.**

#### Formulas

$$\text{Watt Density} = \frac{\text{Wattage}}{\text{Heated Area}}$$

Heated Area

$$\begin{aligned} \text{(Offset Terminals)} &= [\text{Overall Length (A)} \times 1.5 \text{ in.}] - 6 \text{ in}^2 \\ &= [\text{Overall Length (A)} \times 38 \text{ mm}] - 38.7 \text{ cm}^2 \end{aligned}$$

Heated Area

$$\begin{aligned} \text{(Parallel Terminals)} &= [\text{Overall Length (A)} \times 1.5 \text{ in.}] - 4.7 \text{ in}^2 \\ &= [\text{Overall Length (A)} \times 38 \text{ mm}] - 30.3 \text{ cm}^2 \end{aligned}$$

Heated Area

$$\begin{aligned} \text{(One-on-One Terminals)} &= [\text{Overall Length (A)} \times 1.5 \text{ in.}] - 6 \text{ in}^2 \\ &= [\text{Overall Length (A)} \times 38 \text{ mm}] - 38.7 \text{ cm}^2 \end{aligned}$$

# Strip/Clamp-On Heaters

## 375 High-Temperature Strip Heaters

### Termination Options

#### Offset Terminals

Two 10-24 threaded post terminals are offset from each other on the same end.

#### One-on-One Terminals

Two 10-24 threaded post terminals are placed one on each end.

#### Parallel Terminals

Two 10-24 threaded post terminals are used; both terminals on one end.

#### In-Line Terminals

Two 10-24 threaded post terminals are in-line with each other on the same end.

# Strip/Clamp-On Heaters

## 375 High-Temperature Strip Heaters

### Termination Options (Continued)

#### Metallic Terminal Boxes - Variations

Available on in-line terminals only.

Available on offset terminals from stock and manufactured.

Metallic terminal boxes are available from stock on offset terminals. Terminal boxes act as a safety feature by covering the terminals. A conduit may be attached to the box through  $\frac{7}{8}$  in. (22.2 mm) diameter holes in the ends of the box. To order, specify **terminal box**.

### Accessories

#### Ceramic Terminal Covers

Ceramic terminal covers offer a convenient and economic method to insulate post terminals. They are sized for standard length posts with 10-24 screw thread size, supplied as an accessory item and shipped separately. Specify **Z4918** and quantity.

#### Secondary Insulation Bushings

Insulators are suitable when air heating and/or voltage to ground is a concern. A secondary insulation bushing kit, part number **Z5230**, contains one set of bushings for one heater. To accommodate bushings,  $\frac{17}{32} \times \frac{11}{16}$  inch diameter mounting holes **must** be specified when ordering the heater.

# Strip/Clamp-On Heaters

EXTENDED  
CAPABILITY

## Extended Capabilities For 375 High-Temperature Strip Heaters

### Options

#### Tab Removal

Length without tabs equals total length including tabs minus 1 $\frac{1}{2}$  in. (38 mm).

#### Flat Tabs

Mounting tabs can be formed flat to allow bar clamping.

#### Moisture Protection

##### Improved Insulation Resistance Value (IIRV)

**Treatment**—This process coats the MgO insulation. The treated insulation fends off moisture when unheated for long periods of time. It is also ideal for heaters that are exported to customers around the world, where high humidity may be a problem.

#### Ground Studs and Mounting Studs

Standard  $\frac{1}{4}$ -20 x 1 $\frac{1}{2}$  in. (38 mm) or M6-1 x 40 steel studs are welded to the heater. Contact your Watlow representative for exact locations on specific heaters.

# Strip/Clamp-On Heaters

## FIREBAR® Clamp-On Heaters

FIREBAR® heating elements provide added heating performance over standard round tubular heating elements—especially for immersion applications in petroleum based liquids requiring high kilowatts.

The FIREBAR's unique flat surface geometry packs more power in shorter elements and assemblies, along with a host of other performance improvements. These include:

- Minimizing coking and fluid degrading
- Enhancing the flow of fluid past the element's surface to carry heat from the sheath
- Improving heat transfer with a significantly larger boundary layer allowing much more liquid to flow up and across the sheath's surface

FIREBAR elements are available in single- and double-ended constructions with one inch or  $\frac{5}{8}$  inch heights. These two configuration variables make it possible to use FIREBAR elements instead of round tubular elements in virtually all applications.

One-Inch Double-Ended FIREBAR Element and Lead Configurations

$\frac{5}{8}$ -Inch Double-Ended FIREBAR Element and Lead Configurations

**For detailed product and technical data,  
see the full FIREBAR product  
section located on pages 93 through 111.**

# Strip/Clamp-On Heaters

## Thick Film Conduction Heaters

The Watlow 430 stainless steel thick film conduction heater is ideal for many applications where fast response and uniformity are essential. A clamp-on, thick film heater provides the best possible combination of heat transfer, thermal efficiency, temperature response and uniformity in a low profile package.

This high-performance heater can be used in areas where space is limited or where conventional heaters cannot be used due to limited voltage and wattage combinations.

Thick film conduction heaters provide a low profile in a variety of shapes including two-dimensional circular and rectangular forms. Direct contact of thick film heaters to surfaces ensures efficient heat transfer through thermally stable substrates and precise resistance trace patterns.

### Performance Capabilities

- Maximum substrate temperature up to 1022°F (550°C). Contact your Watlow representative for applications over 842°F (450°C)
- Watt densities up to 75 W/in<sup>2</sup> (11.6 W/cm<sup>2</sup>)
- Voltages up to 240V

### Features and Benefits

#### Watt densities up to 75 W/in<sup>2</sup> (11.6 W/cm<sup>2</sup>) for clamp-on applications

- Allows precise, repeatable wattage distribution and uniform temperature profile

#### Threaded stud termination

- Produces strong, trouble-free connections, see *Termination Assembly* drawing on page 464

#### Agency approvals

- UL® component recognition available upon request

### Typical Applications

- Food warming cabinets
- Load dump resistors
- Seal bars
- Deposition chamber lids

**For detailed product and technical data,  
see the full Thick Film Conduction  
product section located on pages 463 through 466.**

Band/Barrel Heaters

# Band/Barrel Heaters

## Mineral Insulated (MI) Band Heaters

The mineral insulated (MI) band heater from Watlow® is a high-performance heater that incorporates Watlow's exclusive mineral insulation. This material offers much higher thermal conductivity than mica and hard ceramic insulators that are used in conventional heaters.

A thin layer of the "high" thermally conductive MI material electrically insulates the element wire from the inside diameter of the heater sheath. A thicker, low thermally conductivity layer backs up the element wire directing the heat inward toward the part being heated. The result is more efficient heat transfer, which lowers element wire temperatures and increases heater life.

### Performance Capabilities

- Heater operating temperatures up to 1400°F (760°C)
- Watt densities up to 100 W/in<sup>2</sup> (15.5 W/cm<sup>2</sup>) available on large diameter barrel bands
- Maximum voltage to 480V

### Features and Benefits

#### High thermal conductivity of MI and low mass construction

- Provides an almost instant response to temperature control
- Eliminates thermal lag and temperature overshoot associated with ceramic insulated heaters

#### Operating temperatures up to 1400°F (760°C)

- Allows safe melting of resins such as PEEK™, Teflon®, Ultem® and Zytel®

#### Higher watt densities

- Contributes to faster heat-up and throughput for increased productivity

#### Stainless steel cover and side fold design

- Resists contamination from overflow of plastic or other free-flowing materials

#### Attached clamp bars

- Eliminates cumbersome clamping straps to ease installation

### Typical Applications

- Extruders
- Blown film dies
- Injection molding machines
- Other cylinder heating applications

# Band/Barrel Heaters

## Mineral Insulated (MI) Band Heaters

### Applications and Technical Data

The *Physical Limitations of Variations* table shows the availability of widths, inside diameters and terminations for Watlow's MI band, barrel and nozzle heaters. To ensure available terminations meet application needs, refer to the termination variation illustrations in this section.

If the application requires a heater exceeding limitations shown, contact your Watlow representative.

### General Limitations

- Maximum width of 1 in. (25 mm) diameter heater: 1<sup>1</sup>/<sub>2</sub> in. (38 mm)
- Maximum heater width: 2x heater diameter
- Minimum I.D. for Type B, C, E and H leads: 1 in. (25 mm)
- Minimum I.D. for Type B—90° leads: 1<sup>1</sup>/<sub>8</sub> in. (29 mm)
- Maximum lead amperes: 12.5A per pair
- SLE maximum: 17.0A
- Maximum amperes (post terminals): 30A per pair
- Minimum diameter and width for SLE: 4 in. x 1<sup>1</sup>/<sub>2</sub> in. (102 mm x 38 mm) width
- 90° leads not available over 250VAC
- Minimum I.D. for post terminals: 1<sup>1</sup>/<sub>4</sub> in. (32 mm)
- Actual width for 7 in. (178 mm) wide heater: 6<sup>7</sup>/<sub>8</sub> in. (175 mm)

### Gaps

- ≤ 3 in. = 1/8 in. nominal
- 3 in. ≤ 6 in. = 1/4 in. nominal ±1/8 in.
- 6 in. ≤ 14 in. = 3/8 in. nominal ±1/8 in.
- >14 in. = 1/2 in. nominal ±1/4 in.

# Band/Barrel Heaters

## Mineral Insulated (MI) Band Heaters

### Applications and Technical Data (Continued)

#### Calculating Watt Density

Watt density is the amount of wattage per square inch of heated area. To determine watt density, divide the total wattage by the heated area.

$$\text{Watt Density} = \frac{\text{Total Watts}}{\text{Heated Area}}$$

To apply this equation, the term “heated area” must be defined. Heated area is the total contact surface of the heater less the areas of no-heat found around terminals, mounting holes, etc.

**Heated Area = Total Contact Area - No-Heat Area**

To calculate the heated area:

1. Locate the **no-heat factor** from the chart below that corresponds to the type of heater being considered.

Type	No-Heat Factor in.
1 pc. lead unit Type B, C, H, E or 90°B	1.37
1 pc. post terminal	1.60
1 pc. expandable post term	3.18
1 pc. expandable lead unit	3.00
True 2 pc. post term	3.20
True 2 pc. leads	2.74
SLE	3.68

2. To use the formula below, insert the no-heat factors, diameter and width (in inches).

$$\text{Heated Area} = (3.14 \times \text{Diameter} - \text{No-Heat Factor}) \times \text{Width}$$

#### Maximum Allowable Watt Density

The following derating factors apply to the *Maximum Allowable Watt Density* chart, which are displayed in both inches and millimeters. Review these factors and the chart to determine the correct watt density curve for the application.

#### Derating Factors:

- For units over 2 in. (51 mm) in width, multiply the watt density by 0.80.

- For applications where unusual operating conditions are present, such as irregular mounting surfaces, contact your Watlow representative for watt density limitations.
- For two-piece units used in vertical applications, refer to *Clamping Matrix Application Guide* on page 496.
- For applications where insulating blankets are used, multiply watt density by 0.75.

# Band/Barrel Heaters

## Mineral Insulated (MI) Band Heaters

### Applications and Technical Data (Continued)

- Review the *Watt Density* chart to ensure the application does not exceed the maximum watt density at operating temperature after applying derating factors.
- Locate clamping guideline for unit diameter, width and watt density.
- Description of guideline letters are at the bottom of the *MI Band Clamping Matrix Application Guide*.
- Note:** Upward arrows are up to and not including specified watt density. Downward arrows are greater than or equal to specified watt density.

### Termination Variations

#### Post Terminals

##### Stock

Post terminals provide optimum connections. Screw thread is 10-24. To order, specify **post terminals** (metric threads available).

#### Lead Wire

Heaters rated at less than 250VAC use UL<sup>®</sup> approved lead insulation for operations to 480°F (250°C) as standard. Lead insulation UL<sup>®</sup> rated for operation to 840°F (450°C) is available for high-temperature applications where the leads are shrouded or enclosed with the heater. These leads are available in any of the Type B with loose braid as well as Types E, F and H lead configurations. All heaters rated at more than 250VAC use this wire. When ordering, specify **850°F (450°C) wire**.

Leads Type B, Type B - 90° rotation, Type B - 180° rotation or Type C: Two fiberglass-insulated lead wires exit in a single metal braid for good abrasion protection, lead flexibility and wiring convenience. Leads are 2 in. (51 mm) longer than braid. Shipped with 12 in. (305 mm) leads, unless longer length is specified. To order, specify **type and length**.

#### Type B - 90° Rotation

### Termination Variations (Continued)

#### Lead Wire (Continued)

##### Type C Stock

##### Type F Stock

Type F: Loose fiberglass sleeving encloses two fiberglass leads for additional insulation protection where high temperature or minor abrasion is present. Leads are 2 in. (51 mm) longer than the sleeving. To order, specify **Type F** and **length**.

##### Type E Stock

Type E: Loose metal braid encloses two fiberglass leads for good abrasion protection, lead flexibility and wiring convenience. Leads are 2 in. (51 mm) longer than the braid. Shipped with 12 in. (305 mm) leads, unless longer length is specified. To order, specify **Type E** and **length**.

##### Type H Stock

Type H: A flexible steel hose encloses the leads for maximum abrasion protection. Leads are 2 in. (51 mm) longer than hose. Shipped with 12 in. (305 mm) leads, unless longer length is specified. To order, specify **Type H** and **length**.

# Band/Barrel Heaters

## Mineral Insulated (MI) Band Heaters

### Termination Variations (Continued)

#### Lead Wire (Continued)

##### Type K Stock

Type K: Flexible lead wires exit vertically from the heater. These leads can be bent adjacent to the heater for a quick and easy connection. To order, specify **Type K** and **length**.

##### Type SLE

Two fiberglass lead wires exit a single, tightly woven metal braid at a right angle on the expandable construction vs. two sets of leads. The minimum diameter capability is 4 in. (102 mm). Minimum width capability is 1<sup>1</sup>/<sub>2</sub> in. (38 mm). To order, specify **Type SLE** and **length**.

## Variations

### Thermocouple

ASTM Type J or K thermocouples are available on lead Type B with loose braid and fiberglass sleeving. They are also available on E, F and H leads. The thermocouple junction, spot-welded to the heater sheath, provides a signal for measuring relative heater temperature. A separate thermocouple is available.

### Heavy Duty Strain Relief

Heavy duty strain relief is recommended for applications where there is great stress or continued flexing of the leads. The strain relief is available on Type B, Type B - 90° and Type B - 180° leads only. To order, specify **heavy-duty strain relief**. **Note:** not available with loose braid or fiberglass sleeving.

# Band/Barrel Heaters

## Mineral Insulated (MI) Band Heaters

*Variations (Continued)*

### Expandable Heaters With Post Terminals or Leads

Expandable heaters are two-piece units with a common top metal allowing the heater to expand open to the full diameter of the barrel. On expandable bands, each half will be one half of the total wattage. Plus, on both expandable and two-piece bands, each half will be rated at full operating voltage, unless otherwise specified.

**MI band heaters 1<sup>1</sup>/<sub>2</sub> in. (38 mm) wide** or greater have post terminals located next to the expansion joint. Leads may be located anywhere along the circumference except near the gap and at the expansion joint. Two sets of leads required.

**On 1 in. (25 mm) wide** MI band heaters, post terminals will be located 90° from the expansion joint. Leads may be located anywhere along the circumference except near the gap and at the expansion joint. Two sets of leads are required. To order, specify **expandable**. Expandable heaters are designed to be opened for new installation only.

### Ceramic Terminal Cover

Ceramic covers, with openings for leads, are screwed on to post terminals, providing a convenient, economical insulator. To order, specify part number **Z-4918** and **quantity**. For metric sizes specify thread needed.

**Note:** Ceramic terminal covers will not fit on some stock expandable MI bands or nozzles. Contact your Watlow representative for more information.

### Metallic Terminal Box

Metallic terminal boxes are available from stock on 3<sup>1</sup>/<sub>2</sub> in. inside diameter x 1<sup>1</sup>/<sub>2</sub> in. wide (89 mm x 38 mm) or larger heaters. Terminal boxes, which attach directly to the heater, act as a safety feature by covering the terminals. Conduit may be attached to the box through <sup>7</sup>/<sub>8</sub> in. (22 mm) diameter holes in the ends of the box. Two-piece heaters require two boxes. To order, specify **terminal box**.

### MI Band Heater with Holes

MI band heaters with holes are available on all widths except 1 in. (25 mm) wide. Contact your Watlow representative for hole sizes and location constraints. To order, specify **hole size** and **location**. The inside diameter minimum is 3 in. (76 mm). **Note:** a minimum charge per line item applies.

# Band/Barrel Heaters

## Mineral Insulated (MI) Band Heaters

### Clamping Variations

#### Tig-Welded Barrel Nuts with Spring Loaded Clamping

Welded barrel nuts with spring loaded clamping are used to maintain a tight heater fit on large barrels during start-up. This clamping variation is recommended for all MI band heaters greater than 14 in. (356 mm) in diameter and 1 1/2 in. (38 mm) or greater in width. Refer to *MI Band Clamping Matrix Application Guide*. For smaller diameter heaters, it is an option and must be ordered separately. To order, specify **spring loaded clamping**.

#### Low-Profile Tig-Welded Barrel Nuts

Low-profile barrel nuts are available on all widths and provide a clearance of 0.470 in. (12 mm). However, this value can be higher depending on how far the clamp screw extends past the barrel nut. To order, specify **low-profile tig-welded barrel nuts**.

#### Low-Profile Clamp Bars

Low-profile clamp bars are available on both 1 in. (25 mm) and 1 1/2 in. (38 mm) wide heaters, for wider widths contact your Watlow representative. Watlow recommends not using low-profile clamping on diameters and widths greater than 3 in. (76 mm). The bars are 1/4 in. (6 mm) diameter with an 8-32 screw. To order, specify **low-profile clamp bars**.

#### Tig-Welded Barrel Nuts

Tig-welded barrel nuts can function like a hinge to allow two-piece heaters to be more easily installed. If a large gap is specified to provide access for instrumentation, tig-welded barrel nuts can be situated in such a way that the clamp screws do not interfere with the sensor. To order, specify **gap size and sensor location**. **Note:** a gap greater than 1 in. (25 mm) wide is considered extended capability.

### Options

#### Thermocouple Pocket

A thermocouple pocket welded to the surface accepts a 0.063 in. (2 mm) diameter thermocouple (not included). This option provides accurate temperature sensing of the heater and easy thermocouple replacement.

# Band/Barrel Heaters

EXTENDED  
CAPABILITY

## Extended Capabilities For Mineral Insulated (MI) Band Heaters

### Variations

#### High Temperature “Quick Disconnect” European Style Plugs

They provide the simplest and safest way to apply power to band heaters. The combination of high-temperature male and female “quick disconnect” plug assemblies eliminates all live exposed terminals and electrical wiring that can be a potential hazard to employees or machine. Maximum 15 amperes at 240VAC, maximum 240V. To order, specify **vertical** or **horizontal** European plug.

#### Ground Wire

Insulated ground wire is available, contact your Watlow representative.

#### Outside Diameter Heater

Two fiberglass-insulated lead wires rated to 840°F (450°C) exit a metal braid 180° opposite from gap, Type B outside diameter designed and constructed to mate with inside diameter of cylinders. Maximum width for outside diameter heaters is 6 in. (152 mm). To order, specify **outside diameter and width** of heater.

# Nozzle Heaters

## Mineral Insulated (MI) Nozzle Heaters

The mineral insulated (MI) nozzle heater is a high-performance heater that incorporates Watlow's exclusive mineral insulation technology. This material offers much higher thermal conductivity than mica and hard ceramic insulators used in conventional heaters.

A thin layer of the high thermal conductive MI material electrically insulates the element wire from the inside diameter of the heater sheath. A thicker, low thermal conductivity layer backs up the element wire, directing the heat inward toward the heated part. The result is more efficient heat transfer—a performance solution that lowers element wire temperatures and increases heater life.

### Performance Capabilities

- Heater operating temperatures up to 1400°F (760°C)
- Watt densities up to 230 W/in<sup>2</sup> (35.6 W/cm<sup>2</sup>) are available on small diameter nozzle
- Maximum voltage up to 240V

### Features and Benefits

#### Operating temperatures up to 1400°F (760°C)

- Melts resins such as PEEK®, Teflon®, Ultem® and Zytel® safely

#### Higher watt densities

- Contributes to faster heat-up and throughput for increased productivity

#### High thermal conductivity of MI and low mass construction

- Provides an almost instant response to temperature control
- Eliminates thermal lag and temperature overshoot

#### Stainless steel cover and side fold design

- Resists contamination by overflow of plastic or other free-flowing materials

#### Permanently attached clamp bars

- Eliminates cumbersome clamping straps to ease installation

### Typical Applications

- Extruders
- Blown film dies
- Injection molding machines
- Other cylinder heating applications

**For MI nozzle heater part numbers see next page.  
For detailed product and technical data,  
see the full MI Band Heater product  
section located on pages 493 through 502.**

# Nozzle Heaters

## Pre-Coiled Cable Nozzle Heaters

The Watlow pre-coiled, cable nozzle heater has been formed into a compact, tightly wound coil to supply 360 degrees of heat. This heater features a 5 in. (127 mm) long, no-heat tail section, which eliminates failures in the adapter area due to overheating.

This cable nozzle heater is manufactured with Watlow's swaged compaction process. This process provides a greater compaction of the MgO insulation than the competitor's rolling process. Compacting MgO insulation into a solid mass results in excellent heat conductivity and high dielectric strength.

### Performance Capabilities

- Watt density up to 100 W/in<sup>2</sup> (15.5 W/cm<sup>2</sup>)
- Possible operating temperature up to 1200°F (650°C)  
(Dependent on type of element wire used)
- 230 and 240V constructions

### Features and Benefits

#### Low-profile construction

- Provides easy installation in the tight environment of multiple-gate molds

#### No-heat tail section

- Reduces temperature at the adapter eliminating failures due to overheating

#### Single tail with dual lead

- Occupies less space in the wire raceway

#### 360° circumference heat

- Provides even heating

#### Optional externally welded thermocouple to the sheath

- Provides temperature measurement capabilities

### Typical Applications

- Plastic injection molding equipment
- Hot runner molds

Radiant Heaters

# Radiant Heaters

## RAYMAX® Panel Heaters

The RAYMAX® radiant panel heater product line from Watlow® solves virtually any application requiring radiant heat from contamination-resistant surfaces to fast responding high-temperature panels.

Watlow's engineering staff has the training and expertise required to meet the most complicated application requirements. Technical support includes calculating watt density and temperature requirements and recommending system components such as sensors and controllers.

### Performance Capabilities

- Maximum face temperature up to 2000°F (1095°C)
- Maximum watt densities up to 30 W/in<sup>2</sup> (4.7 W/cm<sup>2</sup>)

### Features and Benefits

#### Variety of styles

- Match the ideal temperature and watt density requirements of the application

#### Watlow engineering and application support

- Assures projects run smoothly

#### Custom designs

- Adapts to specific needs

#### Watlow sensors and controllers are compatible with RAYMAX heaters

- Offers a single-source thermal system that is reliable and designed for your application

### Typical Applications

- Thermoforming
- Food warming
- Paint and epoxy curing
- Heat treating
- High-temperature furnaces
- Tempering and annealing processes

#### **Caution: Fire Hazard**

Radiant heaters must not be operated in the presence of flammable vapors, gases or combustible materials without proper ventilation and safety precautions. Radiant heaters must be properly wired and controlled to comply with all applicable electrical codes.

# Radiant Heaters

## RAYMAX Panel Heaters

### RAYMAX 1010

Designed to resist contamination, the RAYMAX 1010 is ideal for use in screen printing, food warming and other low-heat applications. The heater's "sealed face" keeps contaminants away from the heating element, and the metal surface can be easily wiped or brushed clean whenever needed.

Rugged, all-metal construction creates a shock-proof, shatter-proof heater, which is durable and long lasting.

### Performance Capabilities

- Face temperature: 1000°F (540°C) maximum
- Watt densities: 10 W/in<sup>2</sup> (1.5 W/cm<sup>2</sup>) maximum
- 50 amperes maximum
- Maximum voltage up to 480V

### Features and Benefits

#### Uniform full-surface heat source

- Provides more even heat

#### Convenient ready-to-use package

- Makes installation easier

#### One-inch thick backside insulation

- Reduces losses

#### Totally sealed version available

- Suitable for hose down applications

#### Repeatable temperature sensing options

- Increases accuracy

#### UL® component recognized versions are available

### Typical Applications

- Drying screen-printed textiles
- Curing process coatings on circuit boards
- Food warming/cooking
- Epoxy curing
- Thermoforming

# Radiant Heaters

## RAYMAX Panel Heaters

### RAYMAX 1010

#### Applications and Technical Data

#### Sizes and Ratings

**Thickness:** 1<sup>3</sup>/<sub>4</sub> in. (45 mm)

**Voltage:** Customer specified up to 480V.

**Note:** Small heaters may not be able to be built at high voltages. Contact your Watlow representative for specific application requirements.

**Watt density:** Up to 10 W/in<sup>2</sup> (1.5 W/cm<sup>2</sup>), 50A max.

**Face temperature:** Up to 1000°F (540°C)

**Typical peak energy wavelength:** 3.5-4 microns

**Note:** New designs require a minimum charge per design.

#### Specifications

Heater Dimensions	Min.	Max.	Increments
Width: in. (mm)	4 (102)	20 (508)	2 (50.8)
Length: in. (mm)	10 (254)	68 (1727)	0.06 (1.6)
Area: in <sup>2</sup> (cm <sup>2</sup> )		864 (5574)	Any

**Note:** Less than maximum length x width may exceed the maximum area.

#### Options

- Terminal box
- Thermowell (VAT style thermocouple required)
- Thermocouple pocket (thermocouple required)
- Thermocouple welded to hot face
- Mounting studs
- Zoning
- Totally sealed construction
- Food-safe surface treatment

# Radiant Heaters

## RAYMAX Panel Heaters

### RAYMAX 1120

The RAYMAX 1120 radiant heater panel is lightweight, yet sturdy and durable. The emitter sheath is stainless steel with a black coating providing a highly efficient radiating surface. The heater's low mass allows rapid start-up and fast response to controllers.

The patented RAYMAX heater features 1 in. (25 mm) wide emitter strips which are individually replaceable for lower maintenance costs. Weighing only 5.5 lbs/ft<sup>2</sup> (26.8 kg/m<sup>2</sup>), the heater is easy to mount.

### Performance Capabilities

- Face temperature: 1100°F (595°C) maximum
- Watt density: 20 W/in<sup>2</sup> (3 W/cm<sup>2</sup>) maximum
- Maximum voltage up to 480V
- UL® component recognized versions are available

### Features and Benefits

#### Replaceable emitters

- Reduces cost

#### High temperature mica

- Insulates nickel chromium resistance wire, permitting longer heater life

#### High emissivity coating on emitter strips

- Improves radiant heating efficiency

#### 7/8 in. (22.2 mm) thick thermal insulation

- Backs the emitter strips to reduce backside losses

#### Uniform full surface heat source

- Provides better, more even heat

#### Special requirements are easily met

- Ensures availability of custom sizes and ratings

#### Next day shipment on RAPID SHIP heaters

- Provides quick delivery to meet customer's needs

### Typical Applications

- Thermoforming
- Textile drying
- Paint curing
- Powder coating fusing
- Shrink wrapping
- Circuit board soldering

- Panels are equipped with a terminal box, a thermocouple well with bayonet adapter and mounting studs.
- Radiant panels must be properly applied for safe operation.
- Please contact your Watlow representative with the application before ordering.

# Radiant Heaters

## RAYMAX Panel Heaters

### RAYMAX 1220 and 2030

Easy to install and capable of high surface temperatures, the RAYMAX 1220 and 2030 panel heaters are ideal for many process heating applications requiring “hot-face” temperatures above 1000°F (540°C).

Each unit consists of a ceramic fiber heater mounted in a 2½ in. (64 mm) deep sheet metal case providing thermal insulation. The case includes post terminals for electrical connections and a mounting system that can be used with virtually any flat ceramic fiber unit. Since any flat unit heating element configuration can be used—exposed sinuated, embedded coil or foil elements—watt density and temperature capabilities can be tailored to meet a specific radiant application.

### Performance Capabilities

- RAYMAX 2030 (uses sinuated or coil elements): temperatures up to 2000°F (1095°C); watt densities up to 30 W/in<sup>2</sup> (4.7 W/cm<sup>2</sup>)
- RAYMAX 1220 (uses an etched foil element): temperatures up to 1200°F (650°C); watt densities up to 20 W/in<sup>2</sup> (3 W/cm<sup>2</sup>)
- Maximum voltage up to 600V

### Features and Benefits

#### Lightweight, low mass design

- Allows fast response to controllers

#### Self insulation with 2½ in. (64 mm) thick mounting case

- Provides high efficiency

#### Thermocouple mounting clamp

- Makes process system control easier

#### Aluminized steel case

- Handles temperatures up to 1100°F (595°C)

#### Special hot-face heating patterns

- Provides a design made specifically for an application using an etched foil RAYMAX 1220

### Typical Applications

- Conveyor furnaces
- High-temperature vessel heating
- Tempering and annealing processes for glass, wire, ceramics and metals
- Coating, curing and drying of inks, paints, plastics and films

## RAYMAX Panel Heaters

### RAYMAX 1330

The RAYMAX 1330 is the only radiant heater featuring specially insulated heater emitter strips for higher performance. Watlow's unique compacted mineral insulation electrically insulates the element wire, creating superior heat transfer and higher operating capabilities.

The RAYMAX 1330 lasts longer due to its rugged stainless steel construction. It features a high emissivity black coating and a uniform, full-surface heat source for better efficiency.

### Performance Capabilities

- Maximum face temperature: 1300°F (700°C)
- Maximum watt density: 30 W/in<sup>2</sup> (4.7 W/cm<sup>2</sup>)
- Typical peak energy wavelength: 3-3.6 microns
- Maximum voltage up to 480V

### Features and Benefits

#### Field replaceable emitter strips

- Eliminates the cost to buy a whole new radiant heater

#### Rugged metal construction

- Protects the heater from contaminants

#### No reflectors

- Eliminates cleaning and replacement

#### No fragile glass or ceramic elements

- Prevents possible safety hazards

#### Backside insulation

- Results in better heating efficiency

#### Responsive face temperature sensing options

- Increases accuracy

### Typical Applications

- Thermoforming plastics and composites
- Circuit board soldering
- Heat shrinking of plastic

## RAYMAX Panel Heaters

### RAYMAX 1330

#### Applications and Technical Data

#### Sizes and Ratings

**Thickness:** 2.46 in. (62.5 mm)

**Voltage:** Customer specified up to 480V. Balanced 3-phase is available on units with three or six emitters.

**Note:** Small heaters may not be able to be built at high voltages. Contact your Watlow representative to discuss specific application requirements.

**Maximum Watt Density:** 30 W/in<sup>2</sup> (4.7 W/cm<sup>2</sup>)

**Maximum Face Temperature:** 1300°F (700°C)

**Typical Peak Energy Wavelength:** 3 microns

**Standard Tolerances:** ±1/16 in. (1.6 mm)

#### Specifications

Heater Dimensions	Min.	Max.	Increments
Length: in. (mm)	12 (305)	30.5 (775)	0.06 (1.5)

Number of Emitters	Heated Width in. (mm)	Overall Width in. (mm)
1	2.95 (75)	3.36 (85)
2	6.14 (156)	6.54 (166)
3	9.33 (237)	9.73 (247)
4	12.51 (318)	12.92 (328)
5	15.70 (399)	16.11 (409)
6	18.89 (480)	19.29 (490)

#### Options

- Terminal box
- Thermowell
- Thermocouple welded to hot face
- Thermocouple pocket
- Mounting studs

# Radiant Heaters

## RAYMAX Panel Heaters

### Mounting Accessories

#### Mounting Studs

Standard  $1/4$ -20 x  $1\frac{1}{2}$  in. (38 mm) or (M6-1 x 40) steel studs are welded to the case. For best support, studs should be approximately located on 12 in. (305 mm) centers. Contact your Watlow representative for exact locations on specific heaters.

Available with RAYMAX 1010, 1120, 1220, 1330 and 2030.

#### Mounting Legs

Mounting legs are extensions of the steel end caps with mounting slots for bolting directly to field support members. There is no extra charge for legs. They can be supplied in half inch increments from 0.5 in. (13 mm) to 3 in. (76 mm). Slots are not provided in legs less than 1 in. (25 mm) long.

For panels over 24 in. (610 mm) long, mounting studs are recommended for the best panel support.

Available with RAYMAX 1120, 1220 and 2030 (Available as an extended capability for RAYMAX 1010 and 1330.)

**Application note:** Allow for some thermal expansion of the heater case during operation. An expansion of up to one percent can occur when the case reaches its normal maximum limit of 1100°F (595°C). If the equipment has mounting screws to connect to the slots in the mounting legs, allow for a small amount of extra length. If mounting holes are used to interface with the mounting studs on the back of the RAYMAX case, make sure that the holes are oversized. Use washers and avoid overtightening the screws.

### Terminal Accessories

#### Terminal Box

To protect electrical connections, a standard NEMA octagon terminal box is available. The standard size is  $3\frac{9}{16}$  x  $3\frac{9}{16}$  x  $1\frac{1}{2}$  in. (90.5 x 90.5 x 38 mm) with knockouts for  $1/2$  in. (13 mm) conduit. Other NEMA sizes are available as an extended capability.

Care should be taken to use lead wire capable of withstanding the ambient temperatures.

Available with RAYMAX 1010, 1120, 1220, 1330 and 2030.

#### Zoning

Watt densities can be varied across the entire width of RAYMAX heaters. If desired, each zone can have an individually controlled power supply.

Zoning can be very valuable when part of the product requires more heat, or when it must compensate for heat losses at the edges. Separately turning off part of the heated width enables the heater to adjust for various widths of material.

Available with RAYMAX 1010, 1120 and 1330.

(Available as an extended capability for RAYMAX 1220 and 2030.)

# Radiant Heaters

## RAYMAX Panel Heaters

### Temperature Control

#### Thermowells

A thermowell allows a thermocouple to be used with a bayonet fitting to monitor heater temperature. The thermowell is located on the back of the panel to allow easy access for thermocouple replacement. A spring tension holds the tip of the thermocouple in contact for close control of the heater temperature. A thermocouple is not included.

**Available with RAYMAX 1010, 1120 and 1330.**

#### Welded Thermocouple

A thermocouple junction is welded to the emitting surface to provide optimum temperature sensing accuracy and responsiveness. This option permits the actual radiating face temperature to be precisely monitored and controlled. The standard length of the thermocouple wire is 12 in. (305 mm).

**Available with RAYMAX 1330.**

#### Thermocouple Clamps

A thermocouple mounting clamp can be provided on the end of the heater case. The clamp is suitable for  $\frac{1}{8}$  in. (3.2 mm) and  $\frac{1}{4}$  in. (6 mm) outside diameter sheath thermocouples bent to  $90^\circ$  so that the sensing tip is just above and lightly touching the hot face at an element location.

**Available with RAYMAX 1220 and 2030.**

#### Thermocouple Pocket

A thermocouple pocket welded to the emitting surface accepts a 0.063 in. (1.6 mm) diameter thermocouple (not included). This option provides accurate temperature sensing and easy thermocouple replacement.

**Available with RAYMAX 1010, 1120 and 1330.**

# Radiant Heaters

**EXTENDED  
CAPABILITY**

## Extended Capability For RAYMAX Panel Heaters

### Specifications

#### RAYMAX 1120

Heater Dimensions	Min.	Max.	Increments
Width: in. (mm)	24 (610)	36 (914)	1 (25.0)
Length: in. (mm)	6 (152)	94 (2388)	0.06 (1.5)
Area: in <sup>2</sup> (cm <sup>2</sup> )	6 (38.7)	864 (5574.2)	Any

**Note:** Less than maximum length x width may exceed the maximum area.

#### RAYMAX 1330

Number of Emitters	Heated Width in. (mm)	Overall Width in. (mm)
7	22.08 (560.8)	22.48 (570.9)
8	25.26 (641.6)	25.67 (652.0)

### Mounting Legs

Mounting legs are extensions of the steel end caps with mounting slots for bolting directly to field support members. They can be supplied in half inch increments from 0.5 in. (13 mm) to 3 in. (76 mm). Slots are not provided in legs less than 1 in. (25 mm) long.

For panels over 24 in. (610 mm) long, mounting studs are recommended for the best panel support.

**Available as an extended capability for RAYMAX 1010 and 1330.**

**Application note:** Allow for some thermal expansion of the heater case during operation. An expansion of up to one percent can occur when the case reaches its normal maximum limit of 1100°F (595°C). If the equipment has mounting screws to connect to the slots in the mounting legs, allow for a small amount of extra length. If mounting holes are used to interface with the mounting studs on the back of the RAYMAX case, make sure that the holes are oversized. Use washers and avoid overtightening the screws.

### Zoning

Watt densities can be varied across the entire width of RAYMAX heaters. If desired, each zone can have an individually controlled power supply.

Zoning can be very valuable when part of the product requires more heat, or when it must compensate for heat losses at the edges. Separately turning off part of the heated width enables the heater to adjust for various widths of material.

**Available as an extended capability for RAYMAX 1220 and 2030.**

### Wiring Raceway

A steel raceway provides electrical and physical protection for all terminal connections. This can be particularly useful for multi-zone panels.

**Available as an extended capability for RAYMAX 1010, 1120, 1220, 1330 and 2030.**

# Radiant Heaters

## Extended Capabilities For Mineral Insulated (MI) Band and Strip Emitters

These heaters are constructed using Watlow's exclusive mineral insulation, which features high thermal conductivity. The band and strip emitters are constructed of rugged stainless steel sheath and a high emissivity coating.

### Performance Capabilities

- Maximum operating temperature up to 1300°F (704°C)
- Maximum watt densities up to 30 W/in<sup>2</sup> (4.7 W/cm<sup>2</sup>)

### Sizes

#### Strip Emitters

Width: 2 in. (51 mm), 3 in. (76 mm)  
Length: 6 in. (152 mm) minimum,  
31 in. (787 mm) maximum

#### Band Emitters

Width: 1 in. (25 mm), 2 in. (51 mm),  
3 in. (76 mm) maximum

- Segment length: 6 in. (152 mm) minimum to 42 in. (1067 mm) maximum
- Contact your Watlow representative for partial arcs up to full 360° coverage
- High emissivity coating on inside is standard. For high emissivity coating on the outside, contact your Watlow representative.
- Post terminals are standard. High-temperature leads are available on bands only.

### Options

- Mounting studs
- Mounting clips for 3 in. (76 mm) wide emitter strips, part #MM6063
- Thermocouple welded to sheath
- Thermocouple pocket welded to sheath

### Features and Benefits

#### Exclusive mineral insulation

- Combines dielectric strength and superior thermal conductivity
- Transfers heat rapidly to the sheath

#### High thermal conductivity of MI

- Provides an almost instant response to temperature control
- Eliminates thermal lag and temperature overshoot associated with other heaters

**Mounting Clip (Part # MM6063)**  
(For 3 in. (76 mm) wide strip heater)

### Typical Applications

- Heating rotating drums and rollers
- Tube ovens
- Small spot heating
- Heat shrinking and curing wire coatings
- Heat laminating wheels

# Thermostats and Accessories

Thermostats and Accessories	Description	Page
<b>ST10 and ST207</b>	Pre-set thermostats used with flexible heaters are available mounted to the heater or as a separate device used to control process.	<b>531</b>
<b>Bulb and Capillary</b>	Regulates temperature in non-critical applications within a preset range and cycles heaters on and off.	<b>534</b>
<b>Protective Wells</b>	Provides protection for thermostat bulbs and other sensors while directly immersed in process fluids.	<b>539</b>

# Thermostats and Accessories

## ST10 and ST207

### Temperature Sensors

Watlow® offers several styles of sensors for use with flexible heaters. These sensors are available as preset or adjustable thermostats, thermocouples, thermistors, RTDs or thermal fuses. They can be integrally mounted (encapsulated in silicone rubber) to sense the temperature of either the part or the heater sheath. The thermostats can also be ordered separate from the heater, allowing direct control of your process temperature, if desired.

### Pre-Set Thermostats

Several styles of non-adjustable, pre-set thermostats are available from Watlow. Thermostats separate from the heater are encapsulated in silicone rubber, and are available with standard 12 in. (305 mm) leads unless otherwise specified.

Thermocouples, thermistors, RTDs and thermal fuses are usually mounted to the heater under a vulcanized protective cap of silicone rubber sheath material. This drawing shows a typical mounting style for a thermocouple.

**Note:** Precise part temperature control with preset thermostats requires prototyping and field testing.

### Pre-Set Thermostats (Non-Adjustable)

Thermostat Model	Maximum Watts	Volts AC	Temperature Settings Available °F (°C)	Agency Approvals		
				UR	cUR	VDE
T-10	600/960	120/240	125-300±10 (50-149±5)	yes	yes	yes
T-207	1500	120/240	40/55±8 (4/13±4.4)	yes	yes	yes
	1500	120/240	60/75±8 (16/24±4.4)	yes	yes	yes
	1500	120/240	95/110±8 (35/43±4.4)	yes	yes	yes
	1500	120/240	145/160±8 (63/71±4.4)	yes	yes	yes

**Notes:**

- When ordering a pre-set thermostat separate from the heater, simply add the prefix **S** to the model number. (Example: ST-10) See next page.
- Snap action preset temperatures on the T-207 are close/open settings.
- T-10 thermostats are manufactured for specific preset temperatures. Available in 25°F increments.
- Other temperature ranges and voltages are available on special order. Minimum quantities apply, contact your Watlow representative before ordering.

# Thermostats and Accessories

## ST10 and ST207

### Temperature Sensors (Continued)

#### Separate Heater Accessories Available — Pre-Set Thermostats Separate From Heater

These are offered to allow direct control of your process temperature, so you're not limited to controlling only the heater temperature when using catalog heaters. Pre-set thermostats are encapsulated in silicone rubber with standard 12 inch leads.

The same temperature ranges, ratings and sizes are available on these thermostats. When ordering, add "S" prefix to the model number to indicate "separate" item. (Examples: ST-10 and ST-207)

Standard leads are 12 in. (305 mm) 18 gauge UL® 1180 black leads.

**Note:** For direct control of air temperature as is required in enclosure heating applications, specify thermostat model number ST-207E. This is a modified ST-207 mounted on  $\frac{1}{32}$  inch thick G-10 circuit board with the thermostat's metal cap exposed to sense air temperature.

# Thermostats and Accessories

## ST10 and ST207

### Thermostat Ordering Information

To order, complete the part number with the information below:

**Tstat Part #- 0 0**

\* Customer specified length must be noted in inches when ordering.

# Thermostats and Accessories

## Bulb and Capillary

Thermostats regulate temperature in non-critical applications. They sense temperature, within a preset range and cycle heaters on and off to maintain the set point.

Thermostats may be mounted inside a terminal enclosure or remote mounted (separate from the heater assembly). If using a remote mounted thermostat, be sure to order the sufficient capillary tube length to permit installation.

All Watlow thermostats are normally closed circuit and either single-pole, single-throw (SPST) or double pole, single-throw (DPST). They can be used with or without an enclosure.

Thermostat selection should be based on temperature range, capillary tube length and sensor bulb size (diameter/length).

## Remote Mount Thermostat Assemblies

Remote mounted thermostat assemblies can be supplied with the following enclosures:

- General purpose
- Moisture resistant
- Dust resistant

## Pilot Light

An optional pilot light gives visual indication whether the power supplied to the heating element(s) is on or off.

To order, please specify suffix part **PL11**.

## Thermostat Conversion Kits

Kits are available to convert a heater's general purpose terminal enclosure to accept either a single- or double-pole thermostat. The kit contains all the necessary parts to change out the existing terminal enclosure cover and mount the thermostat inside. These are **hardware and wiring kits** only.

**Single-pole conversion kit** covers 1, 1<sup>1</sup>/<sub>4</sub>, 2 and 2<sup>1</sup>/<sub>2</sub> inch NPT screw plugs. To order, specify part **K492-000-35-(thermostat type)**.

**Double-pole conversion kit** covers 2 and 2<sup>1</sup>/<sub>2</sub> inch NPT screw plugs. To order, specify part **K492-000-34-(thermostat type)**.

## Thermostat Dial Scales

Thermostats ship standard with Fahrenheit (°F) dial scales. If your application requires a Celsius (°C) scale, order the optional dial face.

All new single-pole thermostats, as well as dual-pole thermostats (4, 5A and 7A) will be provided with dual scale (both °C and °F). All other dual pole thermostats ship standard with Fahrenheit (°F) scales. If your application requires a Celsius (°C) scale, order optional dial face.

To order, specify code **CD**. Scale will match thermostat temperature range.

## Warning

Do not use thermostats for high-limit sheath protection. Thermostats fail in a closed circuit mode and will not cut power to the heaters. Limit control should be provided by an isolated, redundant sensor and control system of the appropriate type, design and installation.

Thermostats are pre calibrated at the factory. No adjustment, other than selecting the desired operating temperature, is required. All wiring should be performed by qualified personnel and comply with the National Electrical Code and other applicable state and local codes.

To help assure the correct thermostat is selected as well as installed and wired properly, here are a few helpful hints. Schematics are provided for interconnecting thermostats to single- and three-phase heaters.

# Thermostats and Accessories

## Bulb and Capillary

### Technical Information

#### Application Hints

- Locate the thermostat where ambient temperatures do not exceed 150°F (65°C).
- Mount the thermostat in an enclosure that is compatible with the surrounding environment.
- Immerse the entire sensing bulb in the media being heated.
- Make sure the sensing bulb is mounted away from the heating element(s) to negate any undue influence on the sensing bulb's temperature "reading."
- Keep the capillary tube insulated from electrical connections.
- Do not use a thermostat for high-accuracy temperature sensing. Use an appropriate thermocouple, RTD or thermistor and temperature control.
- Do not use thermostats as a primary power switching device. Use a disconnect switch or circuit breaker to cut power when servicing.
- Interconnect the thermostat to the heater only if:
  - The heater has one circuit
  - The heater's ampere draw is lower than the thermostat's rated ampacity at prescribed voltage.
- Interconnect either a single- or double-pole thermostat with a single-phase heater when the supply voltage does not exceed 250VAC for SPST or 480VAC for DPST.
- Only interconnect three-phase delta heaters to DPST thermostats.
- Use a single-pole thermostat for pilot duty where the thermostat is not interconnected with the heater, or heater exceeds the volt/amp rating.

### Ordering Information

#### Part Number

Thermostat Part Number	Enclosure (Remote Mount Only)	Options

#### Thermostat Part Number

**Note:** See chart on previous page.

#### Enclosure (Remote Mount Only)

S =	General purpose
W =	Moisture resistant
D =	Dust resistant

#### Options

CD =	Celsius dial scale (Double pole only)
CB =	Chrome bezel (Double pole only)
LTB =	Liquid-tight brass fitting ( $\frac{3}{8}$ in. - 18 NPT)
PL11 =	Pilot light, 120V only available on moisture/explosion resistant and explosion resistant enclosures

**Example Part Number:** 2 W LTB

# Thermostats and Accessories

## Protective Wells

Protective wells isolate and protect thermostat bulbs and other temperature sensors (thermocouples, RTDs or thermistors). They allow inserting the sensing element sufficiently into the media being heated without being damaged.

Steel or stainless steel protective wells are available in three lengths. They are supplied with 1/2 inch NPT mounting and 3/8 inch-18 NPT internal thread for mating to a liquid-tight bushing (LTB).

To order, specify the appropriate part number from the table below.

### Protective Wells

Plug and Thermowell Material	Immersed B Dimension		Part Number	Est. Ship. Wt.	
	in.	(mm)		lb	(kg)
Steel	12	(305)	<b>PWS12</b>	1	(0.5)

## Power Calculations

### Calculations for Required Heat Energy

The total heat energy (kWH or BTU) required to satisfy the system needs will be either of the two values shown below depending on which calculated result is larger.

A. Heat required for start up

B. Heat required to maintain the desired temperature

The power required (kW) will be the heat energy value (kWH) divided by the required start up or working cycle time. The kW rating of the heater will be the greater of these values plus a safety factor.

The calculation of start up and operating requirements consist of several distinct parts that are best handled separately. However, a short method can also be used for a quick estimate of heat energy required. Both methods are defined and then evaluated using the following formulas and methods:

### Short Method

Start-up watts = A + C +  $\frac{2}{3}$  L + safety factor

Operating watts = B + D + L + safety factor

Safety factor is normally 10 to 35 percent based on application.

A = Watts required to raise the temperature of material and equipment to the operating point, within the time desired

B = Watts required to maintain temperature of the material during the working cycle

C = Watts required to melt or vaporize load material during start-up period

D = Watts required to melt or vaporize load material during working cycle

L = Watts lost from surfaces by:

- Conduction-use equation to the right
- Radiation-use heat loss curves
- Convection-use heat loss curves

### Equation for A and B (Absorbed watts-raising temperature)

$$\frac{\text{lbs} \times C_p \times \text{°F}}{\text{hrs} \times 3.412}$$

- lbs = weight of material
- $C_p$  = specific heat of material (BTU/lb x °F)
- °F = temperature rise
- hrs = start-up or cycle time

### Equation for C and D (Absorbed watts-melting or vaporizing)

$$\frac{\text{lbs} \times \text{BTU/lb}}{\text{hrs} \times 3.412}$$

- lbs = weight of material
- BTU/lb = heat of fusion or vaporization
- hrs = start-up or cycle time

### Equation for L (Lost conducted watts)

$$\frac{k \times \text{ft}^2 \times \text{°F}}{\text{in.} \times 3.412}$$

- k = thermal conductivity (BTU x in./[ft<sup>2</sup> x °F x hr])
- ft<sup>2</sup> = surface area
- °F = temperature differential to ambient
- in. = thickness of material (inches)

# Reference Data

## Power Calculations

### Conduction and Convection Heating

#### Absorbed Energy, Heat Required to Raise the Temperature of a Material

Because substances all heat differently, different amounts of heat are required in making a temperature change.

The specific heat capacity of a substance is the quantity of heat needed to raise the temperature of a unit quantity of the substance by one degree. Calling the amount of heat added **Q**, which will cause a change in temperature  $\Delta T$  to a weight of substance **W**, at a specific heat of material **C<sub>p</sub>**, then  $Q = w \times C_p \times \Delta T$ .

Since all calculations are in watts, an additional conversion of 3.412 BTU = 1 Wh is introduced yielding:

#### Equation 1

$$Q_A \text{ or } Q_B = \frac{w \times C_p \times \Delta T}{3.412}$$

$Q_A$  = heat required to raise temperature of materials during heat-up (Wh)

$Q_B$  = heat required to raise temperature of materials processed in working cycle (Wh)

$w$  = weight of material (lb)

$C_p$  = specific heat of material (BTU/lb x °F)

$\Delta T$  = temperature rise of material ( $T_{\text{Final}} - T_{\text{Initial}}$ )(°F)

This equation should be applied to all materials absorbing heat in the application. Heated media, work being processed, vessels, racks, belts and ventilation air should be included.

**Example:** How much heat energy is needed to change the temperature of 50 lbs of copper from 10 to 70°F?

$$\begin{aligned} Q &= w \times C_p \times \Delta T \\ &= \frac{(50 \text{ lbs}) \times (0.10 \text{ BTU}/[\text{lb} \times \text{°F}]) \times (60\text{°F})}{3.412} = 88 \text{ (Wh)} \end{aligned}$$

#### Heat Required to Melt or Vaporize a Material

In considering adding heat to a substance, it is also necessary to anticipate changes in state that might occur during this heating such as melting and vaporizing. The heat needed to melt a material is known as the latent heat of fusion and represented by **H<sub>f</sub>**. Another state change is involved in vaporization and condensation. The latent heat of vaporization **H<sub>v</sub>** of the substance is the energy required to change a substance from a liquid to a vapor. This same amount of energy is released as the vapor condenses back to a liquid.

#### Equation 2

$$Q_C \text{ or } Q_D = \frac{w \times H_f}{3.412} \quad \text{OR} \quad \frac{w \times H_v}{3.412}$$

$Q_C$  = heat required to melt/vaporize materials during heat-up (Wh)

$Q_D$  = heat required to melt/vaporize materials processed in working cycle (Wh)

$w$  = weight of material (lb)

$H_f$  = latent heat of fusion (BTU/lb)

$H_v$  = latent heat of vaporization (BTU/lb)

**Example:** How much energy is required to melt 50 lbs of lead?

$$\begin{aligned} Q &= w \times H_f \\ &= \frac{(50 \text{ lbs}) \times (9.8 \text{ BTU}/\text{lb})}{3.412 \text{ BTU}/(\text{Wh})} = 144 \text{ (Wh)} \end{aligned}$$

Changing state (melting and vaporizing) is a constant temperature process. The **C<sub>p</sub>** value (from Equation 1) of a material also changes with a change in state. Separate calculations are thus required using Equation 1 for the material below and above the phase change temperature.

## Power Calculations

### Conduction and Convection Heating

#### Conduction Heat Losses

Heat transfer by conduction is the contact exchange of heat from one body at a higher temperature to another body at a lower temperature, or between portions of the same body at different temperatures.

#### Equation 3A—Heat Required to Replace Conduction Losses

$$Q_{L1} = \frac{k \times A \times \Delta T \times t_e}{3.412 \times L}$$

$Q_{L1}$  = conduction heat losses (Wh)

$k$  = thermal conductivity  
(BTU x in./[ft<sup>2</sup> x °F x hour])

$A$  = heat transfer surface area (ft<sup>2</sup>)

$L$  = thickness of material (in.)

$\Delta T$  = temperature difference across material  
( $T_2 - T_1$ ) °F

$t_e$  = exposure time (hr)

This expression can be used to calculate losses through insulated walls of containers or other plane surfaces where the temperature of both surfaces can be determined or estimated.

#### Convection Heat Losses

Convection is a special case of conduction. Convection is defined as the transfer of heat from a high temperature region in a gas or liquid as a result of movement of the masses of the fluid.

#### Equation 3B—Convection Losses

$$Q_{L2} = A \times F_{SL} \times C_F$$

$Q_{L2}$  = convection heat losses (Wh)

$A$  = surface area (in<sup>2</sup>)

$F_{SL}$  = vertical surface convection loss factor  
(W/in<sup>2</sup>) evaluated at surface temperature

$C_F$  = surface orientation factor  
heated surface faces up horizontally = 1.29  
vertical = 1.00  
heated surface faces down horizontally = 0.63

#### Radiation Heat Losses

Radiation losses are not dependent on orientation of the surface. Emissivity is used to adjust for a material's ability to radiate heat energy.

#### Equation 3C—Radiation Losses

$$Q_{L3} = A \times F_{SL} \times e$$

$Q_{L3}$  = radiation heat losses (Wh)

$A$  = surface area (in<sup>2</sup>)

$F_{SL}$  = blackbody radiation loss factor at surface temperature (W/in<sup>2</sup>)

$e$  = emissivity correction factor of material surface

#### Example:

We find that a blackbody radiator (perfect radiator) at 500°F, has heat losses of 2.5 W/in<sup>2</sup>. Polished aluminum, in contrast, ( $e = 0.09$ ) only has heat losses of 0.22 W/in<sup>2</sup> at the same temperature ( $2.5 \text{ W/in}^2 \cdot 0.09 = 0.22 \text{ W/in}^2$ ).

#### Combined Convection and Radiation Heat Losses

Some curves combine both radiation and convection losses. This saves you from having to use both Equations 3B and 3C. If only the convection component is required, then the radiation component must be determined separately and subtracted from the combined curve.

#### Equation 3D—Combined Convection and Radiation Heat Losses

$$Q_{L4} = A \times F_{SL}$$

$Q_{L4}$  = surface heat losses combined convection and radiation (Wh)

$A$  = surface area (in<sup>2</sup>)

$F_{SL}$  = combined surface loss factor at surface temperature (W/in<sup>2</sup>)

This equation assumes a constant surface temperature.

# Reference Data

## Power Calculations

### Conduction and Convection Heating

#### Total Heat Losses

The total conduction, convection and radiation heat losses are summed together to allow for all losses in the power equations. Depending on the application, heat losses may make up only a small fraction of total power required or it may be the largest portion of the total. Therefore, do not ignore heat losses unless previous experience tells you it is alright to do.

#### Equation 3E—Total Losses

$Q_L = Q_{L1} + Q_{L2} + Q_{L3}$  If convection and radiation losses are calculated separately. (Surfaces are not uniformly insulated and losses must be calculated separately.)

OR

$Q_L = Q_{L1} + Q_{L4}$  If combined radiation and convection curves are used. (Pipes, ducts, uniformly insulated bodies.)

#### Start-Up and Operating Power Required

Both of these equations estimate required energy and convert it to power. Since power (watts) specifies an energy rate, we can use power to select electric heater requirements. Both the start-up power and the operating power must be analyzed before heater selection can take place.

#### Equation 4—Start-Up Power (Watts)

$$P_s = \left[ \frac{Q_A + Q_C}{t_s} \frac{2}{3} (Q_L) \right] \times (1 + \text{S.F.})$$

$Q_A$  = heat absorbed by materials during heat-up (Wh)

$Q_C$  = latent heat absorbed during heat-up (Wh)

$Q_L$  = conduction, convection, radiation losses (Wh)

S.F. = safety factor

$t_s$  = start-up (heat-up) time required (hr)

During start up of a system the losses are zero, and rise to 100 percent at process temperature. A good approximation of actual losses is obtained when heat losses ( $Q_L$ ) are multiplied by  $2/3$ .

#### Equation 5—Operating Power (Watts)

$$P_o = \left[ \frac{Q_B + Q_D}{t_c} + (Q_L) \right] \times (1 + \text{S.F.})$$

$Q_B$  = heat absorbed by processed materials in working cycle (Wh)

$Q_D$  = latent heat absorbed by materials heated in working cycle (Wh)

$Q_L$  = conduction, convection, radiation losses (Wh)

S.F. = safety factor

$t_c$  = cycle time required (hr)

# Reference Data

## Power Calculations

### Conduction and Convection Heating

#### Radiant Heating

When the primary mode of heat transfer is radiation, we add a step after Equation 5.

Equation 6 is used to calculate the net radiant heat transfer between two bodies. We use this to calculate either the radiant heater temperature required or (if we know the heater temperature, but not the power required) the maximum power which can be transferred to the load.

#### Equation 6— Radiation Heat Transfer Between Infinite Size Parallel Surfaces

$$\frac{P_R}{A} = \frac{S (T_1^4 - T_2^4) \left(\frac{1}{e_f}\right) F}{(144 \text{ in}^2/\text{ft}^2) (3.412 \text{ BTU/Wh})}$$

- $P_R$  = power absorbed by the load (watts) - from equation 4 or 5
- $A$  = area of heater (in<sup>2</sup>) - known or assumed
- $S$  = Stephan Boltzman constant  
=  $0.1714 \cdot 10^{-8}$  (BTU/hr. sq. ft. °R<sup>4</sup>)
- $T_1$ (°R) = emitter temperature (°F + 460)
- $T_2$ (°R) = load temperature (°F + 460)
- $e_f$  = emissivity correction factor - see Emissivity Correction Factor information to the right
- $F$  = shape factor (0 to 1.0) - see Shape Factor for Radiant Application graph to the right

#### Emissivity Correction Factor (e)

$$e_f = \frac{1}{e_S} + \frac{1}{e_L} - 1 \quad \text{plane surfaces}$$

$$e_f = \frac{1}{e_S} + \frac{D_S}{D_L} \left(\frac{1}{e_L} - 1\right) \quad \text{concentric cylinders inner radiating outward}$$

$$e_f = \frac{1}{e_S} + \left(\frac{D_S}{D_L} \times \frac{1}{e_L}\right) - 1 \quad \text{concentric cylinders outer radiating inward}$$

$e_S$  = heater emissivity (from material emissivity tables)

$e_L$  = load emissivity (from material emissivity tables)

$D_S$  = heater diameter

$D_L$  = load diameter

#### Shape Factor for Radiant Application

#### For Two Facing Panels:

$$N = \left( \frac{\text{Heated Length}}{\text{Distance to Material}} \right)$$

$$M = \left( \frac{\text{Heated Width}}{\text{Distance to Material}} \right)$$

# Reference Data

## Power Calculations

### Conduction and Convection Heating

#### Power Evaluation

After calculating the start up and operating power requirements, a comparison must be made and various options evaluated.

Shown in the graph below are the start up and operating watts displayed in a graphic format to help you see how power requirements add up.

With this graphic aid in mind, the following evaluations are possible:

- Compare start up watts to operating watts.
- Evaluate effects of lengthening start-up time such that start-up watts equals operating watts (use timer to start system before shift).

- Recognize that more heating capacity exists than is being utilized. (A short start-up time requirement needs more wattage than the process in wattage.)
- Identify where most energy is going and redesign or add insulation to reduce wattage requirements.

Having considered the entire system, a reevaluation of start-up time, production capacity and insulating methods should be made.

**Comparison of Start Up and Operating Power Requirements**

## Equations

### Ohm's Law

**Volts**

$$\text{Volts} = \sqrt{\text{Watts} \times \text{Ohms}}$$

$$\text{Volts} = \frac{\text{Watts}}{\text{Amperes}}$$

$$\text{Volts} = \text{Amperes} \times \text{Ohms}$$

**Ohms**

$$\text{Ohms} = \frac{\text{Volts}}{\text{Amperes}}$$

$$\text{Ohms} = \frac{\text{Volts}^2}{\text{Watts}}$$

$$\text{Ohms} = \frac{\text{Watts}}{\text{Amperes}^2}$$

**Amperes**

$$\text{Amperes} = \frac{\text{Volts}}{\text{Ohms}}$$

$$\text{Amperes} = \frac{\text{Watts}}{\text{Volts}}$$

$$\text{Amperes} = \sqrt{\frac{\text{Watts}}{\text{Ohms}}}$$

**Watts**

$$\text{Watts} = \frac{\text{Volts}^2}{\text{Ohms}}$$

$$\text{Watts} = \text{Amperes}^2 \times \text{Ohms}$$

$$\text{Watts} = \text{Volts} \times \text{Amperes}$$

Wattage varies directly as ratio of voltages squared

$$W_2 = W_1 \times \left(\frac{V_2}{V_1}\right)^2$$

$$3 \text{ Phase Amperes} = \frac{\text{Total Watts}}{\text{Volts} \times 1.732}$$

## Wattage Requirements

The following equations can be used to make quick estimates of wattage requirements.

### For Steel

Use equation:

$$\text{kW} = \frac{\text{pounds} \times \text{temperature rise } (^\circ\text{F})}{20,000 \times \text{heat-up time (hrs.)}}$$

OR

$$\text{kW} = \frac{\text{kilograms} \times \text{temperature rise } (^\circ\text{C})}{5040 \times \text{heat-up time (hrs.)}}$$

### For Oil

Use equation:

$$\text{kW} = \frac{\text{gallons} \times \text{temperature rise } (^\circ\text{F})}{800 \times \text{heat-up time (hrs.)}}$$

OR

$$\text{kW} = \frac{\text{liters} \times \text{temperature rise } (^\circ\text{C})}{1680 \times \text{heat-up time (hrs.)}}$$

1 cu. ft. = 7.49 gallons

### For Heating Water in Tanks

Use equation:

$$\text{kW} = \frac{\text{gallons} \times \text{temperature rise } (^\circ\text{F})}{375 \times \text{heat-up time (hrs.)}}$$

OR

$$\text{kW} = \frac{\text{liters} \times \text{temperature rise } (^\circ\text{C})}{790 \times \text{heat-up time (hrs.)}}$$

1 cu. ft. = 7.49 gallons

### For Heating Flowing Water

Use equation:

$$\text{kW} = \text{GPM}^* \times \text{temperature rise } (^\circ\text{F}) \times 0.16$$

OR

$$\text{kW} = \text{liters/min.} \times \text{temperature rise } (^\circ\text{C}) \times 0.076$$

### For Air

Use equation:

$$\text{kW} = \frac{\text{CFM}^{**\textcircled{1}} \times \text{temperature rise } (^\circ\text{F})}{3000}$$

OR

$$\text{kW} = \frac{\text{cubic meters/min}^{\textcircled{1}} \times \text{temperature rise } (^\circ\text{C})}{47}$$

### For Compressed Air

Use equation:

$$\text{kW} = \frac{\text{CFM}^{**\textcircled{2}} \times \text{density}^{\textcircled{2}} \times \text{temperature rise } (^\circ\text{F})}{228}$$

OR

$$\text{kW} = \frac{\text{cubic meters/min}^{\textcircled{2}} \times \text{temperature rise } (^\circ\text{C}) \times \text{density (kg/m}^3\text{)}^{\textcircled{2}}}{57.5}$$

\* Gallons per minute

\*\* Cubic feet per minute

<sup>①</sup> Measured at normal temperature and pressure

<sup>②</sup> Measured at heater system inlet temperature and pressure

# Reference Data

## Wattage Requirements

### Kilowatt-Hours to Superheat Steam

1. Plot points on lines **P**, **Q** and **S**. **P** represents the inlet temperature (and saturation pressure) of the system.  
**Q** represents the liquid content of the water vapor.  
**S** indicates the outlet temperature minus the saturated temperature.  
**W** indicates the heat content of the water vapor.
  2. Draw a straight line from **P** through **Q** to **W**. Read **W<sub>1</sub>**.
  3. Draw a straight line from **P** through **S** to **W**. Read **W<sub>2</sub>**.
  4. Required watts = Weight (lbs) of steam/hour x (W<sub>2</sub>-W<sub>1</sub>)
- Watt density is critical. Review temperature and velocity prior to heater selection.

#### Example Shown:

Q = 90% quality (% R.H.)  
P = 75 psig  
S = 320°F

### Superheat Steam

## Tubular Elements and Assembly Selection Guide

Watlow® tubular elements and assemblies are primarily used for direct immersion in water, oils, viscous materials, solvents, process solutions and molten materials as well as air and gases.

Additionally, round and flat surface tubular elements (WATROD™ and FIREBAR® heaters respectively) can be used for surface heating.

WATROD and FIREBAR heating elements may be purchased separately, or fabricated into process heating assemblies, including:

- Screw plug
- Flange
- Circulation
- Booster
- Engine preheater
- Over-the-side
- Vertical loop
- Drum
- Duct

Both elements and assemblies are available from stock. They can be configured with a variety of watt and volt ratings, terminations, sheath materials and mounting options to satisfy the most demanding applications.

If our stock products do not meet your application needs, Watlow can custom engineer the optimum heater.

### Performance Capabilities

- Sheath temperatures up to 1800°F (983°C)
- Assembly wattages to 3 megawatts
- Process assembly ratings up to 3000psi
- Watt densities up to 120 W/in<sup>2</sup> (18.6 W/cm<sup>2</sup>)
- Enhanced performance beyond these specifications is available upon request
- Watlow can design thermal systems to meet specific performance criteria. Contact your local Watlow representative for assistance.

### Features and Benefits

#### 53 standard bend formations

- Enables designing of the heating element around available space to maximize heating efficiency

#### FIREBAR flat surface geometry

- Enhances heat transfer in both immersion and air applications and also surface heating
- Increases surface area per linear inch allowing heaters to run cooler in viscous materials

#### Wattages from 95 watts to 3 megawatts (on individual elements and assemblies respectively)

- Makes tubular heaters one of the most versatile electric heating sources available

### Typical Applications

- Liquids
- Air
- Gases
- Molten materials
- Contact surface heating
- Radiant surface heating

# Reference Data

## Tubular Elements and Assembly Selection Guide

The following two charts will help you select an appropriate heater based on your application and watt density restrictions. These charts are application driven. The total wattage required by your application should be known before selecting a specific heater type(s) from the stock tables. If your required wattage is not known, please contact your Watlow representative.

Once the heater type has been identified, turn to the appropriate product section for information on the element or assembly.

### Element and Assembly Selection Guide

To identify the tubular heater type best suited to your application, consult the *Element and Assembly Selection Guide*.

In most cases Watlow recommends using single tubular heating elements for low kilowatt applications.

Assemblies are better suited for large kilowatt applications to heat liquids, air or gases.

When selecting a heater according to watt density, be sure to consider the following:

- Liquid viscosity at start up and at process temperature
- Operating temperature
- Chemical composition

Under the “**Heating Method**” column in the *Element and Assembly Selection Guide* locate the method that applies to your application to find the recommended “Heater Type.”

After identifying the heater type(s) suitable for your application, refer to the *Supplemental Applications Chart* for further application data. This chart will assist you in selecting the appropriate watt density and sheath material for your specific application. It also presents the performance characteristics for both WATROD and FIREBAR elements.

### Element and Assembly Selection Guide

Application	Heating Method	Heater Type
<b>Liquids:</b>		
Acids	Direct immersion (circulating/non-circulating)	FIREBAR, WATROD, screw plug, flange, over-the-side, vertical loop and pipe insert
Caustic soda 12% concentrate 10% concentrate 75% concentrate	Direct immersion (circulating/non-circulating)	WATROD, screw plug, square flange, flange, over-the-side, vertical loop, circulation and pipe insert
Degreasing solutions	Direct immersion (circulating/non-circulating)	FIREBAR, WATROD, screw plug, square flange, flange, over-the-side and pipe insert
Electroplating	Direct immersion (circulating/non-circulating)	FIREBAR, WATROD, screw plug, square flange, flange, over-the-side, drum, vertical loop and pipe insert
Ethylene glycol 50% concentrate 100% concentrate	Direct immersion (circulating/non-circulating)	FIREBAR, WATROD, screw plug, flange, over-the-side, circulation, booster and engine preheater
Oils Asphalt Fuel oils Light grades 1 and 2 Medium grades 4 and 5 Heavy grade 6 and Bunker C Heat transfer Lubricating SAE 10, 20, 30 SAE 40, 50 API STD 614 Vegetable (cooking)	Direct immersion (circulating/non-circulating)	FIREBAR, WATROD, screw plug, square flange, flange, over-the-side, drum, vertical loop, circulation, booster and pipe insert
Paraffin or wax	Direct immersion (circulating/non-circulating)	FIREBAR, WATROD, screw plug, square flange, flange, over-the-side, drum and pipe insert

### Supplemental Applications Chart

This *Supplemental Applications Chart* is provided in addition to the *Element and Assembly Selection Guide*. This chart will help you select watt density and sheath materials for either WATROD or FIREBAR heating elements according to the specific media being heated.

For example, if you are heating vegetable oil, either WATROD or FIREBAR elements at 30 and 40 W/in<sup>2</sup> respectively (4.6 and 6.2 W/cm<sup>2</sup>) with 304 stainless steel, sheath can be used.

### Supplemental Applications Chart

WATROD™ and FIREBAR® Element and Assemblies .....563

# Agency Certifications, Recognition and Approvals

## WATROD and FIREBAR® Element and Assemblies

### Agency Recognition

UL® and CSA recognition information charts are provided to ensure:

- Safety parameters in relationship to stated voltage and amperage
- Approved sheath materials, end seals and assembly electrical enclosures

Watlow believes that UL® and CSA recognition information is necessary to confirm the reliability of our heating products in relationship to your application. As such, the accompanying *Agency Recognition* charts illustrate the extent of coverage each heater type provides. Specific end use application information is required for each agency marking. Some products carry U.S. and Canada approvals.

### UL® Recognition and Listing

#### File Number E52951 (UL® 499) – Component Recognition

All information for UL® File #E52951 can be found in the UL® Directory, Volume 2 under “Heaters Miscellaneous” (Classification KSOT2).

#### Elements (Volume 2, Section 1)

WATROD Diameter		Allowable Part Numbers	Max. Volts	Max. Watt Density		Min. Bend Radius	Allowable Sheath Materials	End Seal Types
in.	(mm)			W/in <sup>2</sup>	W/cm <sup>2</sup>			
0.210	(6.0)	<b>RK</b> series	<b>U0-xx</b>	250	①	①	Nickel alloy 400, 600, 800, 840, 800H, 304, 316 SS, Steel, Titanium, Copper coated steel, Hastelloy C22, C276	Epoxy resin, Lavacone, Silicone resin, Silicone rubber, Silicone fluid, Ceramic potting
0.260	(6.6)	<b>RA</b> series	<b>U1-xx</b>	250				
0.315	(8.0)	<b>RB</b> series	<b>U3-xx</b>	480				
0.375	(9.5)	<b>RD, RS</b> series	<b>U5-xx</b>	480				
0.430	(10.9)	<b>RC</b> series	<b>U6-xx</b>	600				
0.475	(12.0)	<b>RG</b> series	<b>U7-xx</b>	600				
0.490	(12.4)	<b>RJ</b> series	<b>U8-xx</b>	600				

① Dependent on application, contact your Watlow representative.

**Note:** All end seal types apply to all diameter heaters.

#### Elements (Volume 2, Section 6)

MULTICOIL Diameter		Allowable Part Numbers	Max. Volts	Max. Watt Density		Min. Bend Radius	Allowable Sheath Materials	End Seal Types
in.	(mm)			W/in <sup>2</sup>	W/cm <sup>2</sup>			
0.375	(9.5)	<b>U5M</b> series	①	①	①	Nickel alloy 800, 840, 304, 316 SS, Steel, Titanium	Epoxy resin, Silicone resin, Silicone rubber, Lavacone, Ceramic potting, Silicone fluid	
0.430	(10.9)	<b>U6M</b> series						
0.475	(12.0)	<b>U7M</b> series						
0.490	(12.4)	<b>U8M</b> series						

① Dependent on application, contact your Watlow representative.

**Notes:** All end seal types apply to all diameter heaters.

UL® and CSA must be requested at the time order is placed.

## WATROD and FIREBAR Element and Assemblies

### UL® Recognition and Listing (Continued)

#### Elements (Volume 2, Section 4)

FIREBAR Height in. (mm)	Allowable Part Numbers	Max. Volts	Max. Watt Density W/in <sup>2</sup> W/cm <sup>2</sup>	Min. Bend Radius		Allowable Sheath Materials	End Seal Types
				Major Axis in. (mm)	Minor Axis in. (mm)		
<b>Air or Immersion Heating</b>							
5/8 (16)	<b>FA, FS series A-xx</b>	480	①	1 (25)	①	Nickel alloy 800, 840, 304 SS	Epoxy resin, Lavacone, Silicone resin, Silicone rubber, Silicone fluid, Ceramic potting
1 (25)	<b>FB, FS series</b>	480		1 (25)			
<b>Liquid Immersion Heating Only</b>							
5/8 (16)	<b>FA, FS series U-xx</b>	480	①	1 (25)	①	Nickel alloy 800, 840, 304 SS	Epoxy resin, Lavacone, Silicone resin, Silicone rubber, Silicone fluid, Ceramic potting
1 (25)	<b>FB, FS series</b>	480		1 (25)			

① Dependent on application, contact your Watlow representative.

**Notes:** All sheath materials and end seal types apply to all diameter heaters.  
UL® and CSA must be requested at the time order is placed.

### Assemblies

Refer to applicable WATROD and FIREBAR elements for maximum voltage, watt density and sheath materials.

Heater Type	Allowable Part Numbers	Electrical Enclosure Options
Screw Plug	All catalog models <b>B</b> Series <b>U1</b> to <b>U9</b>	General purpose or moisture resistant with or without thermostat (Type "3" thermostat excluded)
Flange	All catalog models <b>FE, FG, FH, FK, FL, FM, FN, FO, FP, FR, FS, FT, FW</b> —Series <b>U1</b> to <b>U9</b>	General purpose or moisture resistant with or without thermostat (Type "3" thermostat excluded)
Circulation	All catalog models <b>CB, CF, CP</b> Series <b>U1</b> to <b>U9</b>	General purpose or moisture resistant with or without thermostat (Type "3" thermostat excluded)
Over-the-Side	All catalog models <b>OL</b> and <b>OR</b> Series <b>U1</b> to <b>U9</b> , except <b>U2</b> and <b>U4</b>	Moisture resistant with or without thermostat
Duct	All catalog models <b>D6</b> to <b>D125</b> , <b>MDH6</b> to <b>MDH60</b> , <b>LDH9</b> to <b>LDH225</b> Series <b>U1</b> to <b>U9</b> and <b>U0</b>	General purpose enclosure only

## Part Number Index

### How To Use This Index

This easy cross reference contains the alpha or numeric prefixes for all Watlow product part numbers contained in this catalog. The spaces (\_) shown in some of the following prefixes indicate additional characters.

**Note:** Some part numbers include a suffix alpha character. This is the last alpha character that appears in the product part number.

# Terms and Conditions of Sale

## Quantity and Weights:

Products purchased and sold hereunder shall be those for which buyer submits an order which is accepted by Watlow®. Watlow's quantities shall govern unless proved to be in error. On orders for products carried in stock, Watlow will deliver the ordered quantity specified. However, in the manufacture of products it is agreed that Watlow will be allowed production losses. Watlow shall have the right to manufacture, deliver and invoice for partial deliveries of products as stated below:

Quantity Ordered	Delivery Variation
1-4	No variation
5-24	± 1 unit
25-74	± 2 units
75-99	± 3 units
100+	± 3 percent

SERV-RITE® Insulated

Wire and Cable ± 10 percent

XACTPAK® Sheathed Wire ± 10 percent

**Note: Watlow will deliver exact quantities on products with a net price of \$100.00 or more. If buyer expressly requests no variation in delivered quantity of products with a total net price under \$100.00, a ten percent (10%) surcharge will be added to the net billing on the invoice for such order.**

## Delivery:

FCA (Incoterms® 2010) - Watlow's Pickup Plant. Risk of loss and title transfer pass to buyer on delivery at the FCA point. Watlow shall prepay freight, assure the shipment and select the means of transportation unless buyer provides specific written instructions otherwise with buyer's order. Watlow shall not be bound to tender delivery of any quantities for which buyer has not given shipping instructions. Watlow shall be entitled to designate from time to time the locations from which buyer may receive or pick up products.

## Payment Terms:

Terms are net 30 days from date of invoice with approved credit. Prices and discounts are subject to change without notice. All quotations are valid for 30 days unless otherwise stated.

## Restocking Charges:

Stock heaters, controllers, sensors and accessories which have not been used or modified may be returned to the relevant Watlow plant for a twenty percent (20%) restocking charge. For Watlow's Hannibal plant products only, modified-stock products may be returned if not permanently modified, for a minimum thirty percent (30%) restocking charge. All stock and modified-stock products require Watlow's prior authorization to be returned and must be returned within one hundred twenty (120) days from the date of delivery. Controllers may not be returned if the packaging seal is broken. Non-stock (custom) heaters, controls, sensors and accessories are not returnable.

## Price Revision:

Prices are subject to change without advance notice. If Watlow desires to revise the discounts, prices, points of delivery, service allowances or terms of payment but is restricted to any extent against so doing by reason of any governmental request, law, regulation, order or action, or if the discounts, prices, points of delivery, service allowances or terms of payment then in effect are altered by reason of governmental request, law, regulation, order or action, Watlow shall have the right (i) to terminate this order by notice to buyer, (ii) to suspend deliveries

for the duration of such restriction or alteration or (iii) to have applied to this order (as of the effective date of such restriction or alteration) any discounts, prices, points of delivery, service allowances or terms of payment governmentally acceptable. Any delivery suspended under this section may be canceled without liability.

## Return Policy:

Prior approval must be obtained from the relevant Watlow plant to return any product. Watlow will assign a return authorization number and record the reason for the return. Watlow will examine returned product to determine the actual cause, if any, leading to buyer's return. If product has a manufacturing defect, Watlow, in its sole discretion, may issue a credit for the returned product or repair or replace with like product. If returned product is not subject to Watlow's warranty, buyer will be notified of the estimated cost of repair, if possible. Thereafter, buyer must advise Watlow whether or not buyer chooses to have product repaired at buyer's expense.

## Order Changes:

Buyer must notify Watlow in writing of requested changes in the quantity, drawings, designs or specifications for products which are ordered but not yet in the process of manufacture. After receipt of such notice, Watlow will inform buyer of any adjustments to be made in price, delivery schedules, etc. resulting from buyer's requested changes prior to incorporating requested changes into manufactured products. Controller products require written notice of requested changes not less than sixty (60) days prior to last scheduled shipping date.

## Freight and Taxes:

Prices do not include prepaid freight, federal, state or local taxes. Any increase in freight rates paid by Watlow on deliveries covered by this order and hereafter becoming effective and any tax or governmental charge or increase in same (excluding any franchise or income tax or other tax or charge based on income) (i) increasing the cost to Watlow of producing, selling or delivering products or of procuring products used therein or, (ii) payable by Watlow because of the production, sale or delivery of products, such as Sales Tax, Use Tax, Retailer's Occupational Tax, Gross Receipts Tax, Value Added Tax (VAT), and Ways Fees may, at Watlow's option, be added to the prices herein specified and be added to invoices.

## Engineering Charge:

On complex products, systems or controller software modifications, an engineering charge shall be applied or included in the price of prototypes. This charge is not subject to discounts.

## Tooling:

All tooling and fixtures are the property of Watlow. Watlow will accept buyer's special tooling if sent freight prepaid. Watlow will maintain this tooling, exercising reasonable care, in order to produce buyer's products. Permanent molds for aluminum cast-in and polymer products shall be the property and responsibility of buyer.

## Cancellation Charges:

There will be no cancellation charge for non-modified stock products. Non-stock and modified-stock products may be subject to a cancellation charge to be determined by Watlow depending upon the portion of product completed at the time of such cancellation.

# Terms and Conditions of Sale

## **Excuse of Performance:**

(A) Deliveries may be suspended by either party in the event of: Act of God, war, riot, fire, explosion, accident, flood, sabotage; lack of adequate fuel, power, raw materials, labor, containers or transportation facilities; compliance with governmental requirements (as hereinafter defined); breakage or failure of machinery or apparatus; national defense requirements or any other event, whether or not of the class or kind enumerated herein, beyond the reasonable control of such party; or in the event of labor trouble, strike, lockout or injunction (provided that neither party shall be required to settle a labor dispute against its own best judgment); which event makes impracticable the manufacture, transportation, sale, purchase, acceptance, use or resale of products or a material upon which the manufacture of products is dependent. (B) If Watlow determines that its ability to supply the total demand for products, or obtain any or a sufficient quantity of any material used directly or indirectly in the manufacture of products, is hindered, limited or made impracticable, Watlow may allocate its available supply of products or such material (without obligation to acquire other supplies of any such products or material) among itself and its purchasers on such basis as Watlow determines to be equitable without liability for any failure of performance which may result therefrom. (C) Deliveries suspended or not made by reason of this Section shall be canceled without liability, but this agreement and/or order shall otherwise remain unaffected.

## **Prototypes:**

If buyer orders and/or Watlow delivers a product designated as a "prototype", no guarantees, warranties or representations as to fitness for a particular purpose or merchantability are made with respect to such prototype. Buyer shall have the duty and sole responsibility to test a prototype prior to acceptance and/or incorporation into end-use applications. Further, a production product based on a prototype design may differ in assembly methods and materials from the prototype. Buyer, therefore, shall have the duty and sole responsibility for testing and acceptance of production products which are based on prototype designs.

## **Warranty and Limitation of Liability:**

Watlow warrants its products against defects in material and workmanship for at least one (1) year (three (3) years on some controls) from the date of delivery, provided such product is properly applied, used and maintained. Refer to the express written warranty time period for each individual product or contact the relevant Watlow plant for such warranty time period information. Watlow does not warrant any product against damage from corrosion, contamination, misapplication, improper specification or wear and tear and operational conditions beyond Watlow's control. The terms of this warranty are the exclusive terms available to buyer and to any other person or entity to whom products are transferred during the period of this warranty. No person has authority to bind Watlow to a representation or warranty other than this express warranty. Watlow shall not be liable for incidental or consequential damages resulting from the use of products whether a claim for such damages is based upon warranty, contract, negligence or other cause of action. Should any product fail while subject to this warranty, such product shall be repaired or a substitute product shall be provided, at Watlow's option, at no charge to buyer or to any other person or entity to whom product is transferred during the period of this warranty.

Watlow must be notified of the alleged failure of product within thirty (30) days of such event and advanced authorization for repair or replacement must be obtained in writing from Watlow. **THIS WARRANTY IS MADE EXPRESSLY IN LIEU OF ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING WITHOUT LIMITATION, ANY WARRANTY ARISING FROM A COURSE OF DEALING OR USAGE OF TRADE, AND ALL OTHER SUCH WARRANTIES ARE SPECIFICALLY EXCLUDED. THE CORRECTION OF ANY DEFECT IN OR FAILURE OF PRODUCTS BY REPAIR OR REPLACEMENT TO THE EXTENT SET FORTH ABOVE, SHALL BE WATLOW'S LIMIT OF LIABILITY AND THE EXCLUSIVE REMEDY FOR ANY AND ALL LOSSES, DELAYS OR DAMAGES RESULTING FROM THE PURCHASE OR USE OF THE PRODUCTS. IN NO EVENT SHALL WATLOW BE LIABLE FOR SPECIAL, INDIRECT, INCIDENTAL OR CONSEQUENTIAL DAMAGES. WATLOW SHALL NOT BE LIABLE FOR, AND BUYER AND ANY OTHER PERSON OR ENTITY TO WHOM PRODUCTS ARE TRANSFERRED DURING THE PERIOD OF THIS WARRANTY ASSUMES RESPONSIBILITY FOR, ALL PERSONAL INJURY AND PROPERTY DAMAGE RESULTING FROM OR RELATED TO THE HANDLING, POSSESSION OR USE OF PRODUCTS AND PRODUCTS MANUFACTURED AND SOLD BY WATLOW HEREUNDER.**

## **Miscellaneous:**

THE VALIDITY, INTERPRETATION AND PERFORMANCE OF THIS AGREEMENT AND/OR ORDER AND ANY DISPUTE CONNECTED HERewith SHALL BE GOVERNED AND CONSTRUED IN ACCORDANCE WITH THE LAWS OF THE STATE OF MISSOURI. These Terms and Conditions constitute the full understanding of the parties, a complete allocation of risks between them and a complete and exclusive statement of the terms and conditions of their agreement and/or order relating to the subject matter herein. Except as otherwise expressly provided herein, no conditions, usage of trade, course of dealing or performance, understanding or agreement and/or order purporting to modify, vary, explain or supplement the terms or conditions of this agreement and/or order shall be binding unless hereafter made in writing and signed by the party to be bound, and no modification shall be effected by the acknowledgment or acceptance of any purchase order or shipping instruction forms containing terms or conditions at variance with or in addition to those set forth herein. No waiver by either party with respect to any breach or default or of any right or remedy and no course of dealing or performance shall be deemed to constitute a continuing waiver of any other breach or default or of any other right or remedy, unless such waiver be expressed in writing signed by the party to be bound. If any term, condition or provision of this agreement and/or order or the application thereof is judicially or otherwise determined to be invalid or unenforceable, or if the parties mutually agree in writing to any revision of this agreement and/or order, the remainder of this agreement and/or order and the application thereof shall not be affected, and this agreement and/or order shall otherwise remain in full force and effect.

Rev. 11/07/11
